Method Summary:

1ml of sample was taken with the pipette and diluted to 10ml with IPA, this was diluted further in Methanol to give an expected sample concentration of 100 mg/ml.

The sample was analysed on an Agilent HPLC with a DAD detector. The system was calibrated using standard solutions of eleven cannabinoids. Cannabinoid concentrations in the sample were determined using the relevant calibration lines.

The results are presented in Table 1 and Figure 1 below.
