

CAERNARFON CASTLE

DEKORGRIP RESIN BOUND

BEHIND THE SCENES:

DekorGrip Resin Bound was perfect for the job, due to its durability and aesthetics. Through close communication and planning, 3000m² was delivered and laid within a very short timescale.

With various uncommon challenges laid out for this project, DekorGrip's expertise and knowledge were used to work out the best solution for the job. DekorGrip worked closely with the contractors to ensure this project was completed to the highest standard. The site was such a success that it ended up winning the ICE Sustainability Award.

SOLUTION:

DekorGrip Resin Bound was perfect for the project at hand, as it provided a hardwearing material that could be laid in a short amount of time, and at a depth to suit the application and traffic requirements. The selection of several colours of aggregate was also a benefit to the project, with Barley Beach, Sandringham and a specially created blend of Black Basalt (used in the creation of stunning nautical shapes and route markings). DekorGrip helped with the time and delivery issues that the contractor faced. Through close communication and planning, 3000m² was delivered and laid in a very short timescale allowing the promenade to be reopened to the public in time for the Easter Holidays.

SUMMARY:

With various challenges laid out at the start of the project, it was quickly established that along with a resin bound stone surface, the expertise and knowledge of the DekorGrip team was required. The surface suited the historic backdrop perfectly and provided a sustainable surface that would also withstand the challenging conditions of regular contact with salt water. In addition, the variety of stone blends that can be supplied by DekorGrip allowed creativity to flow and made for an aesthetically pleasing finish, with minimum difficulty. The site was such a success that it received the ICE 2015 Sustainability Award.

- DekorGrip Resin Bound
- Sandringham
- Barley Beach
- Special blend of Black Basalt
