

HAMPSHIRE TERRACE

DEKORGRIP RESIN BOUND

THE NEED:

A major connecting walkway between the University of Portsmouth and the city centre was in major need of refurbishment. Wear and tear was becoming a major issue, so the rejuvenation of the surrounding areas was paramount.

The old surface consisted mainly of tarmac and paving slabs. The deterioration had created many trip hazards, whilst visually there was nothing to bring the whole area together.

SOLUTION:

DekorGrip Resin Bound was selected as the primary solution, with Natural Wicker the desired blend. In order to create a more bespoke and beautiful finish, the Coral Flair blend was selected to be laid in a ribbon shape through the middle of the design.

SUMMARY:

The DekorGrip Resin Bound was used to great effect to upgrade the whole area, with different colours weaving through the centre of the pavement. Designed to provide a pleasant surrounding for gathering students, the surface was also warmly welcomed by local businesses as it created a far better seating area for their customers.

SYSTEMS USED:

- DekorGrip Resin Bound
 - Natural Wicker
 - Coral Flair
