

POLARIS RZR170 GAS PEDAL EXTENDER

Thank you for purchasing the LSR 2" gas pedal extender for the RZR170. You can install the extender without removing the throttle cable or electrical. First remove the 3 OEM bolts. Pull the gas pedal assembly away from the bracket. Be careful the spring will be under tension. Next slide the new bolts through the pedal and re install the spring loosely on to the pedal. Be sure the hook is grabbing the pedal. Next slid the extender onto the bolt and re insert them onto the bracket. As you are going towards the bracket you can push the long arm of the spring under the stock mount. This will re tension the pedal. You may need to straighten out the steel portion of the cable slightly to take pressure off the cable. Check cable for free movement and make sure nothing is binding. If you wish to use the throttle stop. You can insert an 8mm X 80mm bolt with a nut into the stock hole.

Pre Assembly

Spring tensioned under OEM mount

Check cable from binding
