Hoists

Winches

Chisels & drills

Impact sockets

Accessories

# Preface

## In this catalogue

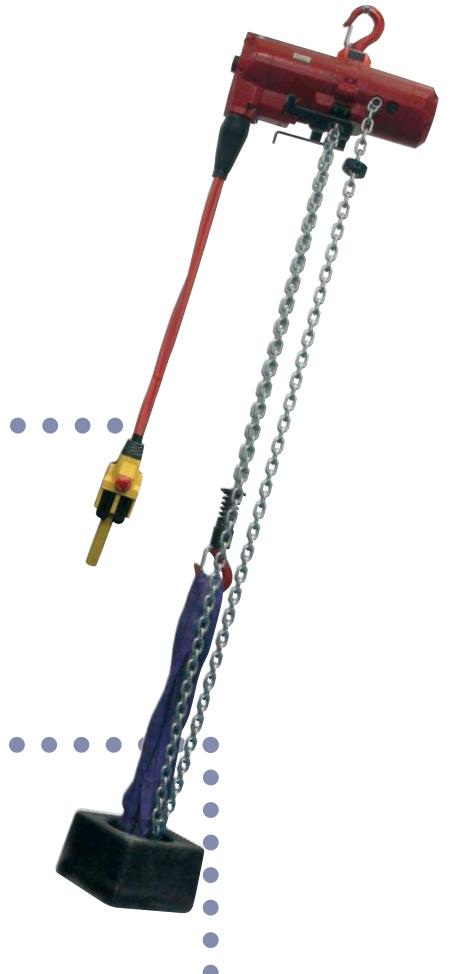

In this catalogue you will find a survey of our delivery program, ranged by application. The tools are supplied as Yokota, Toku or Red Rooster air tools, Action impact sockets and SMC air treatment equipment. All products are of industrial quality, with exception of the Red Rooster Automotive range. These tools are especially used in (car) workshops. For an extended range of accessories you also can contact us.

Our tools are sold worldwide. Nevertheless we always keep in close contact with our customers. We think it is important to listen to the special requests of our customers and share knowledge and experience. Our worldwide sales- and service network also offers good advantages for exporting companies.

**High quality assembly tools**

## **Yokota Hi-Tec**

Yokota Hi-Tec impulse tools are a step ahead. With a range of normal impulse wrenches up to electronic controlled impulse wrenches the tools tighten the joints in an optimal way. The clamp force of the hard and soft joints is high and the relaxation low.

A big advantage of the impulse wrenches is the quick tightening time. This offers the possibility to decrease the assembly time during a process. Impulse wrenches have no kick-back, so they are comfortable to use. The optimal clamp force results in a better end product; the aim of every manufacturer!

## **Yokota Industrial**

Yokota industrial air tools are manufactured to the highest quality. The tools have been developed for continuous use and are used in various industries. The Yokota grinders are produced with patented gears with little play. This is why vibration and wear are minimal.

## Industrial quality tools

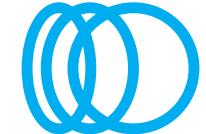

## Toku

Our Toku program contains a large range of industrial air tools. Each tool is manufactured for long continuous use. The ball-bearings, gears and the air motor are produced with highest accuracy, smalles tolerances and therefore offer the best performance.

As with the Yokota tools, the Toku tools are also manufactured in Japan. In the Toku range you will find a.o. impact wrenches, ratchet wrenches, drills, grinders and hammers, among which paving breakers, clay diggers and rock drills.

The Toku impact wrenches are constructed with a closed hammer or Twin-hammer mechanism. The construction without loose hammerpin prevents pin breakage, while the twin-hammer has a high torque and long lifespan. All pistol models are executed with exhaust through handgrip and nearly all models have an adjustable silencer.

### "Moving circle" - Toku's corporate symbol

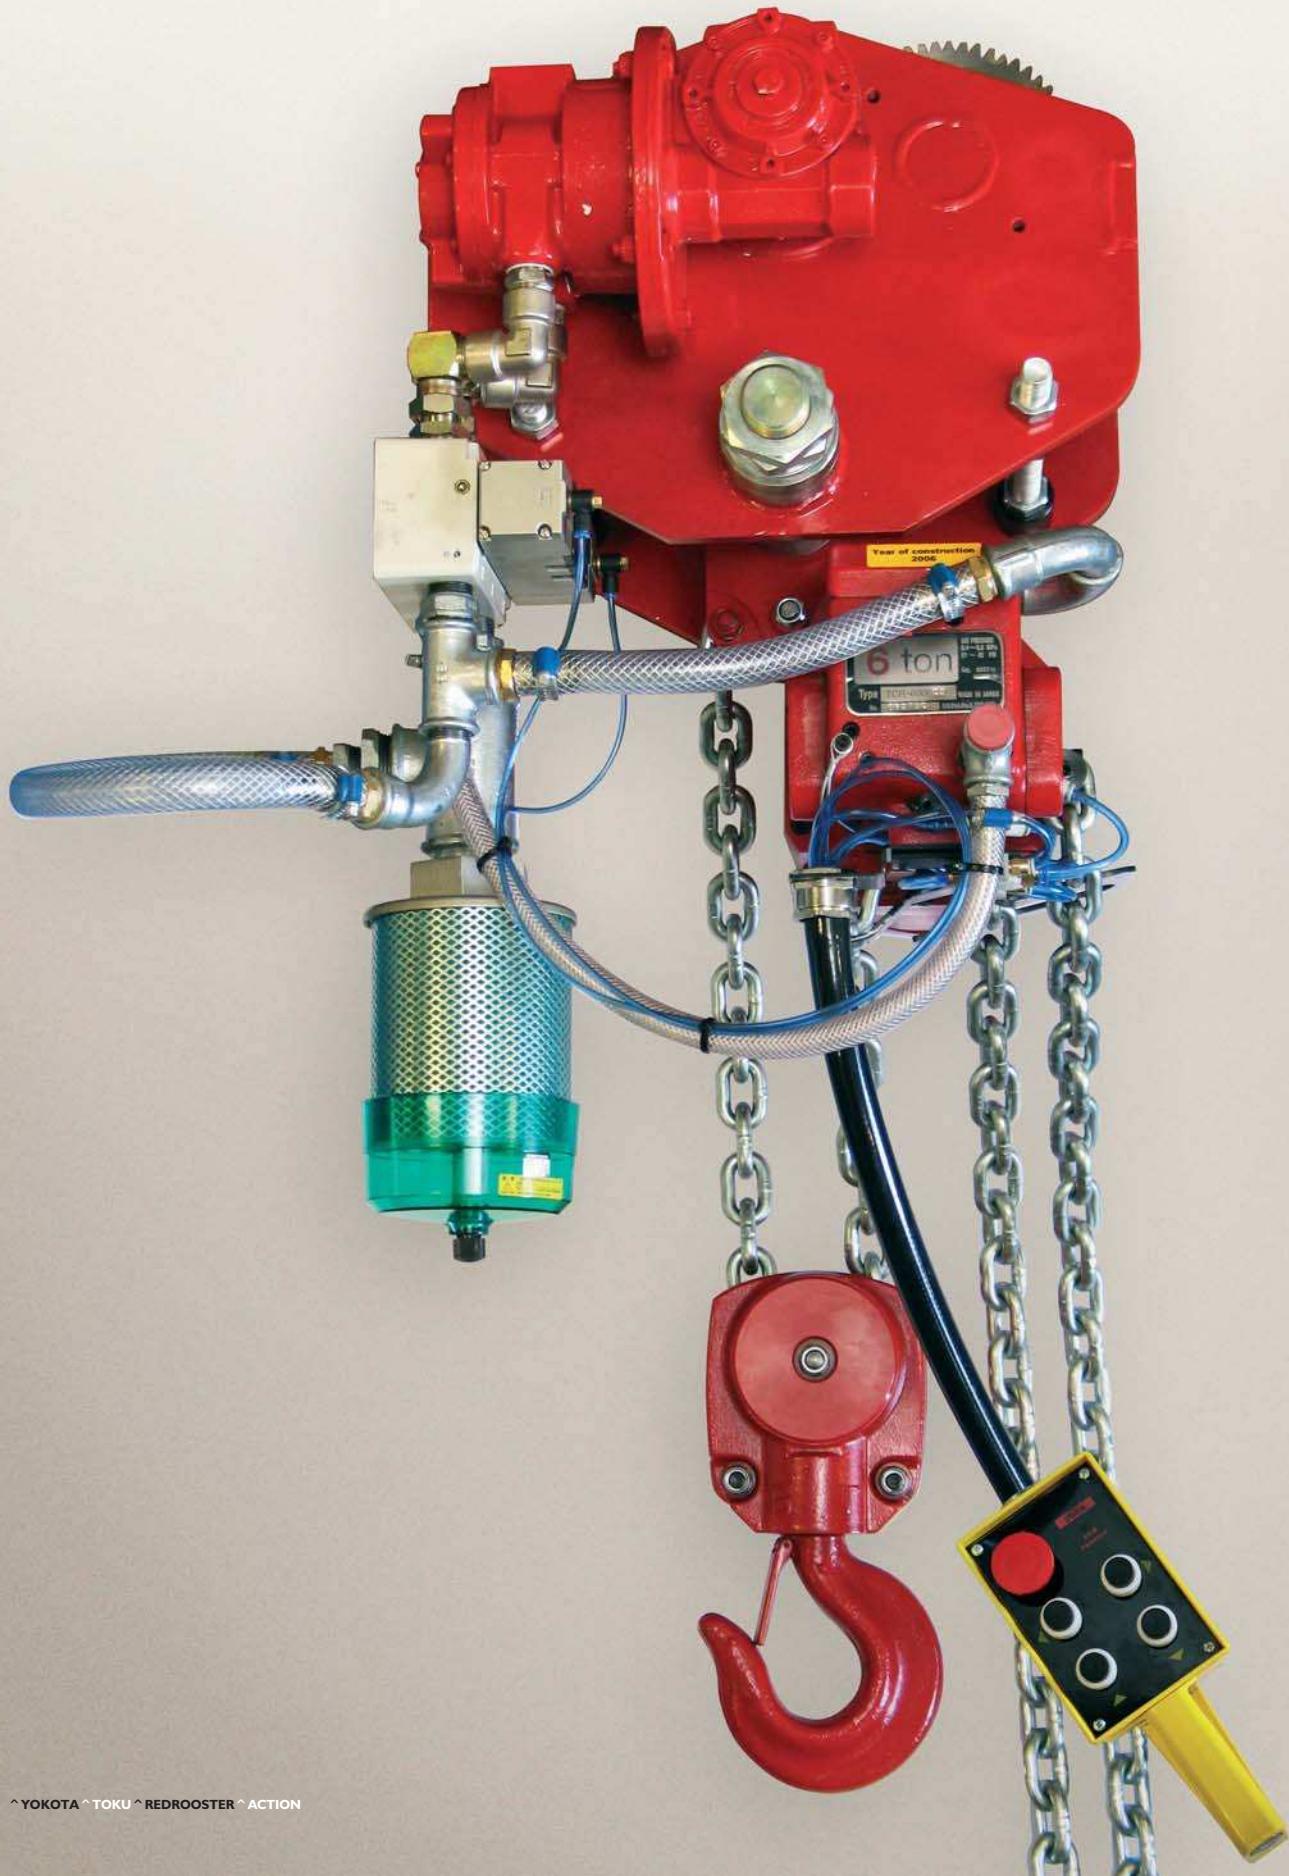

The corporate identity symbolizes new born power and the amplification of this new power for growth and development moving towards the new age. The meaning of the 3 circles represent: quality, reliability and continuity. Toku is using this corporate symbol as a flagship to challenge the 21<sup>st</sup> century. Today, Toku is considered as one of the leading manufacturers for pneumatic tools and hydraulic products in the world, having one of the most advanced production facilities and superior technology.

The automotive and industrial pneumatic tools are traditional products within Toku's product line. As a result of continuous development in this field for technology and design.

## Red Rooster

A big range of applications

### Red Rooster Air tools

Red Rooster is our private label. This selection of tools from various manufacturers, gathered in one brand, completes our program.

Red Rooster Industrial contains for example grinders and drills for continuous use. High quality tools selected from the product range of the best manufacturers.

Red Rooster Automotive covers the automotive after market.

Our Red Rooster program has been changed in the last few years. The number of industrial tools has been increased, while the number of Automotive tools has been decreased. Tools for the Automotive after market, workshops, etc. can be recognized by their type name starting with RRA.

### Red Rooster Air chain hoists

The air hoists in our Red Rooster program are available from 0.125 up to 100 tonnes. The hoists are made by Toku and are of high industrial quality. They are in use with several well-known users (see page 107). Red Rooster air hoists can easily be delivered in spark resistant models. Standard with build-in load limiter. With a market share from 70% in Europe we can say that we have an interesting product for an interesting price that is available with short delivery times.

### Red Rooster Winches

The Red Rooster winches are available from 0.2 up to 35 tons in electric, pneumatic and hydraulic models.

## Action

### Power impact sockets and chisels

### Action Power impact sockets

Impact sockets for professionals! Action impact sockets are manufactured from the best materials: chrome-molybdenum alloy steel. Action impact sockets are made according to DIN3121 and DIN3129. The exact fitting causes less play between square drive and impact socket, and impact wrench and bolt. This results in a longer life of the tool and impact socket. As reference we have various big car manufacturers.

Sleeve Drive Sockets have been developed by Action at the request of Yokota to improve the quality of a joint tightening with impulse wrenches. Sleeve Drive Sockets have minimized play between socket and tool by reducing "wobble" and stabilizing the torque setting. The use of Sleeve Drive Sockets is not only of benefit to the actual joint but also reduces vibration to the tool and operator, also reducing noise levels and tool wear.

### Action Chisels

Action chisels for air hammers are available in a large range. For each application a special size is available, resulting in an optimal power transmittance. For chisels not in this catalogue, please contact us directly. Show us your hammer, we supply you with the right chisel.

# Maintenance and use

## Air tools

## How to use

Please take the following points into consideration before using new air tool(s). We advise you to oil your tool with resin and acid free oil through the air inlet. Check, before connecting the hose to the tool, whether the hose and quick coupler are clean.

