

Galactomune®

Immune-supportive prebiotic formula†

Galactomune® is a prebiotic fiber supplement that combines galactooligosaccharides (GOS) together with beta-glucan to provide targeted support for gastrointestinal function and a healthy immune response.†

Promotes a healthy and balanced microbiota†

A diverse population of probiotic bacteria colonizes the gastrointestinal tract and plays an important role in health and immune function. By serving as a food and energy source for these beneficial bacteria, prebiotics support the growth and activity of a healthy intestinal microbiota.† Galactomune® provides a rich source of galactooligosaccharides (GOS), a type of prebiotic found in human and cow milk that has been shown to support growth of healthful *Bifidobacterium* and *Lactobacillus* species in the gut.†

Supports a healthy immune response†

By promoting a healthy balance of intestinal microbiota, prebiotics support the development and maintenance of a healthy immune system.† GOS and beta-glucan, a soluble fiber with prebiotic activity, have also demonstrated immune supportive properties.† Both ingredients support the body's innate immune response and adaptive function to unfavorable environmental stimuli and bacteria.†

Supports healthy intestinal bacterial balance†

Healthful intestinal bacteria ferment prebiotics, such as GOS into short-chain fatty acids. These short-chain fatty acids beneficially increase intestinal acidity (lower pH), which helps to create an inhospitable environment for unfavorable bacteria.† Beta-glucan may additionally support a healthy immune response to a wide spectrum of bacteria and yeast.†

- Viable alternative to chicory-based prebiotics
- Easy to administer powder and capsule options
