James P. Roemer
aka Dr. Weather

Commodity Trading Advisor/Meteorologist
BestWeatherInc.com

OBJECTIVE & SUMMARY

Weather has a multi-trillion dollar annual effect on the global economy. I have a unique talent of not only being able to forecast short and longer term weather trends that can impact grains, natural gas and many other commodities, but also a solid understanding of the psychology and technical analysis in futures and options trading.

I also have developed a unique in house commodity software called *Climate Predict* which uses teleconnections such as Sea Ice, El Nino, La Nina and more to predict weather and crop conditions around the world. My program has helped hedge funds, major food companies and farmers predict weather trends and on coming global disasters months in advance.

With over 35 years experiencing as an agricultural and energy meteorologist and market analyst, I have advised major U.S. hedge funds, hundreds of farmers and commodity traders in natural gas, soft commodities and grains.