Make sure that the air is dry and clean. We advise you to use air treatment equipment and a correctly adjusted lubricator. Use the correct oil (Yokota NO32 air tool oil). For a good lubrication we advise use of a hose between oiler and airtool of max. 8 m. (26 ft.). If you want to use a longer hose, it is possible to mount a SMC jet-oiler. The jet oiler has a reach of approx. 200 m. The air pressure of the tool has to be 0.63 MPa. The correct hose diameter is necessary to achieve the best performance.

### Please note

When using impact wrenches and impulse wrenches, the torques shown will vary if used on a soft joint, e.g. washers, gaskets, etc.

## Maintenance

Draw water from the air piping and compressor tank daily. Check if the lubricators are filled with (Yokota) air tool oil.

# Quality of the air

## Optimal functioning of the tool

 **SMC**<sup>®</sup>

### Pressure is too low!

If the pressure is too low the tool will show less performance and less precision, resulting in slow starting and less productivity. 1 bar pressure-reduction means 25% power loss!

Low pressure may occur if:

- The capacity of the compressor is insufficient,
- The air piping has been pitched incorrectly,
- There are air leaks,
- The air treatment equipment is not functioning properly and/or is not pitched correctly,
- The wrong size hose nipples or quick couplers are used,
- The tank is too small.

### Quality of the air

Poor air quality can result in expensive production downtime, and will increase the time and costs of maintenance and will shorten the life of your tools.

Good quality air should be a first consideration, cost will earn itself back easily, as it will save your tools from damage.

Poor air quality can be caused by:

- Lack of necessary air treatment equipment,
- Poor quality and/or wrong installation of the air treatment equipment,
- Lack of maintenance of the air treatment equipment,
- Incorrect hose diameter.

# Warranty

## What you should know!

## Warranty period

The warranty period from the date of purchase is as follows:

- 12 months Yokota, Red Rooster and Toku industrial air tools
- 12 months Red Rooster hoists and winches
- 12 months Red Rooster automotive air tools
- 3 months On repairs and replaced spare parts, which are repaired by either us or our official service workshops.

Warranty covers material and / or construction faults of the manufacturer, which are clearly definable. Replacement of parts or repair by an official Yokota/Toku/Red Rooster service workshop is free of charge when the tool is covered by warranty. Freight or postage is for the account of the customer.

Damage attributed to normal wear, overloading or incorrect use is excluded from warranty. Replacement of tools as a consequence of warranty claims is not part of the warranty arrangements.

Also claims for loss of production and/or other damages are excluded from this warranty. Repairs under warranty can only be considered, when the tool is in its original state and it is accompanied by the purchase invoice. Warranty claims have to be made through the distributor, who has supplied the tool concerned. We reserve the right to make unannounced changes to our tools. These warranty conditions are based on an 8 hour working day.

Please note:  
Above torque values are only guidelines and are calculated with friction factor 0.125.

## Selection chart

# I. Impact wrenches

## Application and mechanism

### **Yokota**

The Yokota impact wrenches are used for industrial applications. These heavy duty models are produced with 1 or 2 hammer impact system. For specialised assembly applications we refer to the chapter impulse wrenches.

### **Toku**

The Toku impact wrenches are used for industrial and heavy duty workshop applications. These high quality tools are produced with closed hammer mechanism, or with Twin-hammer mechanism.

### **Red Rooster**

The Red Rooster impact wrenches are used for industrial and heavy duty workshop applications. The tools are produced with twin-hammer or 3-jaw mechanism, suitable for continuous use.

The Red Rooster Automotive impact wrenches are used for workshop applications in intermittent use, e.g. automotive repairshops, etc. Manufactured with 1-hammer mechanism.

# Impact wrenches

## Applications

MI-12

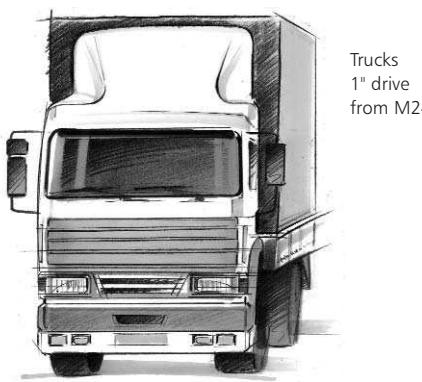

YW-6CL

RR-15P

MI-38ELR

Trucks  
1" drive  
from M24

Nuts and bolts get stuck. Fortunately the impact wrench can untighten any joint without problems and without any major effort from the operator. Most common impact wrench used in garages are  $\frac{1}{2}$ " square drive, and are suitable for nuts and bolts upto M14 - M16. Repairing vans and larger vehicles with bolt sizes of M22 - M24 requires a  $\frac{3}{4}$ " square drive to be used. Lastly the 1" square drive impact wrenches are mainly used in truck and bus workshops. Besides (car)workshops, impact wrenches are also used in other industries for example on shipyards, at construction workshops and in the petrochemical industry.

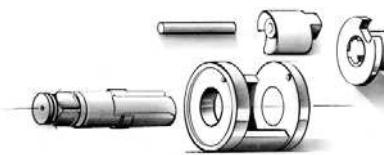

### The right choice

Most makes of impact wrenches look more or less the same. However the prices may differ. This is because of the quality of the impact mechanism. If the tool is only to be used once in a while, then it is advisable that you buy a cheaper model, if however the tool is going to be used more frequently then the industrial models are to be considered. Manufactured with stronger materials and better quality impact-mechanisms, they guarantee a longer, more durable and trouble free lifetime. Cheaper tools are mostly executed with the single hammer impact mechanism. The industrial ones however, have a pin-clutch (Dynapact) or twin hammer system.

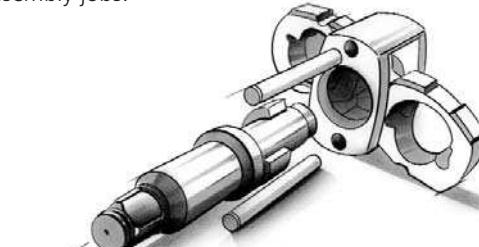

Noise, vibration and weight also influence the price. An industrial wrench has a better silencer and less vibration. In tyre workshops where impact wrenches are used continuously, these are the most important factors. Fortunately more and more impact wrenches are executed with a rear exhaust (outgoing airflow through the hand grip), while most of the conventional wrenches have an exhaust which is situated at the front of the tool. This can cause brake dust to be blown into the face of the operator while untightening the wheel nuts. Very uncomfortable!

Cars  
1/2" drive  
M14 - M16Vans  
3/4" drive  
M22 - M24

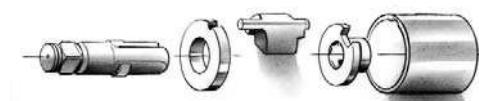

## Mechanisms

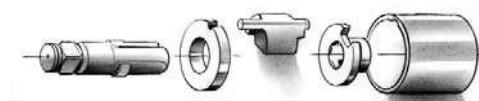

The 1-hammer system makes 1 impact per rotation at 1 side of the anvil. This causes a higher energy per blow. The impact wrenches with the 1-hammer system are especially suitable for disassembly jobs.

The twin-hammer system makes 2 impacts per rotation at both sides of the anvil. Same principal as the 2-hammer system, manufactured differently.

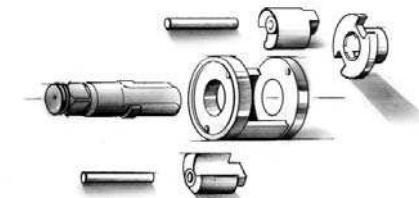

The closed hammer system; this construction, without loose hammerpin, will prevent breakage. The working principle is based on the 1-hammer system.

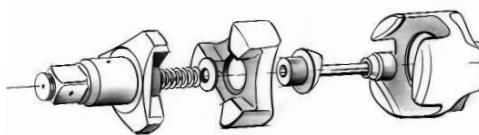

Air consumption  
To choose the right compressor one needs to know how much air l/min a machine uses and how the machine will be used, continuously or intermittently. There are 2 ways to estimate the air consumption of air tools:  
Method 1 Measure air consumption with continuous operation  
Method 2 Measure with intermittent operation

Continuous operation  
The total air consumption when the trigger is pulled for a period of one minute (this is what you will find in this catalogue). If you use our machine like this you need a compressor with the capacity stated.

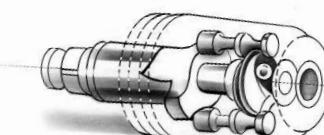

Intermittent operation  
The air consumption is measured when the trigger is pulled intermittently for say 25% of a minute, which gives 25% intermittence. If you use your machine like this you need a compressor with 25% of the capacity stated.

The 2-hammer system makes 2 impacts per rotation at both sides of the anvil.

The 3-jaw system gives, per rotation, one impact on all 3 jaws of the anvil. This gives a high torque output. Impact wrenches with the 3-jaw system are *only suitable for hard joints*.

The Dynapact impact system has two pins hammering on the anvil, making 1 impact per rotation at both sides of the anvil at once. The system gives high torque output and is well balanced.

### Intermittence

The average time that a machine is calculated to be in use during a normal working cycle (1 min.). Intermittence varies between different types of machines, for example a grinding machine is normally in use for long periods and therefore has a high intermittence. An impact wrench is normally used in short bursts and therefore has a lower intermittence.

An example. If at 100% intermittence, the air consumption is 800 l/min then at 25% intermittence the air consumption would be 200 l/min i.e. 25% of 800 l/min.

Impact sockets

Choose the right size impact socket for your impact wrench. If the sockets do not fit exactly this may cause a loss of power and wear of the anvil. For detailed information about the impact sockets we refer to the special chapter Action impact sockets. Extension bars, universal joints and adaptors are also available. Worn impact sockets cause wear on the square drive of your tools, giving more vibration to the operator.

## 2. Impulse wrenches

### Application and impulse mechanism

#### Faster tools make assembly quicker

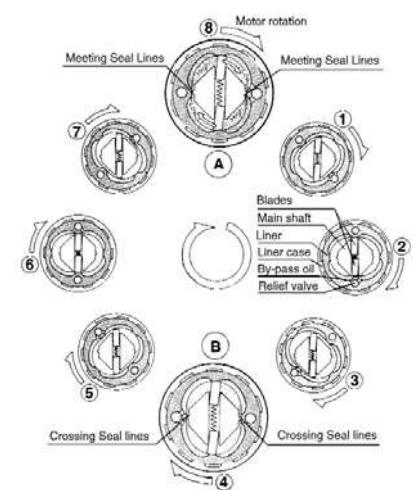

Yokota impulse wrenches are widely used for tightening jobs in the assembly industry, where accurate torque tolerances are necessary. Impulse tools are light, powerful, small and very importantly, have no kick-back. The Yokota range of impulse tools is increasing fast, starting at 6Nm to tighten small joints, and goes up to 600Nm. Evaluation of tightening processes in car assembly shows that tightening joints uses 10% of the total assembly time. Working with faster tools therefore can speed up assembly lines substantially.

#### A fail-safe system

Product liability is essential to carmakers. All tightened joints have to be correct. For this reason all bolted joints must be counted, documented and, of course, tightened with the right clamping force. In order to do this, you need an impulse wrench (with a built-in transducer) connected to a controller. If the controller establishes that the tightened joints do not meet the specifications, it can give a line-stop signal and the joints have to be checked manually. This fail-safe system fits perfectly in the Poka Yoke Strategy.

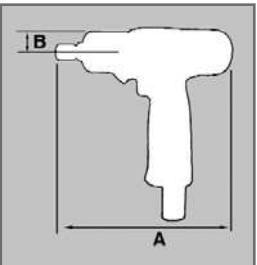

#### High repeatability

Impulse wrenches have a twin blade impulse mechanism for sealing oil which gives a high repeatability. The mechanism is designed so that the liner, rotated by the air motor gives an equal torque on both blades and instant rotation torque on the main shaft (see figure below). A by-pass is designed in the liner so that the oil can escape from the area of high pressure to the area of low pressure at the moment of creating a pulse and the amount of oil flow can be adjusted by the relief valve to control the torque output. Depending on model and setting, the impulse wrenches give 10 - 40 impulses per second. The power is transmitted by oil pressure and therefore the impulse wrenches have a very low noise- and vibration level.

- No lube air motor to protect the environment
- Extended oil change intervals (new impulse mechanism design)
- Lightweight
- Low air consumption, high efficiency air motor
- High durability, due to improved air motor design features, with special patented air motor vanes
- Improved ergonomic design
- Low noise and vibration levels
- Low trigger-force

\* Torque specifications

All specified torques are measured on the Yokota testers, series YET, at a dynamic airpressure of 0.63MPa. The Yokota testers have a static transducer, the specified torques are therefore to be used as a guidance only. In general the torque range will be lower in case of using lower airpressure, extension bars, torx or hexagon inset sockets, soft joints, etc.

about your specific request and we will make you a suitable proposal.

Accessories for impulse wrenches  
on pages 43 - 45.

The Yokota Y-, YLa-, YED- and TKa-series impulse wrenches with double chamber air motor reach the required torque very quickly. The tools have a high number of impulses per second, and therefore very accurate torques can be realized, resulting in increased production speed.

Patented twin blade impulse unit. Yokota's unique impulse mechanism reduces noise and vibration! High impulse frequency.

### System features

- Group control
- Controlled shut-off
- Double tightening detection
- Interlock with assembly line
- Error judgement on trigger release
- Teach-in mode for programming
- Oil deterioration indication

### Controller YTC-3

- Power supply: 100 - 240V AC
- Input: 8
- Relay output: 4
- Opening and shutting capacity: Max. DC-48W, AC-220VA)
- Output for solenoid valve: 1 (DC24V 2W)

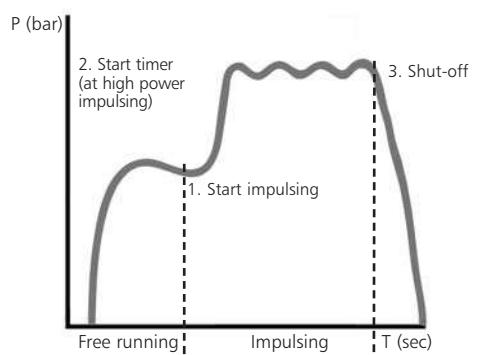

### Poka Yoke<sup>+</sup>: function principle

The system is controlled by measuring the air pressure at the inlet side of the air motor. This air pressure varies from free running to impulsive. By this measured air pressure the controller detects contact of the bolt head (point 2). Upon contact, the adjustable timer gives the shut-off signal (point 3). Adjustability of the timer takes care of adoption to either hard or soft joints. Similar, the controller detects double hits and trigger release before shut-off.

