

Product Name: JH LIME SLURRY

PRODUCT DESCRIPTION

JH Lime Slurry is a powdery mineral filling additive for JH Lime Wall Paint when a thicker consistency is desired for application by trowel or brush. JH Lime Slurry contains compatible silicates of different grain shape and size in a well-balanced composition.

FIELD OF APPLICATION

JH Lime Slurry is added to Lime Wall Paint to thicken the mixture. This mixture may be used to adjust or minimize differences in texture of the substrate or to create various decorative texture effects. JH Lime Slurry may be used for interior or exterior projects.

PRODUCT PROPERTIES

A fine-grained homogenous powder with a typical upper grain size of 0.5 mm. The grain shape and mineral composition JH Lime Slurry is tailored to Lime Wall Paint.

Color shade:
Light grey

Technical data
Environmental Compliance – YES
LEED – YES
CARB – YES
SCAQMD – YES

EPD - YES

APPLICATION

The applicator determines the amount of JH Lime Slurry to use. The amount is determined by the users experience and desired outcome of application process. Do not add more slurry additive than can be absorbed by the Lime Wall Paint.

Mix with a paddle attachment and drill to achieve a smooth and homogenous mixture. If mixture becomes too thick, small amounts of water may be added.

NOTE: When adding slurry to a Lime Wall Paint color, the slurry will have a “dampening” or graying effect on the final color. More slurry will affect color to a greater degree. If slurry is desired, consider this effect when selecting the original Lime Wall Paint color.

PACKAGING

1 gallon and 3.5 gallon containers

STORAGE

Lifespan is typically unlimited in tightly closed container under cool, dry conditions. Do not store near a heat source or in direct sunlight.

DISPOSAL

Dispose of or recycle completely emptied containers in accordance with local, state and federal waste regulations.
