

TIPS: HOW TO CONNECT SPEAKER WIRE TO A BINDING POST

Binding posts are one of most common ways of connecting speakers to amplifiers. Installation is simple in four easy steps.

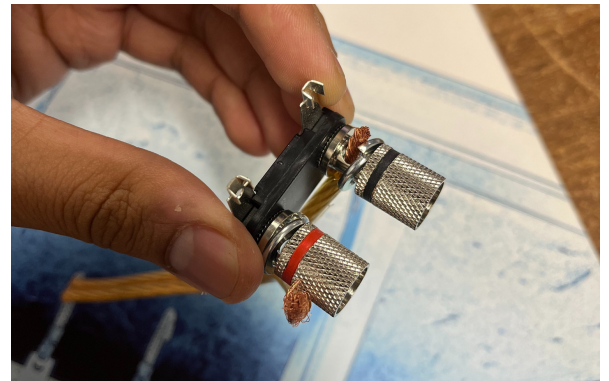

STEP 1:

Take your speaker terminal and unscrew the caps covering the binding post until you see a small hole through its center. The caps are usually colored with red and black representing the polarity of the terminals respectively.

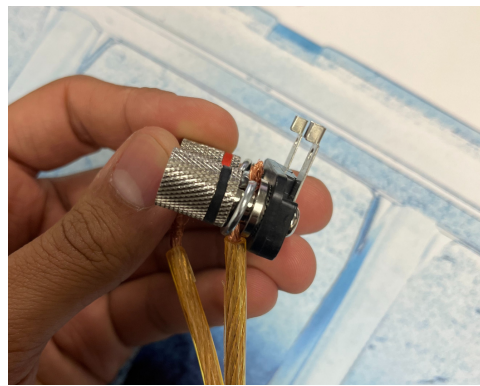

STEP 2:

Twist the bare speaker wire to create a single strand as shown in the figure. Note: Make sure it is twisted like the top wire.

STEP 3:

Insert the wire into the exposed hole. Note that the silver ring is before the wire and not after it.

STEP 4:

Now tighten the cap to secure the wire in the post. Make sure it gets lock by the silver ring.

Similarly, do for the other binding terminal. And you are done! Simple and easy.

SOME POOR WAYS OF INSTALLING WIRE
