

# 100% Recycled

## Pronto Seed Eco-Kit

Thank you for choosing Pronto Seed's Eco-Kit!

Our seed kits...

- are easy to use
- contain the highest quality seeds
- are 100% recyclable
- contain 100% recycled plastics

For more information about this seed kit please visit our website [www.plentyofbang.co.uk](http://www.plentyofbang.co.uk).

# Getting Started

## Preparing The Coir

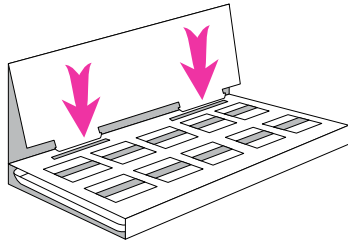

You will need...

- a waterproof container
- approx 150ml water
- 5 coir disks (included in this kit)

Simply place the coir disks into a waterproof container. Add the water and leave to absorb. The coir will expand to 3 times its original size. Once the coir has stopped expanding, stir it round to ensure there are no hard lumps. If you need to extra water do this a little at a time.

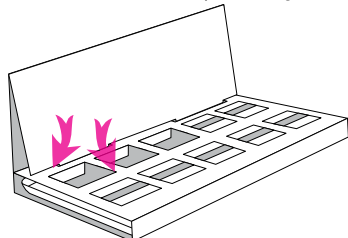

### Stage 3

Slide tabs into internal slots so that they anchor securely into position.

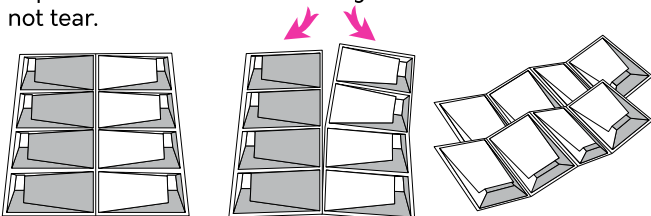

### Stage 4

Fold down the flaps where the cells will go. Doing this now will make it easier to insert the planting cells later.

### Stage 5

Your plant cells come in flat sheets of two that need to be separated. Take care when doing this so that the cells do not tear.

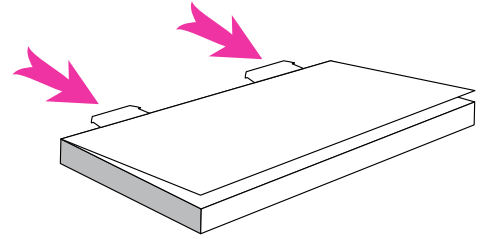

# Assembling

## Your Eco-Kit

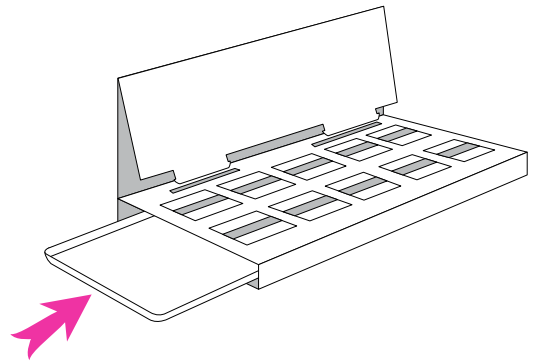

### Stage 1

Slide tabs out carefully so they are not damaged.

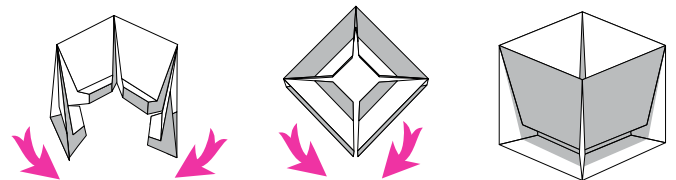

### Stage 2

Insert the drip tray into your stadium.

### Stage 6

To create the planting cells, gently fold the 4 panels into a square with the tabs facing inwards.

### Stage 7

Slot the planting cells into your stadium. You are now ready to start growing.
