## CARE AND CLEANING

### SAFETY FIRST

To ensure proper cleaning and/or disinfecting, it's important to consult with facilities or safety personnel and follow the manufacturer's instructions—including detailed dilution requirements, safe application instructions, dwell time for effective disinfecting and more.

Per CDC instructions, always read and follow the directions on the label to ensure safe and effective use.

- Wear skin protection and consider eye protection for potential splash hazards
- Ensure adequate ventilation
- Use no more than the amount recommended on the label
- Use water at room temperature for dilution (unless stated otherwise on the label)
- Avoid mixing chemical products
- Label diluted cleaning solutions
- Store and use chemicals out of the reach of children and pets

Always read and follow the directions on the cleaner/disinfectant labels to ensure safe and effective use.

### CLEAN + DISINFECT

Cleaning and disinfecting are two distinct actions, and knowing the difference between the two can help promote safety in any space. This comprehensive, 2-step process requires cleaning before disinfecting.

### CLEAN

#### CLEANING REMOVES GERMS

- The act of removing visible dirt and debris from objects or surfaces
- Cleaning works by using soap/detergent with water to remove impurities from surfaces either manually or mechanically
- Cleaning does not kill germs, but by removing them, it lowers their numbers and risk of spreading infection

#### CLEANING GUIDELINES AND TIPS

- Start by lightly dusting with a soft, grit-free cloth or chamois (no wiping)
- After dusting, dampen cloth or chamois with a solution of mild, non-abrasive liquid soap and water
- Wipe clean and dry with a soft, grit-free cloth, sponge or chamois
- Avoid using abrasive cleaners and steel wool to prevent scratching
- Test any cleaning method or agent in an inconspicuous area of the surface

### DISINFECT

#### DISINFECTING KILLS GERMS

- This process comes after a surface is cleaned
- Disinfecting kills germs on objects or surfaces with the use of chemicals
- Most common disinfectants include one of the following active ingredients: Quaternary Ammonium (Quats), Sodium Hypochlorite (Bleach), Hydrogen Peroxide, or 70% Isopropyl Alcohol
- EPA-registered disinfectants List N: Disinfectants for Use Against SARS-CoV-2

#### DISINFECTING GUIDELINES AND TIPS

- Follow the disinfectant manufacturer's instructions when applying the agent
- Once finished, remove all disinfecting agents from the surface with water and a grit-free, then dry
- If not properly removed, disinfectant residue could degrade product life and appearance

# CARE AND CLEANING

## CLEANING OUR HARD SURFACES

Over 95% of the hard surfaces on our products can be cleaned/disinfected using any one of the four primary ingredients listed below.

- Bleach (Sodium Hypochlorite)
- Hydrogen Peroxide
- Quaternary Ammonium Compounds (Quats)
- 70% Isopropyl Alcohol

### EXAMPLES OF HARD SURFACES THAT CAN BE DISINFECTED:

- Plastics (i.e. polyurethane and acrylic)
- Solid surface
- Metals
- Painted Surfaces
- Laminate

### EXCEPTIONS:

- Veneer
- Wood Surfaces

## CLEANING OUR SOFT SURFACES

Our textiles and meshes offer a performance and cleaning story unmatched in the industry.

### MESH:

- All of our mesh materials are bleach-cleanable. This determination is supported by 3rd-party results from completing AATCC 188 Colorfastness to Bleach testing where the subject material is submersed, and friction stirred in a diluted sodium hypochlorite solution.
- Cleaning of these materials varies. Check out the [Mesh Spec + Care Guide](#) on our website for more information.

### SEATING FABRICS:

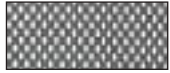

- Soft surfaces on seating can vary widely from woven, knits and leather to coated textiles such as vinyl and polyurethane. Woven and knits tend to be more permeable than vinyl or polyurethane.
- Cleaning of these materials varies. For a list of our textile spec + care guides, see the [Materials Downloads](#) on our website.
