

Slide Sheets

BetterLiving Slide Sheets are designed to reduce friction and improve the ease of transfer. They aid in transfer and repositioning either independently or assisted.

They are available in two types, including Single Patient Use (disposable) and Washable (reusable) variants to suit most applications. With heat sealed and hemmed edges (reusable only) these slide sheets are used to help improve manual handling practices.

Application

Slide sheets can be used individually when folded in half or ideally with one sheet placed on top of another.

Variants

BL1000 - BetterLiving Single Patient Use Slide Sheet, 150x200 cm, Non-Washable, Yellow

BL1001 - BetterLiving Washable Slide Sheet, 150x200 cm, Blue

Regular Maintenance

Check slide sheets frequently for any signs of damage, tearing or fraying. If in doubt, discontinue use.

Condition of the Slide Sheet may deteriorate over time, due to prolonged exposure to sunlight, the cumulative effects of laundering, contact with sharp or abrasive surfaces or edges, etc.

The product must therefore be inspected for signs of damage or wear prior to each use. In the event that signs of damage or wear are apparent, the product should be replaced.

Care & Cleaning

BL1000

This is a single patient use slide sheet. It is not washable and should be disposed of once soiled or after use in highly infectious scenarios. Small spills can be wiped down with a mild soapy solution.

BL1001

Simply use a mild soap solution and rinse carefully. Do not use harsh detergents, solvents or bleach. For increased infection control, machine wash up to 80C, increasing and decreasing the temperature in stages to avoid damage to the yarn and shrinkage. Air dry when possible, using a cool tumble dryer temperature not exceeding 50°C if necessary. Never place in a hot drum or expose to extreme temperatures.

Specification Table

	BL1000	BL1001
Colour	Yellow	Blue
Washable	No	Yes
Re-usable	Yes (Single Patient Use)	Yes
Material	Polyurethane Coated Polyester	Silicone Coated Polyester