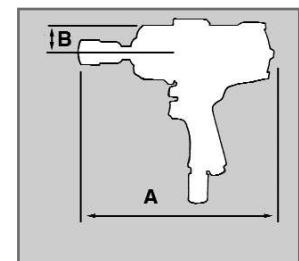

Typical air pressure curve of the impulse wrench

The whole system is more accurate than shut-off or standard impulse wrenches.

\* Torque specifications

All specified torques are measured on the Yokota testers, series YET, at a dynamic airpressure of 0.63MPa. The Yokota testers have a static transducer, the specified torques are therefore to be used as a guidance only. In general the torque range will be lower in case of using lower airpressure, extension bars, torx or hexagon inset sockets, soft joints, etc.

Type	Square / Hex drive	Bolt capacity mm	Rotations p/min	Torque Nm*	Airs. l/sec	Weight kg	Inlet-thread	Hose diameter mm	Dimensions A mm	Dimensions B mm	Vibration m/s <sup>2</sup>	Noise level dB(A)

The Yokota testers have a static transducer, the specified torques are therefore to be used as a guidance only. In general the torque range will be lower in case of using lower airpressure, extension bars, torx or hexagon inset sockets, soft joints, etc.

### Save time - save money

Because of the principal of using hydraulics to reach a certain torque, impulse tools can run at a high rpm. The required torque is reached in a split second. All Yokota impulse wrenches can be used for hard and soft joints, and give a high accuracy / repeatability and a low relaxation.

For all impulse wrenches quick change couplings - 7/16" hex are available. You can choose out of 2 sizes:  
 \* DO9938-0-100 for 3/8" square drive  
 \* DO9912-0-100 for 1/2" square drive

Accessories for impulse wrenches on pages 43 - 45.

## Bolt/torque control

### Electronic control for YEX-, YED- and TKa series

YETC-200

YETC-200

YETC-300

YETC-300

### Multi Fastening Controller YETC-200 / YETC-300

The YETC-200/300 are developed for accurate tightening and fit in a Poka Yoke assembly process. The controllers measure, judge, count and document all joints and if necessary, file them in a computer. Communication between the controller and the computer increases the number of facilities. One controller can operate four different impulse wrenches with different specifications (like torque adjustments). By programming different groups for each group of joints, the operator can switch tools without notifying the controller. The controller automatically switches to operate the next tool, after tightening all joints within the group according to the specifications. The controller is available in several executions for all kinds of applications and can be programmed in numerous ways, in relation to the various joints.

### Features YETC-200 ETB

- Easy to program, according application specifications
- Improved electronics for even more accurate and fastertorque calculations
- Torque calculation over more impulses
- Standard 1 tool connection
- Optional 4 tool connection (not to operate at the same time)
- Compensation impulses to minimize relaxation
- Poka Yoke proof (group control, etc.)
- 2-step tightening possible
- Buzzer or LED version tool
- 8 setting groups-
- Parallel and RS-232 output for traceability
- External solenoid valves in air supply
- Integration in the production possible by means of many input- / output signals

### Extra features YETC-200 EA

- 2-way communication by RS-232
- Automatic group change (sequence programmable)
- Real time clock
- Built in timer (for job)
- More input signals (see manual for details)
- More output signals (see manual for details)
- Can be integrated in the production any thinkable way (input - output signals)
- Statistics inside CP CPK
- Memory for 10.000 cycles

### Extra features YETC-200 EA-LAN

- Ethernet (100 BASE-TX/10 BASE-T Autodetect function)
- Protocol: TCP/IP
- Connector: RJ-45

### Features YETC-300

- Same functionality and parameters as in YETC-200
- Two tools can be used simultaneously

# System wrenches

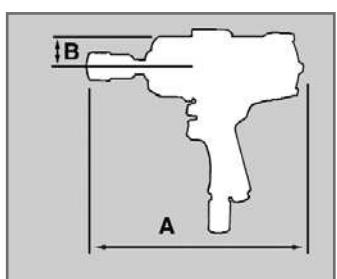

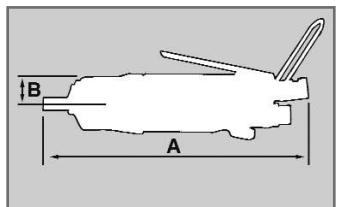

## Documentation of the joint

Yokota has impulse wrenches with an integrated transducer (system wrenches). In combination with a controller YETC-200 / YETC-300 the torque can be set and judged. The measured torque can be stored in a computer or printed. With this system can be shown that the correct joint was made, in case of product liability claims. The systems wrenches only need 1 to 2 seconds for each joint. The tools have no kick back and fit perfectly in a Poka Yoke assembly area.

YEX-3000	3/4" Square	16	4.000	186-284	10.0	6.4	PT 1/4"	12.7	309	40	4	82

Note: All YEX-types are pistol models, with exception of the S and SA types.

\* Torque specifications

All specified torques are measured on the Yokota testers, series YET, at a dynamic airpressure of 0.63MPa. The Yokota testers have a static transducer, the specified torques are therefore to be used as a guidance only. In general the torque range will be lower in case of using lower airpressure, extension bars, torx or hexagon inset sockets, soft joints, etc.

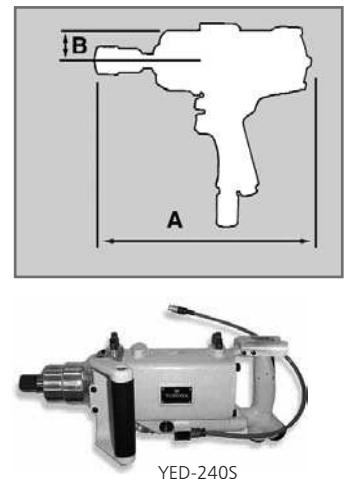

Special hose (type YP YEX) for protection of the signal cable minimizes production stops due to cable damage. Applicable on all YEX pistol models. Standard length: 7m (page 44).

Rubber protection covers for system wrenches are included in the box, with exception of the straight models (page 44).

Accessories for impulse wrenches on pages 43 - 45.

## Double chamber air motor

The YED system wrenches are equal to the YEX-series, but with the added feature of a double chamber air motor. The system wrenches with double chamber air motor reach the required torque very quickly. The tools have a high number of impulses per second, and therefore very accurate torques can be realized. On top of that, TKa series have lighter weight, can run on oilfree air and offer best ergonomics. TKa-series can be delivered optionally with LED signalling instead of a buzzer.

## New lightweight series

Optional on TKa System Wrenches: integrated LED status-signal:  
● Green = OK  
● Red = not OK  
 Visible from every angle: left, right, from top and behind.

The transducer for the YEX, YED and TKa  
 The strain gauges are positioned on the main shaft, picking up the twisting torque on the main shaft at each impulse as close as possible to the socket. The electric signals are transmitted by induction through the internal- and external coils. Due to this principle the Yokota transducer is very reliable, accurate and without wear.

For a system YEX, YED or TKa you need:  
 1x Controller YETC-200 GTB or YETC-200 EA  
 1x Impulse wrench YEX, YED or TKa  
 1x Solenoid valve and tool cable (7m)  
 YETC-2 SVC

Optional equipment:

- For two-step tightening YETC-2TB SVD (2 solenoid valves, 2 air pressure regulators and a tool cable 7m)
- Printer YETC-3P and cable YETC-2PC
- Tool cables: YP7642-0908-01-38, connecting cable, YP7642-1400-00-00 (10m), YP7642-0908-01-19 (15m)
- Lamp tower
- Socket selector box
- Spiral hose with intergrated toolable, max. 15m (-misc010606).

# System wrench

## Yokota E-wrench

The Yokota E-wrench has been developed on request of the car industry in order to decrease the cost of production. This has been achieved by decreasing the energy consumption. The energy consumption of the E-wrench is only 10% of an comparable air tool. This benefits the environment as well.

### Features

- Better ergonomics due to lower noise- and vibrationlevels, low trigger force and no reaction force
- The E-wrench has a high performance, which results in the same torque accuracy as the YEX/YED/TKa (air) system wrench
- High degree of reliability and safety

In comparison with continuous drive tools:

- Time savings up to 35% possible
- At the same torque level: higher clamp- forces and less relaxation

Type	Square-drive	Bolt capacity mm	Rotations p/min	Torque Nm*	Spindle-offset mm	Weight kg	Noise level under load dB(A)
e-M60	3/8"	6	3.500	10 - 25	23	1.9	73
e-M80	3/8"	8	3.500	20 - 40	23	2.6	73

\* Torque specifications

All specified torques are measured on the Yokota testers, series YET. The Yokota testers have a static transducer, the specified torques are therefore to be used as a guidance only. In general the torque range will be lower in case of using lower airpressure, extension bars, torx or hexagon inset sockets, soft joints, etc.

### System configuration

Using AC 100 - 240V as power source. Tightening with torque control function. Torque controller is common with YEX-system air operated wrenches. Driver unit is required to drive the motor. Controller (YETC-200/300) and driver unit (e-PDA-2) to be ordered separately.

# Accessories

## Sleeve drive impact sockets

Sleeve drive impact sockets are developed by Action on demand of Yokota, to improve the quality of tightenings with impulse wrenches. Sleeve drive impact sockets have less play between socket and anvil, thus reducing wobble and increasing the torque repeatability.

**Less Vibration, less noise, less wear and better torque tolerance!**

## Sleeve drive impact sockets

An overview of our program:

- Hexagon sockets
- Normal or long execution
- Torx ®, internally and externally
- Magnetic executions
- Sockets for internal hexagon boltheads
- 3/8", 1/2" and 3/4" square drive
- Adapters and extensions

Ask for our special brochure on sleeve drive impact sockets.

### Battery for battery impulse wrenches

Order number	For type	Description
8530-3001-00-01	YBX-1/YBX-50	9,6 Volt / 2,0 AH, type EB-9B, Ni-Cad
8530-3002-00-00	YBX-1/YBX-50	9,6 Volt / 2,0 AH, type EB-9M, Ni-Cad with LED-indication
8530-3005-00-01	YBX-50	9,6 Volt / 3,0 AH, type EB-930H, Ni-Mn

### Chargers for battery impulse wrenches

Order number	For type	Description
8530-4005-00-00	YBX-1/YBX-50	230 Volt, type UC24YC Charging time 20 minutes

### Quickchange couplers 7/16" Hex

Order number	For type
D09938-0-100	3/8" Square drive
D09912-0-100	1/2" Square drive

### Protection hose

Order number	For type
YP YEX	YEX and YED series

### Spiral hose

Order number	For type
MISC010606	For all system wrenches

### Tool holder

Order number	For type

# Accessories

## For maintenance and service

### Service sets

You will need these service sets with spare parts if you are going to change the oil. For quick service we advise you to use a vacuum pump and oil tank (YEVP-1 + YEVP-1T).

#### Please note!

Always use oil with the right specifications when changing oil. Only then you will have a optimal tool power and a minimum oil consumption. We recommend NOBP oil for the impulse unit.

Yokota torque measuring equipment (YET-series) is specially designed to check and test the functioning and performance of impulse wrenches. All specified torque figures in this brochure are measured on a Yokota torque tester (YET series), with 0.63 MPa air pressure (dynamic). This is a static torque tester. Torque values may differ with other measuring equipment and/or joints (hard/soft).

Model YET-501C	5 - 50 Nm
Model YET-2001C	20 - 200 Nm
Model YET-5001C	100 - 500 Nm

**Service sets containing:** O-rings, back-up rings and springs for impulse mechanisms required for oil change.

### 3. Ratchet wrenches

#### Applications

#### Toku

Toku ratchet wrenches are used for industrial workshop applications.

#### Red Rooster

Red Rooster Automotive (RRA) ratchet wrenches are used for light workshop applications.

#### Yokota

Yokota ratchet wrenches are used where accurate torque is required while the accessibility is limited. By turning the wrench 180 degrees the connection can be loosened as well.

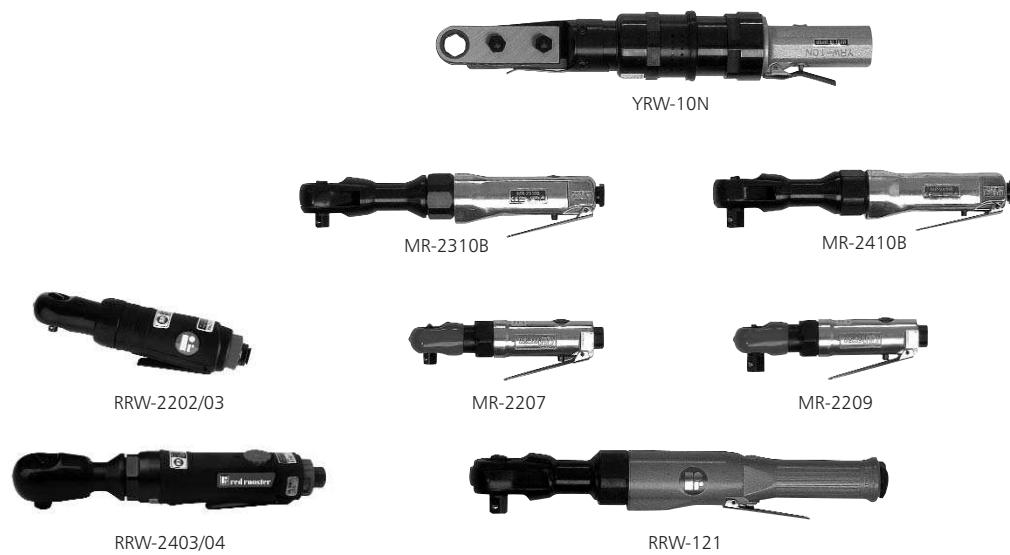

##### Impact sockets

Choose the right size impact socket for your ratchet wrench. If the sockets do not fit exactly this may cause a loss of power and wear of the anvil. For detailed information about the impact sockets we refer to the chapter with Action impact sockets. Extension bars, universal joints and adaptors are also available.

