2. Examination:

2.1. Legal basis:

- §30 StVZO (until June 2016)
- §35a (1), (2), (5), (6), (7), (8), (9), StVZO (until June 2016)
- §35b StVZO in accordance with directive BMV / StV 13/36.25.01-12 du 26.05.86 VkB1. 1986, p. 303 (until July 2006)
- Examination further to the ECE-R-14 regulations, including all the modifications until the amendment 07 (the cabin seats do not have to be tested considering the ISOFIX fixation system)
- Examination in accordance with directive 76/115/CEE of the 18.12.1975, including every modification until N° 2005/41/CE
- Examination in accordance with ECE-R-17 regulations, including every modification until amendment 08
- Examination in accordance with directive 74/408/CEE of the 22.07.1974, including every modification until N° 2006/96/CE
- Examination in accordance with ECE-R-21 regulations, including every modification until amendment 01, with supplement 03
- Examination in accordance with directive 74/60/CEE of the 17.12.1973, including every modification until N° 2000/4/CEE
- Examination in accordance with ECE-R-25 regulations, including every modification until amendment 04
- Examination in accordance with directive 78/932/CEE of the 16.10.1978, including every modification until N° 2006/96/CE
- Examination in accordance with directive 77/541/CEE of the 28.06.1977, including every modification until N° 2006/96/CE
- Examination in accordance with ECE-R-16 regulations, including every modification until amendment 06, Suppl. 06
- Tolerance of the measures according to DIN 7168, April 1991

The tests were performed for each category of vehicle referred under respective point 3.2 below of this report. The vehicles category must be read in the respective vehicle approvals, including vehicle category M1, M1G, N1, N1G, N2, N2G.

Part of the vehicle : Car seat
Type : see point 1.3
Enquirer : SCOPEMA SARL
F – 87150 Oradour sur Vayres

2.2. Measures' review

: The controlled seats and swivels comply with the demands required by the examinations mentioned above.

The measurement of the H point of the seat has been done according to the appendix 3 of the ECE-R-17 regulations, on a three-dimensional measuring system.

The locations of the H point, of the slope of the seat-back and of the attachment point of the belt correspond to R point, to the slope of the seat-back decreed by the construction and the limits authorized by the effective attachment point in the authorized tolerances.

Moreover, it has been observed that the seats and swivels can be adjusted in order that R point and the inclination of the back match the original R point, and the inclination of the backrest conforms to the one predicted for the original equipment of the vehicle.

The height of the headrest is 800 mm higher to R point. The space between the top point of the backrest and the headrest corresponds with the standards of the examination. The radius also meets the requirements.

The seat meets the requirements of driving cab seats.

2.3. Resistance tests

The fixations of seats and swivels have not been tested in the vehicle. All static and dynamic tests were carried out on rigid test platforms.

The ISOFIX fixation systems are not part of the tests basis.

Part of the vehicle : Car seat
Type : see point 1.3
Enquirer : SCOPEMA SARL
F – 87150 Oradour sur Vayres

2.3.1. Static tests

: The seats and swivels have been tested in the following areas: resistance of the belt anchorage points, resistance of the backrest, of its levers, of its recline and breaking point of the headrests.

The seats and swivels that have been tested meet the requirements of resistance-tests mentioned above.

2.3.2. Dynamic tests

: The seats (with extension of the seat and armrests) and swivels have been tested regarding the resistance of the seats fixations and their control levers, their locking (20 G test) and also the resistance to headrests restraint.

The seats and swivels that have been tested meet the requirements of resistance-tests.

2.4. Tests concerning the vehicle

: The seats and swivels have been tested regarding the installation in the vehicle, in compliance with its use. Likewise, the fixations and locations of belts fixation, just as their installation, have been tested.

The seats and swivels that have been tested meet the requirements of the tests mentioned above.

Part of the vehicle : Car seat
 Type : see point 1.3
 Enquirer : SCOPEMA SARL
 F – 87150 Oradour sur Vayres

3. Field of use :

3.1. General remarks :

The use of vehicles with registration of the European Community can differ from the initial use of the type of use registered on the registration certificate below point 3.

