

TIPNER PARK AND RIDE

DEKORGRIP RESIN BOUND

THE NEED:

The building and development of the Tipner Park and Ride facility in Portsmouth was the first stage of the local councils redevelopment of the Tipner area. For many visitors, the park would be the first thing they saw when entering the city, so a great emphasis was placed on the appearance of the project.

With the park and ride facility expecting to see heavy use, a hard wearing yet aesthetically pleasing surface was required. This would be a particular challenge due to the size of vehicles constantly using the surface, in this case double decker buses. The surface would also have to be easily cleaned and safe due to the high pedestrian use.

SOLUTION:

The use of DekorGrip provided a contrasting finish to the design of the park and ride facility, and is used in a mixture of high trafficked and decorative areas, using differing sizes to create an eye catching finish. DekorGrip Resin Bound was selected, using different colours in different zones of the project; as a result they chose DekorGrip Natural Wicker blend at a depth of 18mm for the pedestrian areas of the project.

The idea to use DekorGrip to demarcate the pedestrian areas within the park and ride was not planned from the start but evolved as the project took shape. The council, contractors and DekorGrip worked together by using a clear colour system of red surfaces for buses, black for cars and Natural Wicker for pedestrians.

SUMMARY:

DekorGrip were able to reassure the council about the concerns regarding the ongoing maintenance and cleaning of the surfaces and provided an effective surface cleaner designed especially for resin-based surfaces. The project proceeded very smoothly without any major challenges due primarily to the good relationship that DekorGrip had built up with the council and contractors on other projects. The approachability and readiness to answer technical questions and general enquiries is a key part of the reason why DekorGrip is such a success.

The constant communication and feedback to the council meant that the project was delivered on time and to the high standards required.
