Method: R-Biopharm RIDASCREEN Gliadin competitive kit R7021 (R5-Antibody)

Limit of Reporting/Quantitation: 10 ppm (mg/kg) Gluten

The R5 antibody detects gliadin (wheat), secalin (rye) and hordein (barley)

To convert gliadin in gluten a conversion factor of 2 is usually used. However this factor strongly depends on the sample analysed, especially for starches (the higher the degree of washing the higher the proportion of glutelins in the sample; in such cases the conversion factor is larger than 2 and the gluten concentration accordingly higher)
