

# CRAFTSMAN BIRD FEEDER

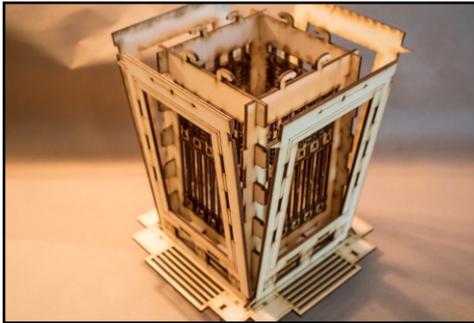

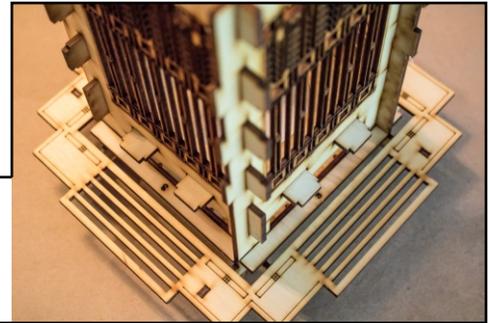

Start with 4 windows and the 2 bottom pieces. Match up (1) and (2) to build a box.

Loosely line up the windows until all 4 pieces connect. Fit the pieces snug to square up

Lay in part (3) & (4) around the bottom to fill the gap between the windows and outer sides.

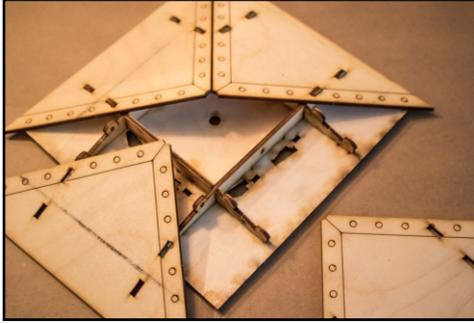

Place the outer sides (5) down in their slots around the square base.

Fit the 4 sides carefully down until they are seated and the slots line up with the windows.

Work the outer sides into their slots to hold snug. Fit the square ring (6) over the top.

Build the lid. Add the ribs (7) & (8) to the top plate. NOTE: label side down.

Snap on all 4 roof tops to the ribs. Fit the eye hook through the top and add bolt below.

Lights can be snaked through the top before adding the bolt for a clean finish.

Attach the roof by dropping it down over the locks at an angle and twist to lock.

Keep the feeder safe from the outdoors with a couple coats of exterior spray poly.
