

WESTMINSTER MMA TRIALS

SPECTRUM CASE STUDY

THE NEED:

London boro' of Westminster have a problem in certain areas with high traffic volumes wearing thermoplastic lines very quickly; the areas are often tourist attractions, and many of them are trafficked almost around the clock, leading to a traffic management nightmare when lines need to be replaced.

some areas are being flagged as safety risks, especially for pedestrians and cyclists, as lines are unclear or heavily worn.

SOLUTION:

FM Conway(FMC) felt that mma should be offered, using spray system as quick to apply, fast curing and excellent finish to lines.

Meon worked with FMC to set up a night trial in parliament sq and recovered some very worn thermoplastic lines with UltraSpray, with beads added for reflectivity.

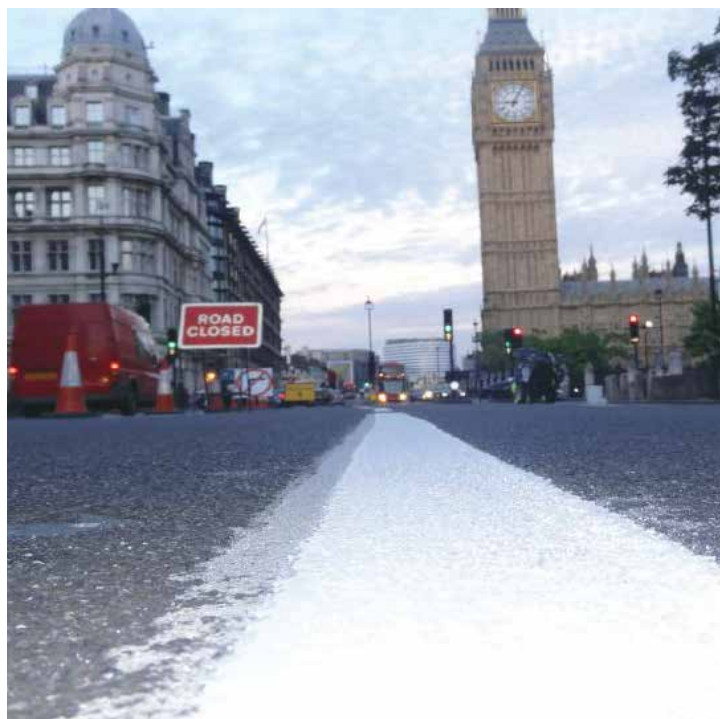

SUMMARY:

The trial went well, the client is now monitoring the results, but has already requested a full presentation of business case for this product. there is also considerable interest from neighbouring boroughs with similar problems.

This also created new long lasting lines around the area of parliament square. Which the council and contractor were extremely pleased with.

SYSTEMS USED:

- SPECTRUM UltraSpray - Sprayable MMA
- Graco LineLazer 2CS Airless spray Machine
