

# SIZING

Sizing can vary from style to style which means you may not wear the same size in all your shoes. Below are some size conversion charts which offer some general guidelines for converting your size to another scale as well as approximate lengths of the feet each size is intended to fit. Both feet should be measured, as most people have one foot which is larger than the other. It's also a good idea to measure your feet at the end of the day as they are usually slightly larger at that time. Please keep in mind length is only one dimension. Feet are three-dimensional, so width and thickness of the feet should also be considered.