### Impact sockets

Choose the right size impact socket for your ratchet wrench. If the sockets do not fit exactly this may cause a loss of power and wear of the anvil. For detailed information about the impact sockets we refer to the special chapter Action impact sockets. Extension bars, universal joints and adaptors are also available.

## 4. Screwdrivers

### Applications and mechanisms

Screwdrivers are available with various impact mechanisms. Each application has its own mechanism. Therefore please take note of the information below before purchasing a tool.

#### **I-Hammer**

The 1-hammer system makes 1 impact per rotation at 1 side of the anvil. This causes a higher energy per blow. The screwdrivers with the 1-hammer system are especially suitable for wood and steel screws.

#### **2-Hammer**

The 2-hammer system makes 2 impacts per rotation at both sides of the anvil. This mechanism is used for wood and steel screws and works more quiet than the 1-hammer system.

#### **Direct drive**

These direct drive screwdrivers are suitable for selftapping screws and wood screws.

#### **Clutch mechanism**

Screwdrivers with a clutch type mechanism are used for standard applications with normal joints. The mechanism works by means of spring pressure. When reaching the torque the mechanism slips.

#### **Shut-off mechanism**

To comply with the ever increasing demands for screwdriving accuracy and work safety, we present a new range of pneumatic screwdrivers with a maximum torque repeatability. Along with the exceptional torque accuracy, the new Jointech Plus 2 torque control system has automatic high speed air shut off to allow for a considerable reduction of the reaction to the operator's hand.

\* Models are supplied with 3 different torque springs (light - medium - heavy), to set different levels of torque.

### Spring balancers

In order to support the weight of tools, the use of a spring balancer should be considered. The performance of the tool will be speeded up due to good balance and reduced operator fatigue, when using a spring balancer. For more information we refer to the special chapter (page 136-137).

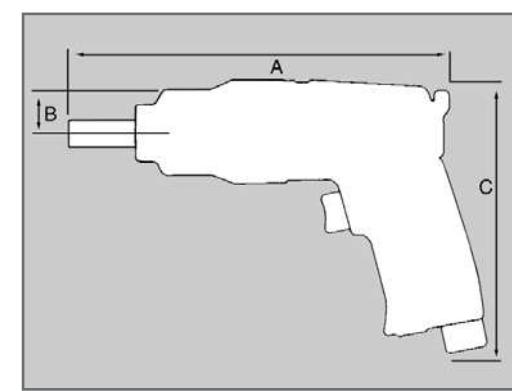

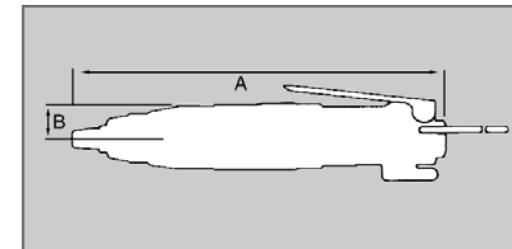

The YD-400SCA and YD-5PHCA are supplied as standard with set screw spanner number 2201-0234-00-00.

Automotive models RR-550 and RR-580 are supplied with 3 torque springs (10 Nm low, 12 Nm medium and 16 Nm high).

## 5. Drills

### Various models

### Drills

The drills are suitable for a large number of applications. Both for use in the industry, steel and aluminium processing, car manufacturing, truck manufacturing, home electrical appliances, but also the general use in the workshop is covered.

The Yokota drills are executed with a 2-step trigger. The first step is used for setting the drill in the right spot of the workpiece, the second step is used for drilling the hole at high speed. The silencers can be turned 360 degrees.

Please take care to choose the right drill for the right capacity. Capacity and RPM of the tool are designed to fit to each other.

## 6. Dowel pin pullers

For matrix, casting and press-moulding

### Dowel pin pullers

The Yokota dowel pin puller is used in matrix, casting and press-moulding industries, for setting and removing dowel pins in moulds or presses. The dowel pin puller is an easily operated air tool and can simplify the pulling or hammering operation of the threaded dowel pins, saving time and improving working efficiency.

#### Pulling operation

- Screw hanger bolt to threaded pin
- Fit dowel pin to guide hole
- Lock hanger bolt
- Operate the tool to pull up the pin

#### Hammering operation

- Screw hanger bolt to threaded pin
- Fit dowel pin to guide hole
- Operate the tool to hammer dowel pin
- Start the tool

## 7. Grinders and sanders

### Applications

#### Die grinders

Die grinders of the brands Yokota, Toku and Red Rooster are used for most light dressing / fettling applications on fabrications and die setting sets.

#### Angle grinders

Also angle grinders of the brands Yokota, Toku and Red Rooster are available. Suitable for fettling / fabrication of steel / cast iron.

#### Vertical grinders

Yokota's vertical grinders are used for various applications. Suitable for fettling / fabrication of steel / cast iron.

#### Straight grinders

Type GS-2EFS is a Yokota straight grinder. This grinder is used for fabrication and medium grinding applications. Type TSG are Toku straight grinders.

#### Sanders

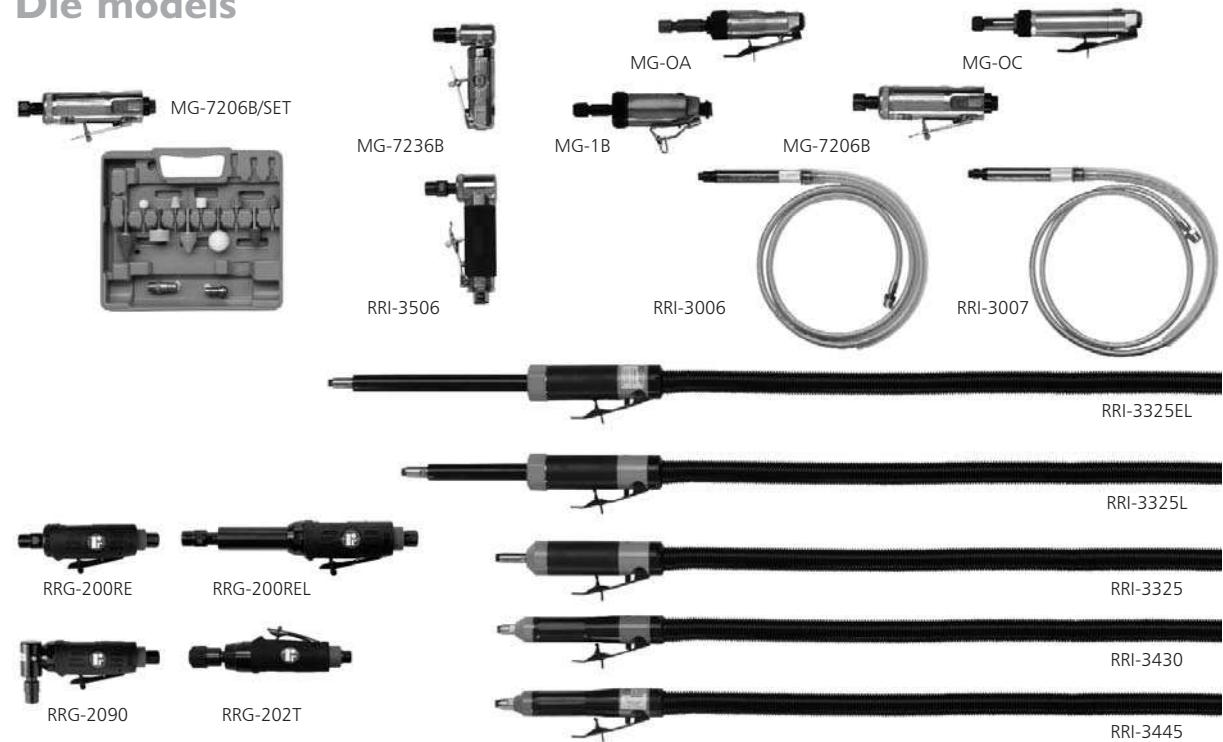

The sanders are available in various models, suitable for metal finishing and woodworking applications.

#### Belt sanders

The Red Rooster belt sanders are suitable for nearly all materials, e.g. steel, aluminium, plastics and wood and for use as a de-burring method in difficult access fettling applications. All belt sanders are executed with safety handle and adjustable silencer.

\* Angle model

\*\* Tire buffer

Collet chucks for die grinders are supplied with the tool.

The RRI-3325L and RRI-3325EL are the same. However model RRI-3325EL is supplied with an extended spindle (not suitable for wire brushes).

Types MG-7236B, RRI-3506 and RRG-2090 can only be delivered with an angle head. The only exception with die-grinders! Note: MG-7206B and RRG-200RE also in set (including assortment of burrs).

EF safety trigger (all other grinders have a safety lever)

\* Vibration reduced handle

\*\* Adapters on page 71.

RRG-models are supplied with flanges for wheel thickness of 0.8 - 6 mm.

TAG-45MLH and TAG-50MLH are supplied with flanges for wheel thickness of 1,6 - 6 mm.

All angle grinders are supplied with side handle, with exception of model G-40SRF. All TAG- and RRG-models are supplied with vibration reduced side handle.

Flanges for cup wheels and a tool service set for mounting the flanges are supplied with all grinders.

Both Yokota and Toku straight grinders have double rows of bearings for long lifetime.

All vertical and straight grinders have a governor wheel for regulating the right speed of the grinding wheel. This reduces the risk of overspeeding and assures the best material removal.

Flanges for cup wheels and a tool service set for mounting the flanges are supplied with all grinders.

RRS-6004 3K	RRA	75	2.500	0.3	-	4.9	0.90	PT 1/4"	10	0.74	88

The ROLOC™ system ensures fast and secure change of discs

RRS-6001 and RRS-6004 are supplied in a blow mould case, complete with the first sets of abrasives: 10 x grain 80, 10 x grain 100, 10 x grain 120 and surface prep-pads.

RRG-3617K is the same as model RRG-3611, however supplied as set. This set contains a sanding arm 6 x 330 and a sanding arm 10 x 330 mm (1 tool, 2 applications).

RRI-6 series are standard supplied with Velcro pad. Adhesive pads are optional.  
NV = non vacuum  
CV = for central vacuum  
SV = self vacuum, supplied with dustbag

## 8. Hammers

### Applications

### The right hammer for every application

The air-hammers are developed for different uses. Whether you need to chip welding flux, do after-working on casted material, or even want to open up the asphalted street, we will supply the right hammer.

#### Vibration-reduced

Apart from noise generated by hand held pneumatic air tools, the inherent vibrations are a health risk for everyone who has to work with such tools over a longer period of time. People who work with pneumatic hammers on a daily basis are subject to the so called "white finger disease". Painful inflammation can be the result and under special circumstances, such as hard knocks hairline cracks in the bone mass can appear.

Passive measures to reduce vibration such as special gloves have not provided the desired success. Red Rooster has reduced the vibration through design measures to an acceptable level.

## 9. Needle scalers

### Applications

### Surface treatment

The needle scalers can be used to remove rust, old paint-layers or concrete from surfaces. Also the removal of welding flux form the welding seam is made easy by using the appropriate needle scaler. A wide range of shapes and sizes is available.

### RSI

Repetitive strain injury, repetitive stress injury, or RSI is a term that most people have heard of. RSI is really a blanket name that is used to describe many different types of soft tissue injury including carpal tunnel syndrome and tendonitis. A mixture of bad ergonomics, poor posture, stress, and repetitive motion usually causes it.

If you work with needle scalers on a daily basis you are certainly at risk from repetitive strain injury. It may not be life threatening, but RSI has the potential to cause crippling disability and pain. Early treatment is the key to success, because recovery can be a very slow process. Better of course is prevention.

#### How to avoid RSI?

- A well-balanced power to weight ratio
- Vibration reduced to a minimum
- A rubber handgrip will dampen some of the vibrations and gives the operator a smooth and good grip.

# Needle scalers

## 10. Power cutters

### Applications

### Cutting and pressing

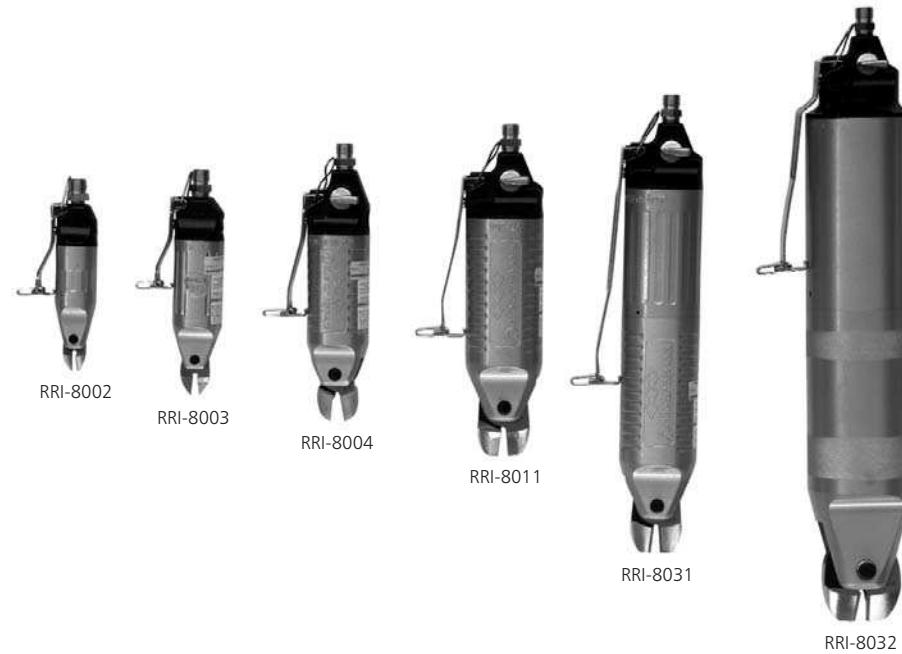

Power cutters have simplified cutting and pressing in mass production. Versatile applications of the power cutter by selection of suitable blades, make it possible to increase production. The working pressure is 4 - 5 bar. Blades for power cutters are delivered separately.

