

THIS TABLE IS  
**ALIVE**

THAT'S WHAT MAKES IT  
**SPECIAL**

IT WILL **CRACK**

IT WILL **CHANGE COLOR**

IT WILL **UNDERGO CHANGES**

EVERY YEAR IT WILL BE  
**MORE AND MORE UNIQUE**

Acacia is a living, breathing raw material. It is a premium quality hardwood. Every effort has been made to keep the natural, rustic appearance and beauty of the wood, which means that the furniture inherits the natural knots, splits, grains, mineral deposits, variable cracks and colour variations. No two pieces of timber are the same. That's just a part of what makes it unique and special, your table will truly be a one-of-a-kind.

Acacia like all timbers will react to the environment. Direct sunlight and humidity will cause the timber to shrink and expand over time. The cracks that begin to open up in the timber are actually called checks in the timber industry. They are not considered a fault, but part of the character of the product as it ages over time. Other changes that will occur will be a lightening/darkening of the product. Knots and grains in the timber may become more apparent over time. This is the nature of a beautiful hand-crafted and hand finished hardwood timber product and all completely normal. It is part of the rustic and organic appeal of a natural product, and will not affect the structural integrity of the piece. This piece will undergo many changes and will last a very long time if treated with love, care and respect.
