

RZR XP TURBO S  
SUSPENSION INSTALL NOTES

# TRAILING ARM SPACER SETUP

These images show the drivers side looking forward from just behind pivot.

?Between 16" TO 17.5"

Use this configuration if your ride height is between 16.5" and 17.5"  
Medium spacer on outside and medium spacer on inside.

Use this configuration if your ride height is less than 15.5"  
Small spacer on outside and large spacer on inside.

?Less than 16"

Use this configuration if your ride height is more than 18"  
Large spacer on outside and small spacer on inside.

?More than 17.5"

Measuring ride height from this point—in this case just under 16.5"

# Caliper bushings

Bushings are installed with the shoulder side against the caliper

# Rod end notes

- front lower outer 7/8 rod end distance = 1.875" from shoulder to center of pivot.
- front lower inner 3/4 rod end distance = 1.75" from shoulder to center of pivot.
- front upper inner 3/4 rod end distance = 1.75" from shoulder to center of pivot.
- trailing arm 3/4 rod end distance = 2" from shoulder to center of pivot.