Note: Only cut your piece of work in this area of the blade.  
Do not twist the tool when cutting!

Cutting here will cause damage to the blade!

## II. Saws

### Applications

In our program you will find five saws for four different applications:

#### **Red Rooster jig saw RRI-8100**

Suitable for wood working and light metals. Type RRI-8100 is executed with the SDS-Clic System. This saw is often used for coach-work building

#### **Red Rooster reciprocating saws RRI-8205 and RRI-8210**

Especially suitable for coach work. Also for other materials like aluminium, plastics, wood, steel, etc. Both models are vibration reduced.

#### **Red Rooster pipe saw RRI-8460**

This saw can be used for pipe sawing up to a diameter of 530 mm. The saw has noise reduction and is suitable for all standard available saw blades. Clamps are optional.

#### **Red Rooster chain saw RRI-8550**

The chain saw is for use on general timber cutting and is supplied with the Sandvik blade and chains.

## I2. Special tools

### For the (assembly) industry

### Tip dressers

Everybody knows of the problems with worn tips when working with spotwelding machines. They produce either poor welds or no welds at all. It reflects the quality and productivity of your work. Of course you can replace the tips for new ones, but it might be a better idea to recondition the worn tips by means of Yokota tip dressers.

Dressing can either be done by the operator by hand (YNR-type) or the tip dressers are integrated into the cycles of a spotwelding robot and programmed according to your own needs and wishes (TDN-type). The Yokota tip dressers do not only clean the surface, but also the original shape and edges of the tips are restored.

### Hog ringers

The Yokota hog ringers are used for the assembly of car-seats, chairs, beds, fencing, etc. This tool is used to fix the cushion material or the leather material on the seat-frame with hog rings.

## I3. Various tools

### For several applications

### For every workshop

These airtools should be available in every workshop. The engraving pen helps you to mark your (hand-)tools and produce type. Blow guns can be supplied in a simple Red Rooster variant or in a SMC model which will save you air... and thus money.

### Riveters

The Red Rooster riveters work with the most usual sizes of rivets. If the current handtools for the rivets are a burden to your employees, use the Red Rooster air-riveter.

### Multi-cutter

The Red Rooster multi-cutter RR-476 is a true multi-talent. Sawing, sanding and cutting with only one tool.

### Pumps

The Yokota YP pumps are high-quality sump pumps for use on board of ships. The pumps are made of bronze and especially suitable to use in acid environments.

The Yokota barrelpump YPP-1 is developed to pump liquids from barrels, such as fuel, oil, water or chemicals.

7003-1014-11-11 9010-1026-11-11

### Dimensions

Type	A mm	B mm	C mm
YPP-1	606	68	-
YP-18	525	189	250
YP-35	550	270	320

Type YPP-1 has been developed for pumping liquids from drums. The pump fits on standard oil-drums with a normal 1 1/2" pipe thread opening. The models YP-18 and YP-35 are manufactured throughout in bronze and are suitable to pump aggressive liquids, like seawater.

## 14. Air chain hoists

0.125 - 100 tonnes

### Red Rooster

The Red Rooster range of hoists is widely used both On- and Off-shore, throughout the world; typically in marine, shipbuilding, chemical and petrochemical, food, paint and papermaking industries, wherever reliability of performance and safety in use are paramount.

Red Rooster air chain hoists are compact in design and low in headroom. The hoists have infinitely variable speed, and are rated for continuous use. Another advantage of the air hoists is the soft start and stop. Air hoists do not impose shock loading during acceleration and deceleration. The Red Rooster air hoists are of compact construction with cast iron bodies for durability and safety.

#### Various models

The hoists may be of hook suspension or supplied with the options of manual or pneumatically driven trolleys. Load chain conforms to EN-818-7. All models are supplied with cord (C), which affords the user simple but precise control of the hoist. Additional options are pilot pendant (P) or light weight pendant (for applications in zone 1 areas). Hoists from 0,5 tons and bigger are supplied with built-in load limiter. All hoists are supplied with internal disc brake.

Design F.O.S. 5, proof load 1.5 x W.W.L., internal silencers, explosion proof motor, automatic upper and lower limit switches. Spark resistant air chain hoists are available on request.

#### Air trolleys

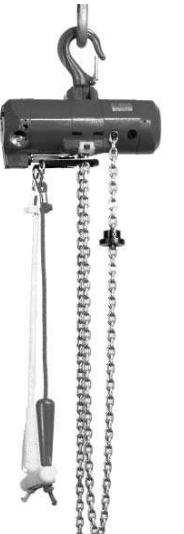

The air trolleys have a good price/quality ratio. The wheels are made of steel or bronze (on request). Constructed with sealed wheel bearings. Adjustable to cover a range of beam flange widths. A worm gear box prevents run on.

#### Users

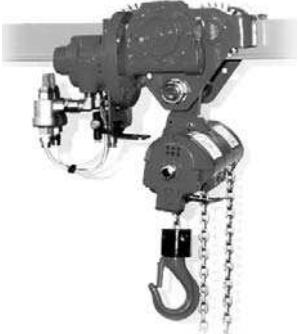

Shell UK, BP, Marathon, Mobil, Unocal, ICI, Pfizer, P&O, Triumph, Rockwater, British Coal, Leyland DAF, Thyssen, Repsol, Basf.

## Compact hoists

**For material handling**

TMM-140AE

Type	Capacity t	Lifting speed full load m/min	Lifting speed without load m/min	Air consumption full load l/sec	Weight kg
TMM-140AE	0.14	11.0	15.0	8	9

Detailed information on pages 112-113.

The red rooster compact hoists are excellent for material handling, particularly for production handling to and from bench level or for mating of component parts during assembly. The controls are mounted adjacent to the bottom hook, enabling the operator to precisely control the load whilst raising and lowering, with one hand.

The hoist operates up to two meters lift height (as far as a man can reach in comfort). Where the process requires the load to be raised traversed and then lowered, the hoist may be combined with a trolley on an overhead runway or C track. Top and bottom end limits are included to prevent over-hoisting and over-lowering, whilst an Emergency Stop (red, mushroom head) is located immediately adjacent to the control levers (cutting off the air supply in the event of an emergency).

The TMM-140AE has a reversible handgrip for left or right hand operation. The handgrip is rubber covered. The raise and lower operating triggers afford the operator precise, variable speed control.

**TMM-140AE**

1. Push buttons near the bottom hook
2. The operator can steer the package with one hand
3. Better comfort and safety for the operator

# Air chain hoists

0.25 - 6 tonnes

This Red Rooster hoists have a cast steel body and feature proportional speed control via the fail-safe control valve. Mechanical paddle action upper and lower limit switch prevents over hoisting and over lowering, whilst the bottom hook (with safety latch) is mounted on low friction bearings enabling it to rotate under load.

In standard form the hoist may be used in CENELEC Zone 2 hazardous areas (explosive gases), whilst all types are also available in "spark resistant" form for use in CENELEC Zone 1 hazardous areas. Full details of "spark resistant" hoists can be found on page 016 of this catalogue. The hoists are also available in "Clean Area" form for use in the pharmaceutical, food and research industries.

Red Rooster specializes in the design of hoisting systems tailored to meet specific applications. Internal silencing, fail-safe totally enclosed disc brake, sealed precision epicyclic gearbox, precision machined and hardened load and idler wheels and line pull limiter serve to make the hoists safe, reliable and well engineered production tools. All pendant control types are available with an emergency stop (red, mushroom head) to meet European Machinery (Safety) Directive. All types may be supplied with hook top suspension or combined with trolleys.

\* Supplied as standard | + = on request | # = also available in shackle execution

C = cord control | DP = direct pendant control with emergency stop | P = pilot pendant control with emergency stop

Note - Chain, SMC filter and SMC lubricator are supplied on request.  
- 4- or 6-pendant control with emergency stop on request

All hoists are supplied as standard with 2 m. control, with exception of type TMM-140A; standard with cable, air hose, pilot pendant control and 2 m. height of lift.

Features of the shackle execution: a lower head room, lower weight, easier to load the hoist and easy mounting by double pad eye.

EN-818-7 chain is standard for all air chain hoists, with exception of models TCR-125 and TCR-250. For these models a Heavy Duty (HD) chain is available. All chains supplied on request.

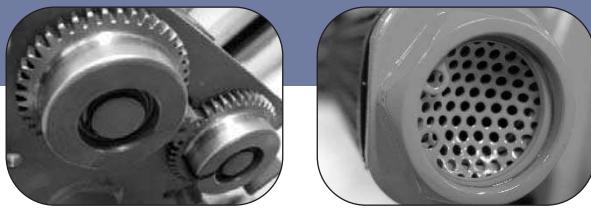

SMC AF Filter

SMC AL Lubricator

Note Push & geared trolleys on request built on and hook on (also for spark resistant models).

All Red Rooster air trolleys are adjustable for various runway beam widths and types. Flanged trolley wheels running on sealed bearings are driven by an open precision machined pinion. The powerful rotary vane motor and enclosed gearbox afford the user proportional, smooth speed control and positive braking.

Anti-drop plates and anti-tip rollers are included as standard safety features; whilst rack and pinion drive, pneumatic end limits and swivel top suspension bearings (for use on board ship and for BOP handling on offshore drilling rigs), are available as options.

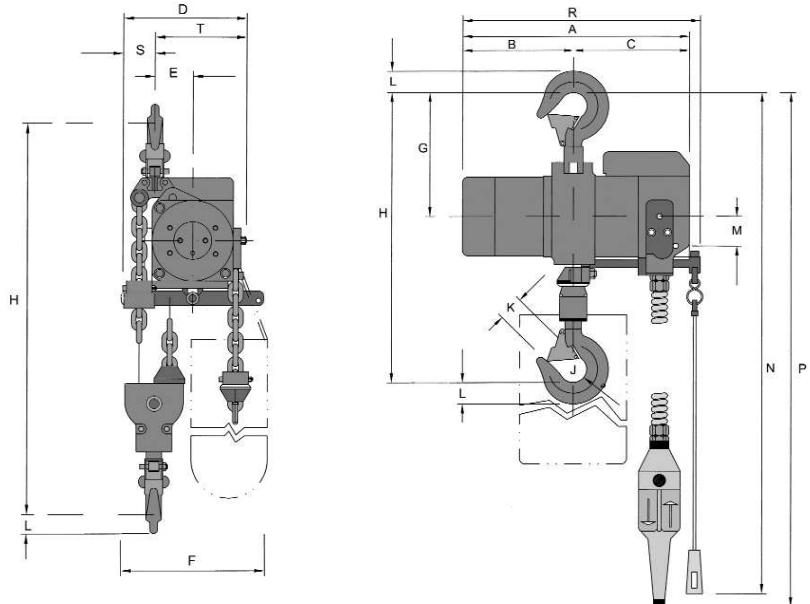

Standard trolleys are supplied with cast iron wheels. The spark resistant models have been manufactured with bronze wheels. Air trolleys for air chain hoists up to 100 t on request.

Bronze wheels

### Chain selection!

Standard	Heavy Duty
6.3 x 19,1	6.3 x 19,1 S
7,1 x 21	7,1 x 21 S
11,2 x 34	11,2 x 34 S
16 x 45	16 x 45 S
22 x 66	22 x 66 S

Red Rooster hoists are standard supplied with a galvanized chain according to EN-818-7. If the hoist is intensively operated, constantly max. loaded, or used for rental jobs, we advise to use the higher quality chain. A Heavy Duty chain has a much higher resistance against wear. Lubrication of the chain may increase the life-time to 10 times.

Note      Larger models available on request  
TCS-500 on request

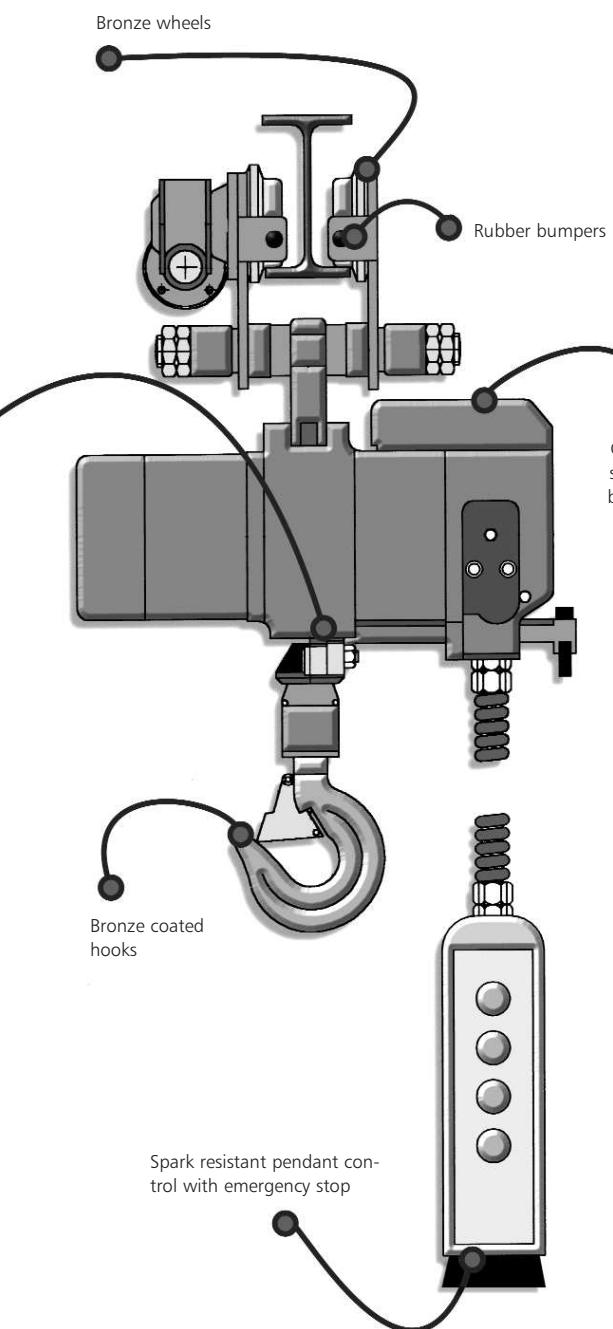

4-button control with emergency stop to operate hoist and trolley at the same time.

