# PROCREATE BRUSHES INSTALLATION GUIDE

iCloud Drive (Files) | Dropbox

USING THE FILES APP (ICLOUD DRIVE)

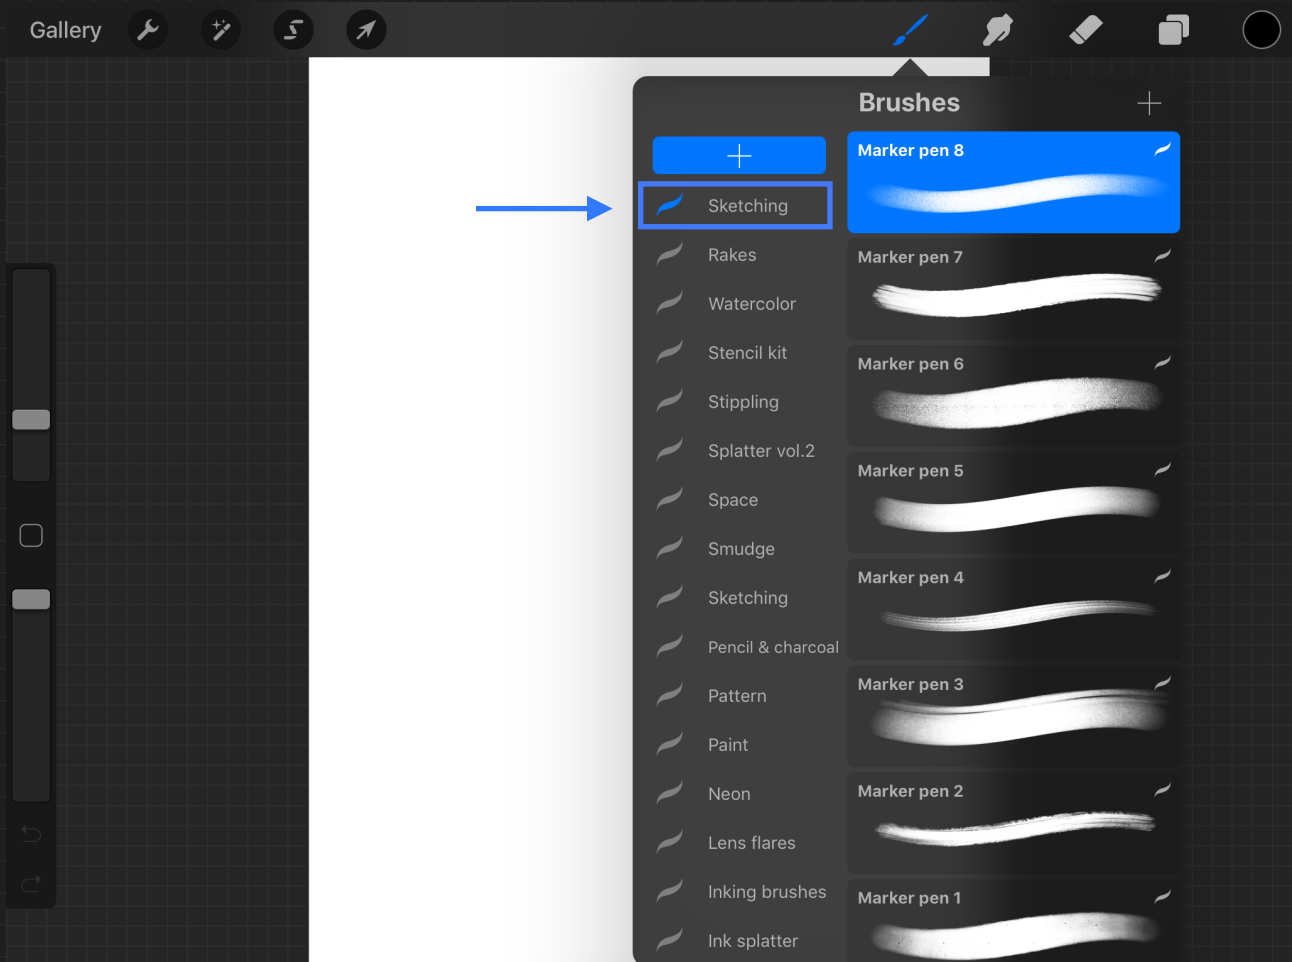

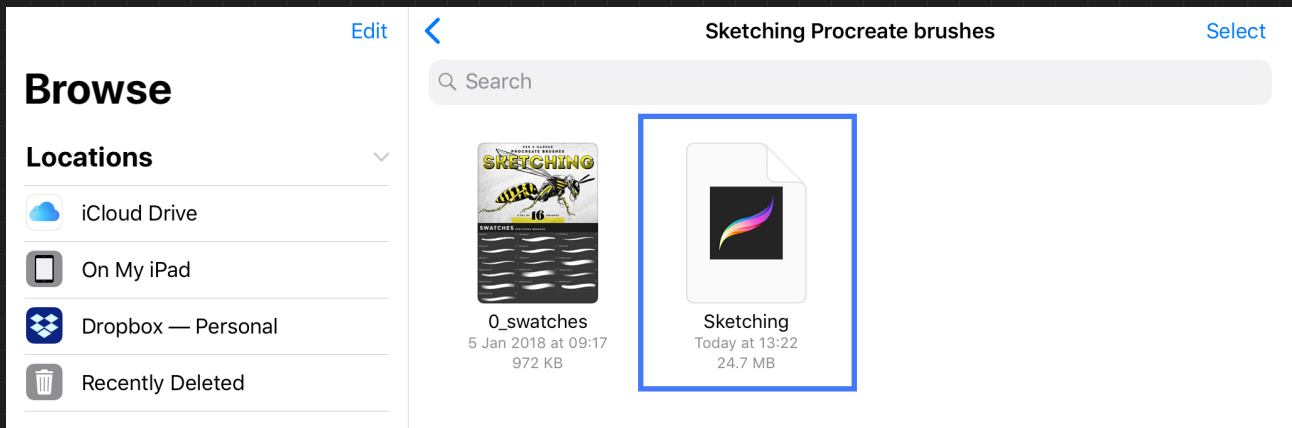

First, start by opening the ZIP file from your computer or laptop (or use a ZIP opening app on your iPad). Then, put the **.brushset** file (the file containing the brushes) into a folder in your iCloud Drive/Files app account (Finder sidebar if you're using your computer). You can also use the web browser version (icloud.com) and sign in using your Apple ID, then load the brushes to iCloud Drive.

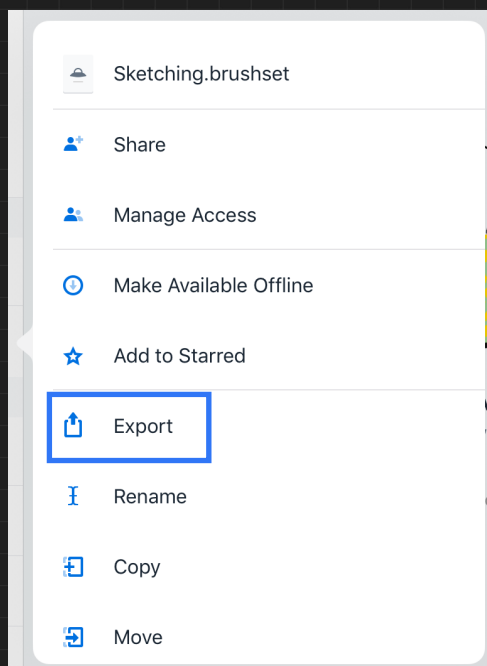

On your iPad, open the Files app.

