Product Description —

Got a hilly play area that is too steep for standard playground equipment? The 6-Foot Single Straight Embankment Slide is here to save the day. The slide uses the hill as a natural ladder. There's no need for a separate climbing structure, which means you're saving money right off the bat, both on the unit itself and on installation costs. Kids will be sliding down and immediately climb up the hill for round two. Another advantage of being close to the ground at all points is that you don't have to stress over high-drop accidents like you would with traditional slides. The slide is steep enough to give the kids a thrill, but it evens out at the bottom for a safe landing. The wide, decorated entryway at the top and high walls of the slide further add to the safety of this slide. Commercial-grade plastic has been used in the slide's construction which keeps it smooth and sturdy for years to come. A range of custom finishes are also available.