All hoists are dynamically tested in our workshop with actual load. All overload tests are carried out with 150% x W.W.L. Hoists are supplied with a test certificate. The test bench itself has been calibrated and certificated by TNO certification and meets the requirements according to NEN-EN 818.

# Air chain hoists

## Spark resistant

In production- and storage operations, inflammable gases, vapours and mist combined with air, may form an explosive atmosphere. Such gases and vapours are classified under European norms. These hoists are therefore supplied with an "ATEX" certificate.

Our standard hoists are classified as follows:  
E Ex II A T6 CE Ex II 3GD (and may be used in zone 2).

Our spark resistant hoists are classified as follows:  
E Ex II A/IIB T6 CE Ex II 2GD (and may be used in zone 1).

Exception is the mini hoist TMM-140AE.

### Red Rooster spark resistant hoists are executed with:

- Cast steel body <sup>1) 2)</sup>
- Bronze coated hooks <sup>3)</sup>
- Stainless or INOX steel chain
- Spark resistant pendant control with emergency stop
- Heavy Duty rubber collision bumpers on trolley
- Bronze wheels on trolley
- Nickeled hook used for the food industry

<sup>1)</sup> Copper plated sprockets on request

<sup>2)</sup> Marine paint on request

<sup>3)</sup> Stainless steel on request

## Applications

Our spark resistant hoists are widely used in a.o. the On- and Off-shore, (petro)chemical industry, mining, paint industry, paint spraying, chemical production and -storage, pharmaceutical industry, tank-cleaning.

# 15. Winches

0.2 - 35 tonnes

Red Rooster air winches are custom made products. Many constructions are possible, and there are many norms and selection criteria for choosing a winch. In this foreword we discuss several of these to help you in your selection.

## Applications

Hoisting and pulling of various equipment and loads on ships, offshore, shipyards etc. For manrider winches, please send your enquiry.

## Standard winches, RRI series

- Vane type motor
- Standard band brake and automatic brake
- Free-wheel
- Very compact design as air motors are partially contained inside the drums
- Rugged but lightweight construction
- Easy installation and removal
- Safety type throttle provides flexible speed control, shuts off automatically when released
- All steel

## Optional

- Silencers
- Air treatment unit, consisting of filter, regulator and lubricator

## Electrical winches, RRI series

Please contact your local supplier!

## LV series - pneumatic wormgear winches

For pneumatic winch applications demanding light weight construction, this range of explosion proof winches provides the solution. The use of vane type motors and inherently safe self braking worm gears ensures trouble free operation and low maintenance is required. These winches find their use in general industry, oil and gas exploration, and in many places where compact explosion proof hoisting gear is required.

The range includes two fast speed types, the LV-256 and LV-508, which also have optional carrying handles, and slower speed types up to 2000 kg lifting capacity.

The self braking characteristics of the worm gear drive combined with closed ports is sufficient for almost all hoisting purposes. For accurate positioning of a load an additional brake may be necessary. Please consult our sales department in this case.

**Standard features**

- Self braking worm gear transmission
- Rotary vane motor
- Steel drum (not grooved) with cable fixing point at flange
- Two drum supports
- Single layer 1 component conservation (color BS 20 medium blue).

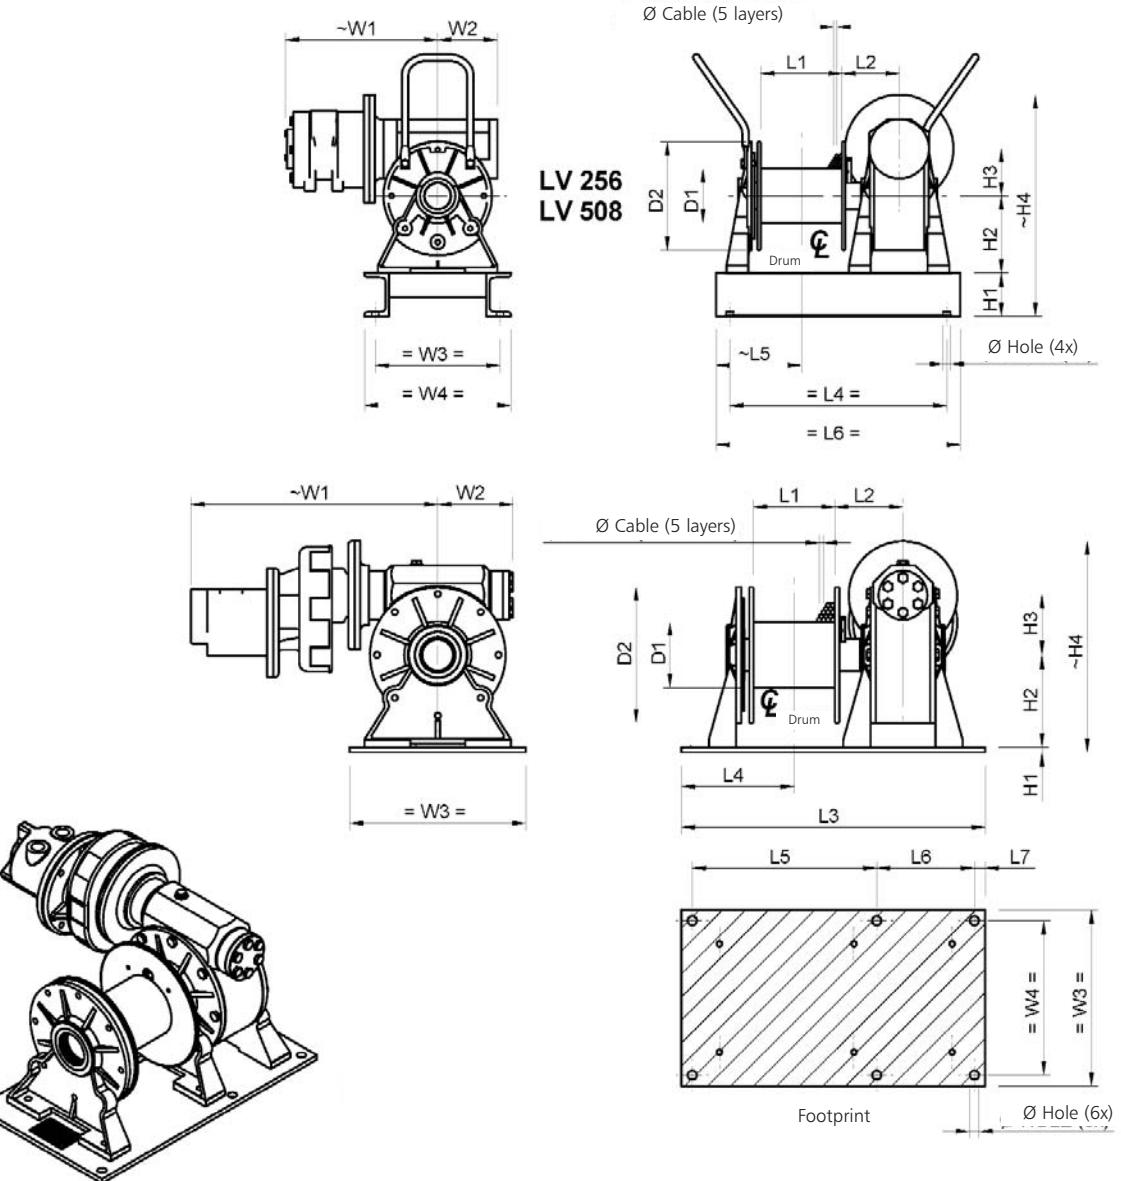

**Options**

- Manual disengaging clutch
- Band brake, manual or automatic fail safe
- Grooved drum
- Drum pressure roller
- Alternative speeds
- Alternative drum dimensions / split drums / additional rope encores, etc.
- Motor position vertically up
- Drum guard
- Emergency cranking
- Marine / offshore coating system

**Available control options**

- Proportional control valve, local or remote
- Pneumatic limit switch
- Pneumatic slacke wire switch

## SB series - standard build planetary winches

The standard build SB type winch provides the basis of the solution to many pulling and lifting winch applications. The winch is constructed in the conventional manner with motor, gearbox and drum in line. This range of capacities can go up to 70 tonnes lifting capacity. Although the name of this winch indicates different, these winches are very suitable to fit to your specific winch application. Many options can be offered on these highly versatile winches.

### Standard features

- Heavy duty planetary gearbox
- SB E: IP 54 aluminium braked motor 400 VAC / 3 phase / 50 Hz. (440VAC/ 3 phase / 60 Hz)
- SB H: orbit or radial piston type hydraulic motor complete with brake valve
- SB LPR: radial piston type air motor complete with hand control valve and mufflers
- Steel drum with cable fixing point at flange
- Two drum supports
- Single layer 1 component conservation, (colour BS 20 medium blue).

### Options

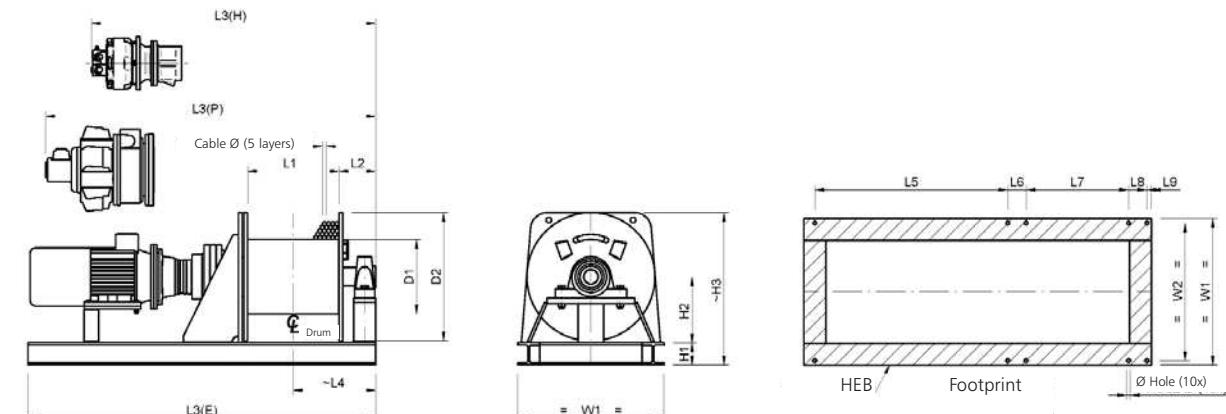

- IP56 TENV cast iron motor for marine applications
- Explosion proof motors
- Protective steel motor cover
- Drum pressure roller
- Band brakes: manual/failsafe autom.
- Manual disengaging clutch
- Alternative speeds
- Alternative supply voltages
- Drum guards
- Spooling gears
- Grooved drums
- Manual emergency crank
- Slip ring mounting
- Alt. drum dimensions / split drums / add. rope anchors / etc.
- Warping head
- Marine / offshore coating systems

### Available control options

- Control box IP 55 with push buttons and emergency stop built acc. to NEN 1010
- Control box IP 55 with low voltage IP 65 remote control built acc. to NEN 1010
- Load limiter (required by CE for applications exceeding 1000 kg W.L.L.)
- Radio /Infra red remote control
- Frequency inverter for variable speed control
- Limit switches (electric, pneumatic or hydraulic)
- Slack wire switches (electric, pneumatic or hydraulic)
- Proportional local or remote control valve (pneumatic or hydraulic)

# Winches

## FD series - planetary crane winches

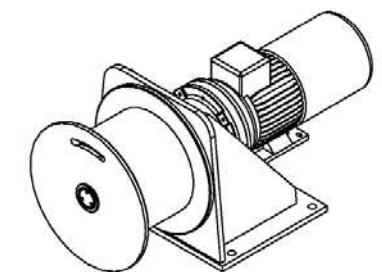

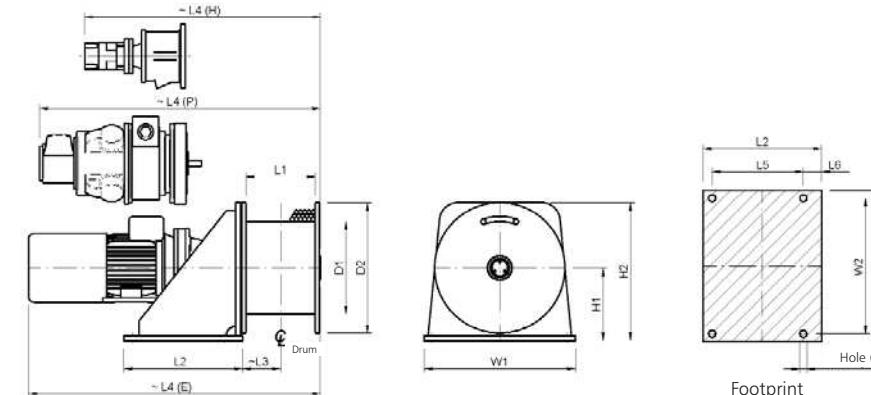

Specially designed for applications where space is at a premium, these compact and light weight lifting winches are ideally suited for installation on cranes, davits and derricks. The single drum support enables the rope to leave the drum at any angle. The heavy duty planetary drive is partly located within and protected by the drum core. The large drum diameters ensure a healthy drum to cable diameter ratio and a sufficient working length despite the short drums.

Working loads up to 8 tons could be possible for these winches, please ask for our offer.

#### Standard features

- Heavy duty planetary gearbox
- FD E: IP 54 aluminium braked motor 400 VAC / 3 phase / 50 Hz. (440VAC/ 3 phase / 60 Hz)
- FD H: orbit or radial piston type hydraulic motor complete with brake valve
- FD LPR: radial piston type air motor complete with hand control valve and mufflers
- Steel drum with cable fixing point at flange
- Single drum support
- Single layer 1 component conservation, (colour BS 20 medium blue).

