

# Desert Garden

## Planting Instructions

### Sow indoors: all year round

Fill plant cell half way with the prepared coir. Add a few seeds per cell and cover over with the remaining coir. Locate to a warm place and cover with a plastic bag to create humidity. Water when needed. As soon as the seedlings appear, remove the bag and relocate to a warm windowsill. Do not water if the soil is already damp – let it dry out between waterings instead.

### Transplanting

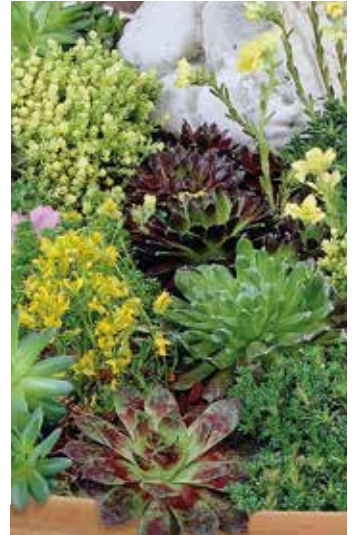

When seedlings are large enough to handle they can be transplanted in to larger pots. Use a fork or spoon to gently tease out individual seedlings, taking care not to damage the roots. Fill around the seedling with compost and water sparingly.

## Succulent

### Mixture

This pretty succulent mixture will creep and spread over time, ideal for growing between cactus varieties.

Succulents lovesunlight so keep them in a sunny position where they will thrive.

## Giant

### Western Cactus

Typically found in the Mexican deserts, this cactus will reach heights of up to 20 meters, making it the largest cactus variety in the world.

Stems can reach up to 1 metre in diameter and will produce multiple branches.

## Golden

### Barrel Cactus

The golden barrel cactus is native to central Mexico and is most commonly found on volcanic slopes.

This variety is one of the most popular cactus varieties for growing from seed or cultivating from cuttings.

## Miniature

### Cactus Mixture

This cute little collection of mini cactus varieties are ideal for growing indoors and creating a miniature cactus display.

Some varieties will produce flowers once established in shades of yellow and pink.

## Clumping

### Barrel Cactus

This barrel cactus will grow in a cluster and will form a mound of thick rigid shoots.

The cactus will be densely armed with rigid yellow and red spikes and can reach heights of up to 1 metre.
