

All of our mantels are handcrafted from beams which are salvaged from historic homesteads and agricultural buildings throughout the upper midwest. Dakota Timber is committed to helping you bring American history into your home!

Floating Mantel Instructions

Our Steel Mantel Brackets are made locally in Fargo and allow for a fast and easy DIY install.

Up to a 300 pound load rating is achieved when 8 - 2.5" screws are attached stud/backer direct!

Learn more at DakotaTimberCo.com

Step 1.

You will need a level, stud-finder, screwdriver (#2 square) & adhesive.

Step 2.

Mark stud locations on wall using your stud-finder & a pencil.

Step 3.

Place bracket on wall at desired location & check for level.

Step 4.

Once level, use provided 2.5" screws and drive into stud locations - 2 screws per stud location is required.

Step 5.

Required for permanent, solid install: Insert @ 1 oz. of construction adhesive into each hole.

Step 6.

With even pressure slide the mantel onto the bracket. If additional support is needed, "toe-nail" using 6" trim screws from top, back edge of the mantel into wall at stud locales.