#### Options

- IP56 TENV cast iron motor for marine applications
- Explosion proof motors
- Protective steel motor cover
- Drum pressure roller
- Alternative speeds
- Alternative supply voltages
- Drum guards
- Marine / offshore coating systems

#### Available control options

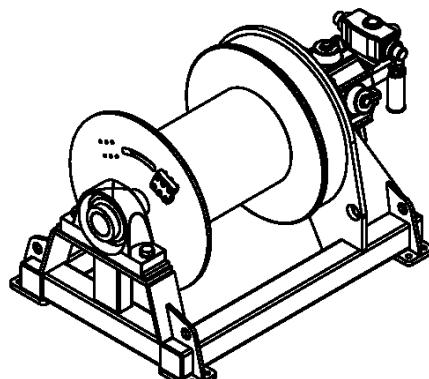

- Control box IP 55 with push buttons and emergency stop built acc. to NEN 1010
- Control box IP 55 with low voltage IP 65 remote control built acc. to NEN 1010
- Load limiter (required by CE for applications exceeding 1000 kg W.L.L.)
- Radio / Infra red remote control
- Frequency inverter for variable speed control
- Limit switches
- Slack wire switches
- Radio / Infrared remote control

# Winches

## OAW series - Offshore air winches

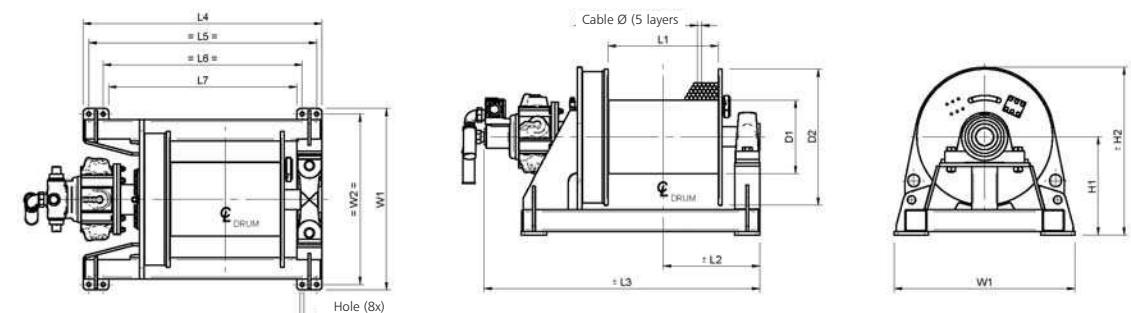

A range of compact lifting and pulling air winches specially designed for offshore applications and any other hazardous environment where space is limited. The heavy duty planetary gearbox and brake are mounted within the drum core, which both save space and protect from any external damage. Winches designed to meet independent third party requirements, like Lloyds, ABS, DNV, etc.

These standard winches can be fitted with several options and accessories. Further two of the winches are man riding prepared, adding some options and reducing the W.L.L. means that the winch can be used for man riding applications too. For Pod Line and Guide Line operations two standard winches are available with tall flanges and longer drums to accommodate cables up to 2000 meters.

#### Standard features

- Heavy duty planetary gearbox integrated in gearbox
- Cast steel five cylinder radial piston motor
- Proportional biased throttle valve
- Exhaust silencing mufflers
- Steel drum, length 610 mm with cable fixing point at flange
- Two drum supports
- Standard temp. range -10° to 50°C
- Oil bath disc brake
- Lifting lugs
- Offshore multi layer 2 component conservation (color RAL 1023 yellow).

#### Options

- Alternative drum lengths
- Drum pressure rollers / Drum guards
- Drum locking pins / Drum dividers
- Band brakes (manual or automatic failsafe)
- Spooling gears
- Grooved drums
- Tubular offshore frame construction
- Special temp. range -40°C to +50°C
- Natural gas driven

#### Available control options

- Emergency main shut off valves
- Load limiters
- Limit switches (pneumatic)
- Slack wire switches (pneumatic)
- Proportional remote control valve
- Air service units
- Matching frame with IR, Atlas, Beebe, Chicago or Gardner

## 16. Accessories

### For air tools

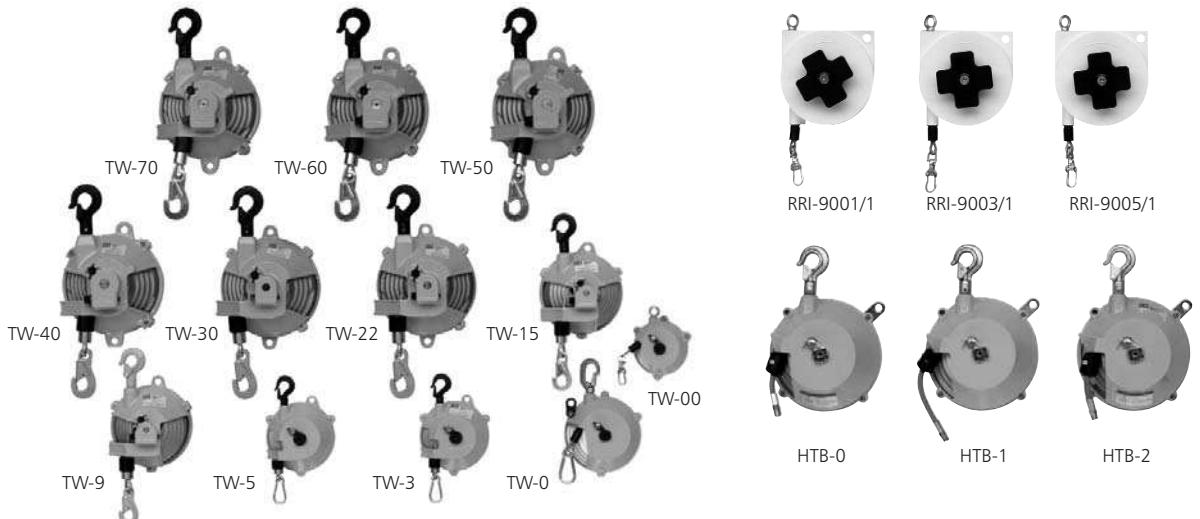

### Accessories program

Our delivery program is completed with a range of accessories for air tools. In this chapter you will find:

- (Spring)balancers
- Polyurethane air hoses
- Kombi-Kit
- Lubricating oil
- Mini-oilers
- Regulators

# (Spring)balancers

## Standard / Hosereel with integrated cable

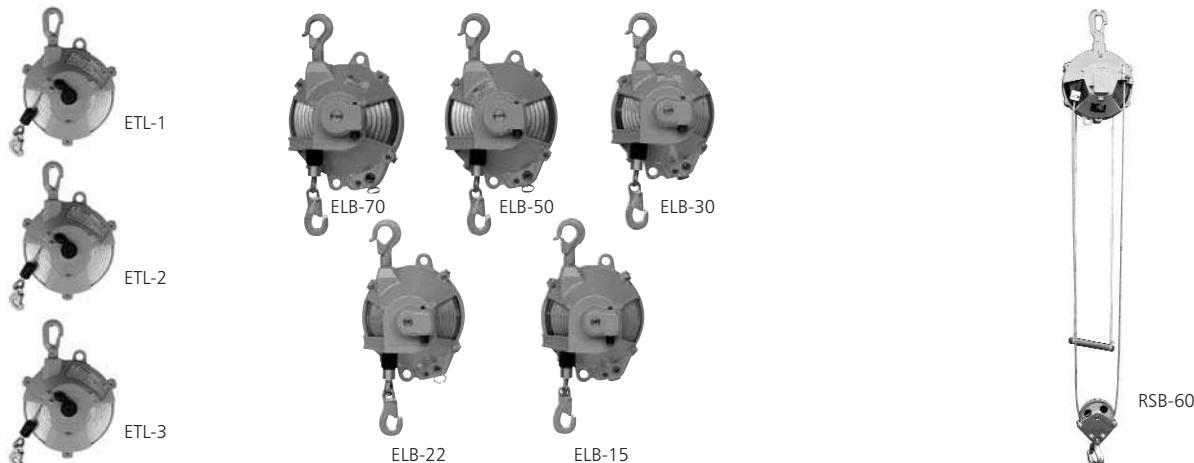

### Standard models

Type	Brand	Capacity kg	Cable length m	Weight kg	Hose diameter mm	Air consumption l/min	Inlet-thread

ETP-16	RRI	170 - 200	1.2	29.7	-	-	-

### Hosereel with integrated cable

HTB-0	RRI	0.5 - 1.5	1.3	1.58	6.5	700	PT 1/4"
HTB-1	RRI	1.5 - 3.0	1.3	1.66	6.5	700	PT 1/4"
HTB-2	RRI	3.0 - 5.0	1.3	1.73	6.5	700	PT 1/4"

## Long stroke / Ratchet mechanism

### Long stroke

Type	Brand	Capacity kg	Cable length m	Weight kg
ETL-1	RRI	1.5 - 3.0	2.5	4.1
ETL-2	RRI	2.5 - 5.0	2.5	4.2
ETL-3	RRI	5 - 9	2.5	4.7
ELB-15	RRI	9 - 15	2.5	10.0
ELB-22	RRI	15 - 22	2.5	10.2
ELB-30	RRI	22 - 30	2.5	11.0
ELB-40	RRI	30 - 40	2.5	14.0
ELB-50	RRI	40 - 50	2.5	14.5
ELB-60	RRI	50 - 60	2.5	17.0
ELB-70	RRI	60 - 70	2.5	18.0

### Ratchet mechanism

RSB-15	RRI	9 - 15	1.5	7.4
RSB-22	RRI	15 - 22	1.5	7.7
RSB-30	RRI	22 - 30	1.5	8.1
RSB-40	RRI	30 - 40	1.5	8.5
RSB-45	RRI	30 - 45	1.0	10.9
RSB-60	RRI	45 - 60	1.0	11.5

In order to support the weight of pneumatic, hydraulic and electric tools, the use of a spring balancer should be considered. The performance of the tools will be speeded up due to good balance and reduced operator fatigue, when using a spring balancer.

### Applications

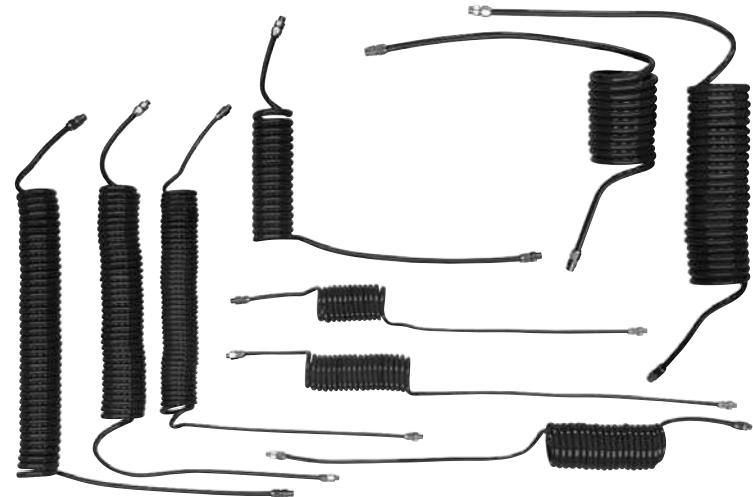

- When heavy tools/machines have to be portable
- Fitting of centre lathe chuck
- Transportation of parts in a production line

### Extra safety

- The models ETP, ETL, ELB and TW from TW-9 upwards have a safety mechanism which starts working in case of spring breakage.

# Air hoses

## Polyurethane

Optimal functioning

### Polyurethane air hoses

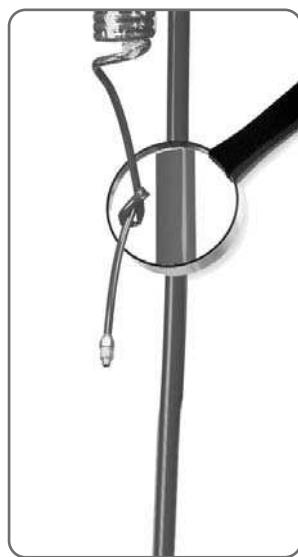

Type	Brand	Working-length m	Total length m	Inside diameter mm	Outside diameter mm	Joint connection
PT-02510SJ	RR	2	2.5	6.5	9.5	1/4"
PT-02525SJ	RR	4	5	6.5	9.5	1/4"
PT-02550SJ	RR	9	10	6.5	9.5	1/4"
PT-03525SJ	RR	4	5	8	12	1/4"
PT-03550SJ	RR	9	10	8	12	1/4"
PT-04525SJ	RR	4.2	4.7	9.5	13.5	3/8"
PT-04550SJ	RR	9	10	9.5	13.5	3/8"

### No kinks after bending!

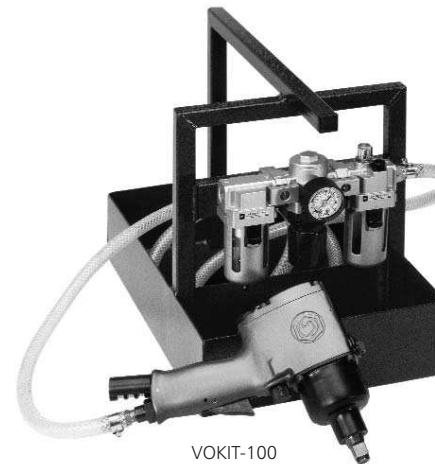

The hose stretches easily and retracts automatically. This increases productivity and safety.

