

# CAN YOU SPOT ALL THE DINOSAUR ECCS? $\Omega$ 

Answers on the last page Parasaviolophus

## IALOSAURUS

She was a herbivore and used her strong back legs to reach higher branches. Her large head crest was used for 'trumpeting' and calling out to her family. The dinosaur specie name is pronounced 'para-saw-ro-lofus'.

Arlo was a large, carnivore (meat-eater). His hind legs were long and powerful. His arms, although strong, were much shorter. His' feet had three clawed toes, and a smaller claw further up the foot.

## TRAZ

## IRICERATOPS

## TYRANNOSAURUS REX

Traz and his family were herbivores. So, they ate plants and not meat. They would have wandered the grassy plains on all fours in large herds, like buffalo or cows do today. Triceratops means ' $\mathbf{3}$-horned-face' in Greek.

# HOW MANY DID you find? - 

THERE ARE 8 EGGS IN TOTAL 8
