CODING WITH ODIS

Please note:

The procedure described below for encoding and enabling the trailer mode only serves for a general orientation and can vary greatly depending on the model (motorisation / equipment). If necessary less or further control units will have to be adapted.

After connecting to ODIS, the "69 trailer function" controller has to be set to encoded in the target installation list.

The following may be necessary in the further course of work:

EZE_09 (electronic central electric controller):

Diagnosis (possible login code: 31347) Networking plan Controller self-diagnosis Encode Trailer connection device or: hitch_ecu

Alternative encoding EZE_09 as follows (MY 2017 >>): Self diagnose control unit Access authorization >31347 Adjustment Integration Trailer control unit > installed

ZKS_46 (Central module convenience system) trailer monitoring >put on active trailer control unit >installed

SWA_3C (Lane Change Assist) ECU for draw bar >with ECU for draw bar

SW2_CF (Lane Change Assist2) ECU for draw bar >with ECU for draw bar SCH_17 (Dash panel insert) Trailer >yes

RFK_6C (reverse camera system) equipment_ahk >installed

STF_74 (chassis control system) Trailer >installed

EPH_76 (PDC controller) Trailer >trailer device can be removed manually

DIS_13 (controller distance control (possible login code: 20103) Control module for towing sens >installed

Alternative encoding DIS_13 as follows: Self diagnose control unit Access authorization >20103 Encoding

Binary encoding Byte 3 Binary >xxxx1xxx or Hex >+8

FFF_A5 (front sensor system controller) AAG >coded

HDE_6D (boot lid electronics controller) Trailer >installed

Important note on encoding and activating in trailer mode The aforementioned settings are carried out in the

The aforementioned settings are carried out in the vehicle's electrical system and saved locally. During general updates for the vehicle software (for example, within the scope of service or repair work), the settings may be overwritten and deleted under certain circumstances. In this case, the trailer mode activation has to be updated again locally after the update. Diagnostic information relating to the trailer mode that may appear during variance comparisons with the data saved in the manufacturer's works, may form the basis of the local activation.
