XL Motorized Screen
Technical Sheet

XL Motorized Screen

The XL Motorized screen is a robust system to protect your outdoor living space from the elements. Operated with a wireless remote control, you can open and close very large openings up to 20' wide by 13' high. Your space easily transforms from an open, airy shelter to a completely enclosed room.

Textilene SuperScreen™ by Twitchell

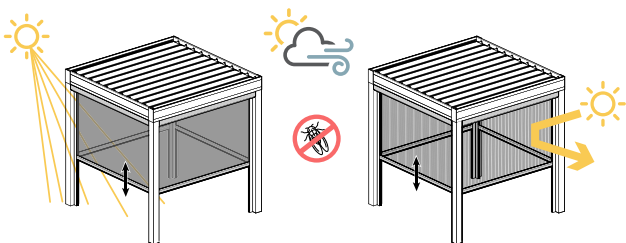

- Superior strength vinyl coated polyester
- Excellent visibility with 50 or 60% openings
- Ideal protection against bugs and insects
- Light protection against wind, preserving a comfortable outdoor sensation
- Available only in black for maximum transparency

Soltis 86 by Serge Ferrari

- Entirely made of PVC, offering superior stability
- Shade with micro-perforations with only 14% openings
- Excellent shade to protect from the sun, the wind and the rain
- Increased heat retention inside your outdoor living space
- Available in 4 colors

System Operation

The XL Motorized Screen system is equipped with a tubular motor integrated inside an aluminum winding tube. The motor can be connected to a standard electrical outlet (110 volts) connected to your home. The screen is inserted into side slides using a zipper mechanism that provide a lateral seal against insects.

Types of Installations

Wall Installation

Installing the XL Motorized Screen on the front beam allows the aluminum boxes and slides to be installed on the face of the beam and columns of the existing

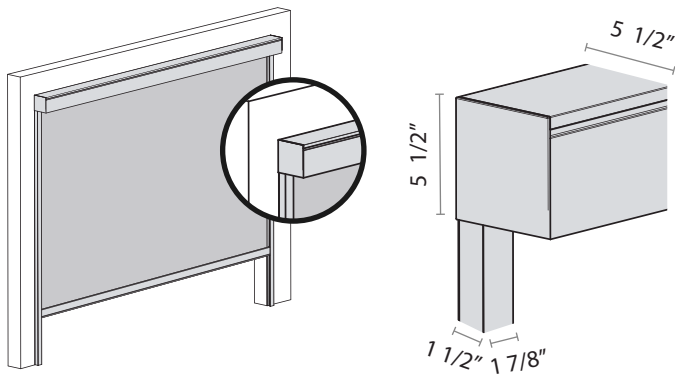

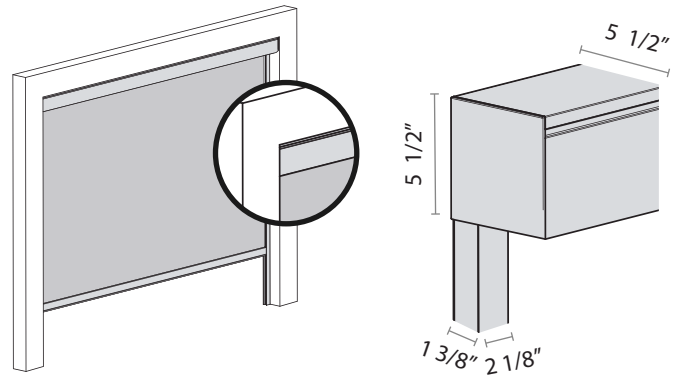

Table Installation

Reveal mounting allows the housing to be installed under the roof beam and the slides to be installed inside the columns.

Aluminum Frame Color

Order a color sample to perfectly match with your house exterior.

Remote Control

A remote control allows precise and effortless control of the opening and closing of the screen. This remote control communicates with the tubular motor by radio frequency up to a distance of 300 feet.