3.2. Vehicle classification:

Enquirer : SCOPEMA SARL
F – 87150 Oradour sur Vayres

3.3. Remarks:

1a – The original floor mat has to be removed to put the SCOPEMA base.

2a – While fitting a seat instead of a passenger benchseat, the belt strand has to be in central position.

2b – The central belt strand has to be fixed to the seat by a strap (in such a way as to be usable with one hand only)

2c – The original belt buckle must be fixed on the SCOPEMA belt fixing plate which is specific to the vehicle in question.

3a – The RIB swivel is not allowed on the driver's side on comfort versions (with high handbrake)

3b – Use of the swivel only after lowering the handbrake fixing on the original base

3c – Possibility to use the swivel only after changing the plastic design of the original seat according to SCOPEMA's recommendations.

3d – To be able to turn the seat by using the swivel, the handbrake must be lowered; the vehicle must be guaranteed against involuntary departure, i.e. by means of blocks.

3e – The adaptation of the handbrake ACAFMTC has to be used.

Brake function is thereby omitted, there are no additional checks of the braking effect required.

3f - Handbrake lever must be assembled at SCOPEMA Bock; Brake function is thereby omitted, there are no additional checks of the braking effect required.

3g- If the hand brake has been modified at the factory so that the fitting can be the same on the driver's side and the passenger's side (lever at least 35mm lower), the front passenger seat swivel (RHD) can be used for the driver's seat (LHD).

4a – When using a swivel with the locking handle in forward position, the original adjustment sliders' lever must be folded so that it does not hurt the swivel.

4b – The locking lever of the original sliders must be folded, so that it does not collide with the seat and work correctly when the seat is slid back.

5a – Washers (3mm height) must be installed at the fixing points, under the swivel, in the vehicles with a spare battery below the seat.

5b – The rear nuts of the original bases' covers must be removed.

5c – The battery cover of the original base must be cut on the sides, in order to place correctly the raiser on the base.

Part of the vehicle : Car seat
Type : see point 1.3
Enquirer : SCOPEMA SARL
F – 87150 Oradour sur Vayres

3.3. Remarks:

5d- The height adjusting system must be blocked with the help of specific parts provided by the manufacturer – see appendices, point 2.5.

6a – The work changes made on pretensioner for seat belts can only be performed by specialized and authorized staff according to the regulation of explosive material. .

An original invoice, as a proof, will have to be presented (*German national regulation*)

6b – When a double passenger seat is replaced by a single one, the pretensioner for seat belt that is not used must be fixed on the base at the place planned by the manufacturer. An assembly instruction must be provided by the seat manufacturer.

Deleting this pretensioner is not part of this technical report.

6c – The electrical cable of the motion sensor of the seat must be guided not only on the upper plate, but also on the lower plate, so that it won't be stuck during the different adjustments or swiveling of the seat.

6d – The electrical cables that bind the seat to the car body must be guided not only on the upper plate, but also on the lower plate, so that it won't be stuck during the different adjustments or swiveling of the seat.

7a – Only for vehicles with an OEM height adjustment

7b – Not for vehicles with lateral air bags.

7c- Not for vehicles with seats on suspended base

7d- Not for vehicles produced with lateral airbags in the seats

7e- Not for vehicles produced with OEM swivels

7f- Not for original seats with original ISOFIX anchorage points

Part of the vehicle : Car seat
 Type : see point 1.3

5 Summary:

The seats and swivels named above meet the requirements of the tests listed above and can be assembled in the vehicles.

The seats that equip the vehicles, and that have been tested according to the examinations named above cannot be modified.

In the event that a vehicle manufacturer or importer has a certificate to confirm that the type of the vehicle has a national authorization for use (i.e. with a right hand drive), the examination included in this report can be transmitted, for all that the use of the individual seats corresponds to the same fixation to the vehicle's floor, the same geometry of the belts and the same H point.

This technical report is for information only, it cannot be legally opposable.

The report, made up of pages 1 to 42 just as all the appendices listed under point 4, cannot be copied without written permission of the exam lab.

Copies are only valid if they have the official stamp and the original signature of the registrant or applicant.