Locate the .brushset file, and simply tap on it - this will automatically import the brushes to Procreate. Then, open Procreate and you will see a new folder added in your brush panel, along with your other brushes sets.
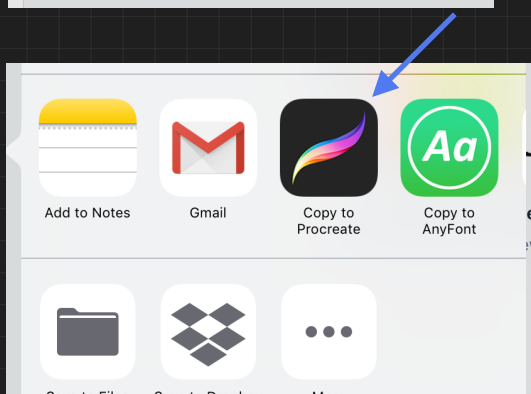

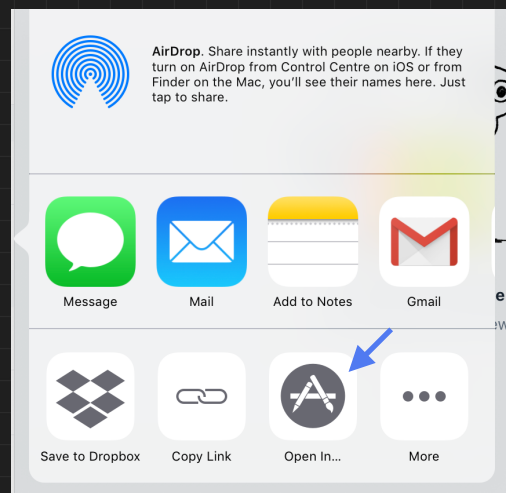

IMPORTING FROM DROPBOX

First, open the ZIP file and place the .brushset file (as before - this is the file that contains all the brushes) in your Dropbox account. Back on your iPad, open the Dropbox iPad app, and locate the file. (It doesn't have a preview - this is normal).

Click on the three dots icon next to the file, and select « Export ».
Then, click « Open in... » and then, « Copy to Procreate »

Open Procreate - and you will see the newly added brushes set in the brush panel, along with your other sets/collections.
