

JH WALL PAINTS DIFFERENCE

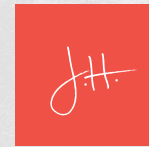

JH Wall Paints are all mineral based paints that produce unparalleled beauty and designer styled effect to interior and exterior surfaces. The light reflective properties of our paints result in a crisp and bright appearance in all lighting and weather conditions. Due to the high pH alkalinity inherent in our paints, JH Wall Paints resists fungi, algae and mold growth resulting in a hygienic and natural gorgeous finish. We use all natural earth pigments as a commitment for all mineral content in our paint collection. All JH Wall Paints are not just zero VOC, they are natural, non-toxic using no chemicals or additives that are synthetic. All JH Wall Paints and packaging are highly sustainable. Our paint containers and packaging materials are all 100% recyclable materials. We use very low-impact manufacturing processes to reduce the carbon footprint and keep the environment our top priority in the production of our natural mineral paints.

LIME WALL PAINT™

MINERAL BASED

JH WALL PAINTS™

HAND CRAFTED

HIGHLY SUSTAINABLE
UNPARALLELED BEAUTY

LIME WALL PAINT

Lime Wall Paint is a unique lime paint blended with natural mineral pigments delivering a gorgeous designer mineral matte finish. Our paint is developed with slaked lime that has been crushed, burned and mixed with water to make a lime putty. The putty is then aged for several years and thinned with water to make our beautiful paint. To tint the lime paint we use natural earth pigments. The result is a radiant, luminescent hand crafted finish that cannot be duplicated by any acrylic or latex paint. It is specifically formulated to allow the lime to gently “bloom” creating soft tonal variations and styled effect to your walls.

LUMINESCENT AND RADIANT

Lime Wall Paint coupled with the natural earthen mineral pigments refracts light in a unique way. The mineral surface breaks up incoming light and refracts it in every direction. This luminescence across the mineral surface adds character and a glowing effect to every wall.

HEALTHY AND HYGIENIC

Lime Wall Paint is eco-friendly as it contains only naturally occurring ingredients from the earth. As a natural mineral finish, Lime Wall Paint is a non-toxic and zero VOC (volatile organic compounds) paint. When applied it absorbs and removes odorous and harmful carbon dioxide from the air in the curing process thus improving interior air quality. This highly breathable paint protects your living space by not trapping moisture and humidity inside walls. Due to the alkaline pH of Lime Wall Paint the surface is also hygienic and is resistant to mold and bacteria.

HAND CRAFTED AND BEAUTIFUL COLORS

Nothing can compare to the subtle soothing vibrant colors of Lime Wall Paint, where every color is hand-made using gorgeous natural earth pigments. The beautiful shades we have selected will elevate your living space and create a designer look to every room.

Ideal for interior or exterior surfaces, Lime Wall Paint can be applied to drywall, plaster, stucco, masonry, brick and previously painted surfaces.

MINERAL PRIME

Mineral Prime is a ready-to-use mineral primer suitable for all walls and ceiling surfaces. It has exceptional hiding power with a mineral matte appearance. It is non-toxic and promotes ideal air quality and indoor climate unmatched by traditional latex and acrylic primers. Mineral Prime is made from mineral ingredients without solvents or plasticizers so there are no harmful toxic fumes emitted into your living environment. Mineral Prime is highly permeable due to its microporous mineral structure. As a result, moisture vapor can maintain a natural balance with the environment keeping the walls dry and ready for the application of natural Lime Wall Paint.

It can be applied to previously painted surfaces as a single coat or two coats on new drywall that has not been previously primed.

MINERAL WALL STAIN

Mineral Wall Stain is a ready-to-use pigmented mineral stain designed for creative wall finishes with endless possibilities. Mineral Wall Stain is applied on top of Lime Wall Paint for added dimension and luminescent effect. It enhances the inherent mottling and blooming in our mineral based Lime Wall Paint. With the hand selected colors available in Mineral Wall Stain, it adds another layer of depth to your walls.

MATTE WALL SEALER

Matte Wall Sealer is a 100% acrylic clear finish that is non-yellowing and provides a protective topcoat with excellent clarity and extremely low sheen. It is a water-based sealer and resists water, abrasion, household grime, stains and is easy to apply by brush or roller. It provides extra durability to delicate finishes in areas that will receive added traffic or moisture such as bathrooms, kitchens, hallways, etc.

Apply over any interior/exterior previously painted and cured surface, decorative paints and plasters that require protection and interior wood, all where a uniform matte finish is desired.
