

Parts List:

- A - x2 Large Size Ring
 - B - x2 Middle Size Ring
 - C - x2 Small Size Ring
 - D - x1 Top Lock Ring
 - E - x1 Bottom Lock Ring
 - F - x2 Sealed Loop Rib
 - G - x2 Hook Loop Rib
- Not Pictured:
- H - x1 Wire Hanger
 - I - x1 Teallight Candle

The Basics..

The Firefly Luminairie is made up of 14 parts in a complete kit. It was designed for ages above 8 years old. Although glue is not required, you may choose to make the frame more stable by permanently assembling the pieces with a bead of glue in all the fittings. (You should follow the order of the instructions carefully if so, as some parts might not be able to be assembled out of order).

Feel free to add any finish you want to the bare wood. A sealer for outdoors would be required. Paint or stain should work well. You might consider doing all the finish work before beginning to assemble the parts. A light sanding will help make a smoother finish too.

Lining them up:

Take x2 of each of the middle rings, Parts (A, B, & C) and line up in the grooves of one Part (F) Rib. The order is crucial for the lantern to come together properly.

Support the rest:

Bring in the next Part (F) Rib on the opposite side of the last. This will take some patience to line up the grooves just exact. Take care not to force any parts. The next two parts (x2 G) will go on the last 2 sides, opposite of each other. They will slide in much easier. There may be an order of which rib goes first according to your own taste, just as long as it ends up looking like the photo here.

Lock the top:

Drop on the Top Ring, Part (D), over the 4 support ribs to lock them together.

Snap on the bottom:

Flip the lantern over to lock on the bottom ring, Part (E). The 4 square holes have a slight "V" shape to the cut. It will slip on easier when flipped up in the right direction. (might not be obvious at first.) Take care not to push too hard. You might wiggle the ribs back and forth, or use a pen to reach inside and push back.

Add the hanger:

Loop the wire hanger, Part (H) through the Ribs, Part (F). If you prefer to string the lights together on a line, the other ribs, part (G) might work out better.

Tie them up:

Now they are ready to hang. Use string or thread to group them in the right position under branches, or string them together in a line. For windy evenings, you might consider rolling thin paper, or clear film to slip down inside and keep the flames going. Use caution around melted wax and open flames with children. Keep it safe!
