

CRB LASER ALIGNMENT SYSTEM

CUSTOM ROD BUILDER

We are proud to bring yet another exciting addition to the CRB line, designed by Custom Rod Builders, for Custom Rod Builders. Aligning guides on your fishing rod can be one of the most tedious tasks when building. With the new CRB Laser Alignment Tool, the days of eyeballing guides and getting them "close enough" are over.

Whats Included:

- CRB Laser & Tape Measurer
- CRB Laser Mount
- (2) Triple AAA Batteries

- Use a Phillips screw-driver to remove the battery cover.
- Install (2) AAA Batteries
- Replace cover.

- Once Batteries are installed, slide laser into the mount.
- Laser can be fitted to the reel foot mount in either direction.

After the laser is fitted to the mount it is ready to use! Attach the laser into your Reel Seat just like a traditional Reel.

TIPS & TRICKS

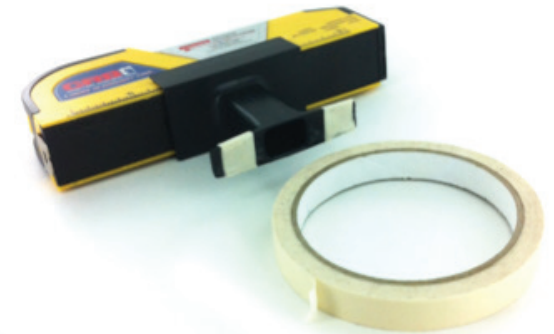

Some adjustment may be necessary once mounted to straighten the beam on the rod.

For best results avoid brightly lit rooms, to make the laser more visible.

• *Please Note:* Not all blanks are perfectly straight. Slight Curves are common.

For larger reel seats and applications it may be necessary to build up the reel foot. This is easily done using masking tape.

In addition to the laser level, this tool incorporates a second valuable feature: An 8ft retractable tape measurer, with linear and metric measurements.

The Tape Measure is perfect for doing custom guide custom guide spacing. It can also be used for decorative wrap layouts.
