### How to work out consumption requirements:

SUM of Device Watts ÷ 1000 = Kilo Watts (kW)

Volts (V) = Always 230V (Std in S.A.)

Watts (W) = Amps (A) x Volts (V)

Amps (A) = Watts (W) ÷ Volts (V)

### Remember:

Electric motors require a minimum power source of up to 3 x their rating to start!

(Add any "Startup" Watts to the total SUM of your consumption requirements.)

### Refer to the chart below to estimate which Red Rhino Generator you will need

PLEASE NOTE: This is only a guide, please consult your generator manual. Red Rhino will not be held responsible for any damages and loss.
