CryoSpa Sport: Daily Maintenance

1. Daily: Check Chlorine Levels.
Minimum is 1 ppm. Add chlorine direct if necessary.
2. Daily: After use, wipe the CryoSpa above the water level with a sponge and baking soda to remove foam and prevent scum line.
3. Daily: Check the Water Level.
Water Level must always be ABOVE the bottom of the skim weir.
4. Daily: Add a little Anti-Foam as required to reduce foaming (optional).
5. Daily or Every Other Day (depending on usage): Check Cartridge Filters.
Rotate with clean ones if necessary. Clean the used ones and leave to dry, or use disinfectant e.g. chlorine and rinse thoroughly before leaving it dry. Then they are ready for the next use.
6. When used daily, leave the Chiller running constantly.
7. Check the Chiller AIR Inlet and AIR Outlet are not blocked.
The chiller should not be blocked in any way and should not be used to dry towels.
NEVER sit on the chiller!
8. Weekly or Every 2 Weeks: Check the front of the chiller for fluff and remove if necessary.
9. Weekly or Every 2 Weeks (depending on usage):
Drain the CryoSpa (switch OFF first!).
Clean, add fresh water and add salts with the measuring jug as follows:

4kg Regular Salt (PDV Salt / NaCl) and
6kg Epsom Salt (MgSO₄)

IMPORTANT:
Only use Food Grade or 100% Pure Grade Salts for the CryoSpa Sport.
Don't add salts to the ThermoSpa.
