XL Pergola
Technical Sheet

XL Pergola

Think Big. Terra Summer's XL Pergola makes outdoor living come together in a big way. Whether freestanding or anchored, the XL Pergola not only gives you year-round control over the elements, but - more importantly - adds big value to any outdoor living space. How big? Up to 291 square feet, with an impressive 10' ceiling height. Made from corrosion-resistant aluminum, both the frame and the louvers require virtually no maintenance and carry our 10-year Terra Summer Warranty*. Available options include matching motorized floor-to-ceiling screens and shades and sleek, powerful Infratech frame-mounted heaters. The Terra Summer Color Selector lets you match - or mix - frame and louver colors from any one of 12 contemporary hues.

Key Features

100% aluminum structure for durability and easy maintenance

Extruded double-walled blades for extra resistance to heavy loads

Two 2.3 A / 110 V motorized cylinders

Blades can be rotated vertically up to 115 degrees

Maximum size of a module 14'9" (wide) X 19'8 3/4" (projection)

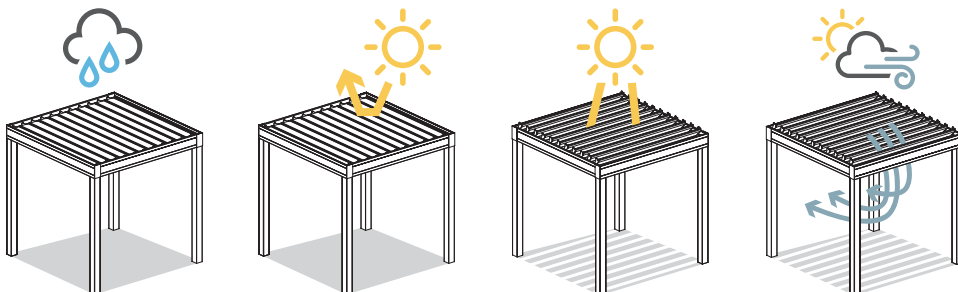

Total waterproofing against rain

Integrated gutter system

Control of luminosity and air flow

Sleek and modern design

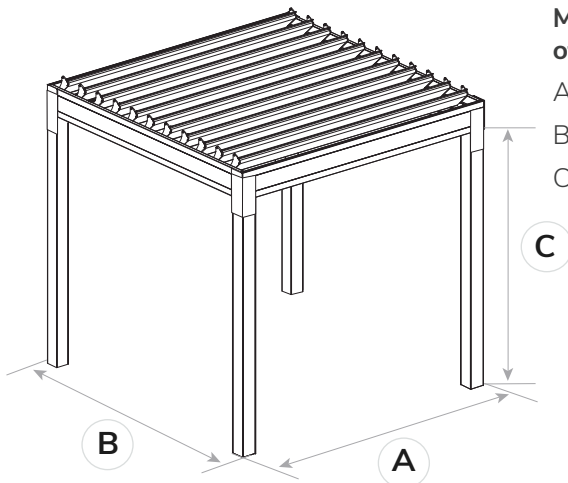

Modular concept allows multiple configurations

* For detailed Warranty information, go to the WARRANTY section on our website.

Freestanding Installation

As a stand-alone in your backyard, the XL Pergola can be made up of one or more modules to accommodate your requirements.

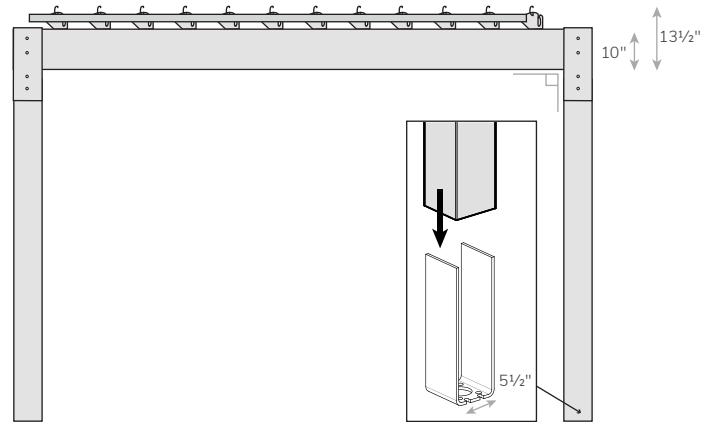

Maximum size of one module:

A - Width: 14' 9"

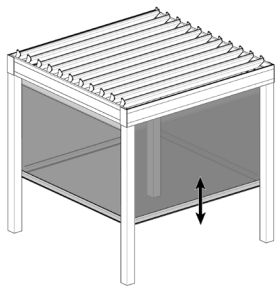

B - Projection: 19' 8 3/4"

C - Height: 10'

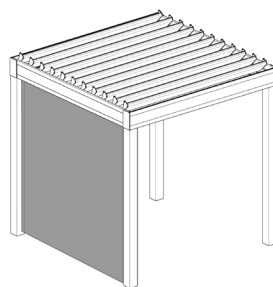

Popular Configurations

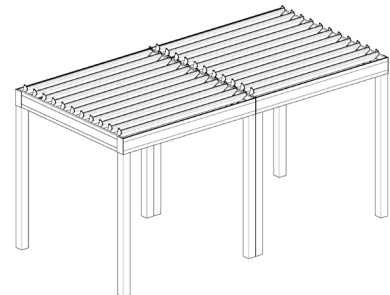

The XL Pergola fits perfectly with other Terra Summer's products for the complete or partial closure of lateral openings.

XL Motorized Screen

Fixed Screen

Two modules side by side

Frame and blade color

Customers may combine different colors for the structure and the blades. To perfectly match with your house exterior, visit our online store to place an order for color samples.

Remote Control

Adjust the degree of opening of the blades and modulate the brightness of the LED lighting. This remote control communicates with the cylinder for the orientation of the blades or with the LED lighting system by radio frequency up to a distance of 300 feet.

LED Lighting

As an option, we can equip your XL Pergola with LED lighting integrated into the structure, thus extending the use of your covered outdoor area in the evenings.