### Features

- Both ends executed with universal swivel-joints
- Provided with straight ends from 10 and 50 cm
- Increased flexibility, no kinks after bending
- Max. pressure 8 bar
- Oil and petrol resistant
- Temperature -20°C to +60°C
- Swivel executed with ballbearings
- Very well suitable for combination with balancers

## Combi-kit / Various

### VOKIT-100 Combi-kit

Type	Brand	Description	Height cm	Width cm	Depth cm	Height box cm
VOKIT-100	RR	Combi-kit	40.5	25.5	32	7

### Various

Type	Brand	Description	Quantity Liter*	Air consumption l/min	Air pressure max. bar	Inlet-thread
NO32	RR	Lubricating oil	1	-	-	-
NOBP	RR	Oil for impulse wrenches	1	-	-	-
PT-1025	RR	Mini-oiler	-	880	6.3	PT 1/4"
8130-1001-00-00	RR	Regulator	-	-	-	PT 1/8"
8130-1002-00-00	RR	Regulator	-	-	-	PT 1/4"

The combi-kit is a tool carrier complete with SMC filter/regulator/lubricator unit 3/8", type AC30-F03E + pressure gauge.

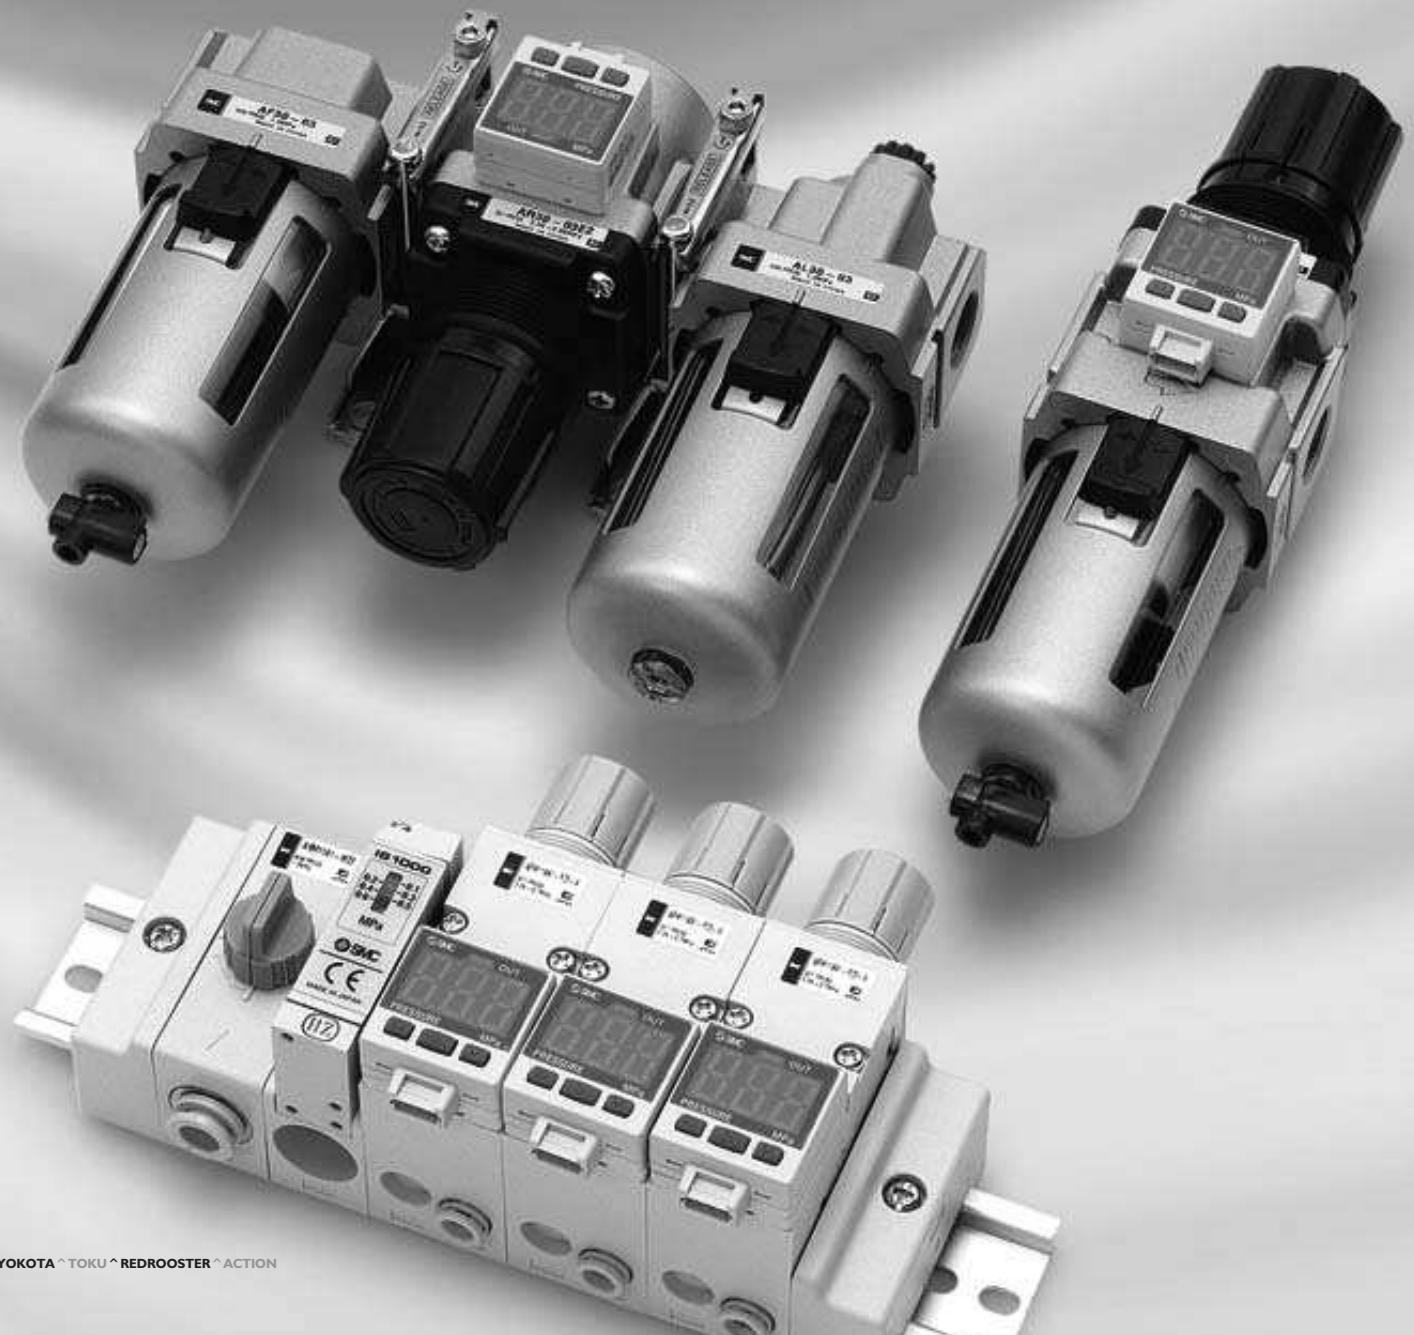

Yokota NO32 oil is especially developed for the lubrication of air tool systems. The oil increases the life span of your air tools considerable.

NO32 oil

# 17. Air treatment equipment

## Applications

### SMC

If the pressure is too low the tool will show less performance and less precision, resulting in slow starting and less productivity. 1 bar pressure reduction means 25% power loss.

Low pressure may occur if:

- The capacity of the compressor is insufficient
- The air piping has been pitched incorrectly
- There are air leaks
- The air treatment equipment is not functioning properly and/or is not pitched correctly
- The wrong size hose nipples or quick couplers are used
- The tank is too small

### Waterseparators

With the SMC AMG water separators you can remove easily and cheaply 99% of water droplets. The water separators are compact and light weight. Available port sizes from 1/8" up to 2", therefore suitable for compressors (1-75 kW). Standard equipped with automatic drain for long term jobs.

### Filters

The SMC filters have exceptional large air flow and a high rate of filtration. The filters guarantee a high level of the air quality due to separation of condensate by the centrifugal working and filtration of pollution.

### Regulators

SMC regulators guarantee a constant secondary pressure, apart from fluctuations in port pressure or pressure decreases.

### Lubricators

For precise lubrication of machine components. From series 3.000 oil can be filled under pressure. Easy and precise adjustment. Lubrication already takes place with slight pressure drop.

### Air combination sets

Combination sets exist of AF (filter), AR (regulator) and AL (lubricator). Or the AW (filter/regulator combination) and AL (lubricator).

### Refrigerated air dryers

The SMC refrigerated air dryer series IDFA removes humidity from your compressed air system and extends thereby the life span of all of your air tools.

# Water separators

## AMG series

### AMG series - water separators

Type	Brand	Compressor kW	Nl/min	Port size Rc	Weight kg	Mounting brackets	Filter elements
AMG150-F02C	SMC	2.2	300	1/4"	0.38	BM51	AMG-EL150

AMG850-F20D	SMC	75	12.000	2"	10.5	BM57	AMG-EL850

Working pressure: 1.5 - 10 bar / temperature working area: -5 to 60° C.

Accessories like mounting brackets and filterelements available on request.

# Combination sets

## AC series - filter-regulator-lubricator (modular)

### AC series - combination of AF (filter), AR (regulator), AL (lubricator) and pressure gauge

Type	Brand	Port size	Nl/min	Filter micron	Bowl	Bowl with bajonet connection
AC20-F02E	SMC	1/4"	500	5 µ	Polycarbonate	o
AC30-F03E	SMC	3/8"	2.000	5 µ	Polycarbonate	s
AC40-F03E	SMC	3/8"	4.000	5 µ	Polycarbonate	s
AC40-F04E	SMC	1/2"	4.000	5 µ	Polycarbonate	s
AC40-F06E	SMC	3/4"	4.500	5 µ	Polycarbonate	s
AC50-F06E	SMC	3/4"	5.000	5 µ	Polycarbonate	s
AC50-F10E	SMC	1"	5.000	5 µ	Polycarbonate	s
AC60-F10E	SMC	1"	7.000	5 µ	Polycarbonate	s

o = optional, s = standard

Max. supply pressure: 15 bar / max. working pressure: 10 bar / temperature working area: -5 to 60° C.

### AC series - combination of AW (filter/regulator combination), AL (lubricator) and pressure gauge

Type	Brand	Port size	Nl/min	Filter micron	Bowl	Bowl with bajonet connection
AC20A-F02E	SMC	1/4"	500	5 µ	Polycarbonate	o
AC30A-F03E	SMC	3/8"	1.700	5 µ	Polycarbonate	s
AC40A-F04E	SMC	1/2"	3.000	5 µ	Polycarbonate	s

o = optional, s = standard

Max. supply pressure: 15 bar / max. working pressure: 10 bar / temperature working area: -5 to 60° C.

With the SMC water separators you can remove easily and cheaply 99% of water droplets. The water separators are compact and light weight. Available port sizes from 1/8" up to 2", therefore suitable for compressors (1-75 kW). Standard equipped with automatic drain for long term jobs. Long life due to the special resin with large mesh to reduce clogging.

You can use a water separator when:

1. Air does not have to be dry for 100%
2. Air dryer cannot be used
3. Air dryer is too expensive for needs

Note Mount filter as far away as possible from the compressor for optimal functioning.

On request

- Other combinations
- Automatic drain, normally opened (add CE for E in order number). For good functioning the drain line should have min. 8 mm diam. and should not be longer than 5 m
- Filtration 2, 10, 20, 40, 70, 100 µ
- Metal- or nylon bowls.

Polycarbonate bowls may be damaged and could possibly fail if they are exposed to synthetic oils, thinner solvents, trichloorethylene, kerosene and other aromatic hydrocarbons. If used in above atmosphere, please use a metal bowl (see page 149).

# Filters

## AF series (modular)

AF

## AFM and AFD series (modular)

AFM / AFD

### AF series - filters

AFD40-F06	SMC	3/4"	600	0.01 µ	Polycarbonate	s	AF40P-070AS

Max. supply pressure: 15 bar / max. working pressure: 10 bar / temperature working area: -5 to 60° C.

#### On request

- Other combinations
- Automatic drain, normally opened (order number + C). For good functioning the drain line should have min. 8 mm diam. and should not be longer than 5 m
- Filtration 2, 10, 20, 40, 70, 100 µ
- Metal- or nylon bowls.

Polycarbonate bowls may be damaged and could possibly fail if they are exposed to synthetic oils, thinner solvents, trichloorethylene, kerosene and other aromatic hydrocarbons. If used in above atmosphere, please use a metal bowl (see page 149).

#### On request

- Automatic drain, normally opened (order number + C). For good functioning the drain line should have min. 8 mm diam. and should not be longer than 5 m
- Metal- or nylon bowls.

The microfilters do have an exceptional large air flow and a high rate of filtration. They remove more than 99,9% oil. The filter should be replaced if the decrease of air pressure is 1 bar or more.

# Refrigerated air dryer

## IDFA series

The new SMC IDFA series of refrigerated air dryers are the result of over 40 years of experience combined with the latest compressed air and refrigeration technology. Built to international standards and backed by SMC's BS en ISO 9001 quality certification, the new IDFA series has nine standard models with nominal capacities ranging from 34 - 822 m<sup>3</sup>/h.

### Series IDFA Refrigerated Air Dryer

- State of the art design ensures a constant +3° C pressure dew point
- High efficiency heat exchanger
- Environmentally ozone friendly refrigerants
- Conforms to stringent ISO8573-1 standards
- Simple control system with easy to read evaporator gauge
- Compact design for easy installation
- High performance, reliable and trouble free

### IDFA series - standard specifications

Type	Brand	Inlet air-pressure (bar)	Inlet air-temp. (°C)	Ambient temp. (°C) *	Power supply voltage	Power cons. (W)	Air port connections	Refrigerant	Weight kg

\* Standard condition (ANR) with 20°C ambient temperature, atmospheric pressure and relative humidity of 65%. Performance data for pressure dew point in accordance with operating conditions from ISO7183 ( $P_i = 7$  bar,  $T_i = 35^\circ\text{C}$  (saturated), Cooling air temp. 25°C).

## Operating principle / Dimensions

### Operation principle IDFA refrigerated air dryer

Saturated compressed air enters the air-to-air heat exchanger. The incoming air is then precooled by the cold air exiting the dryer. The air then passes through the evaporator, where it is further cooled to a 3° C dew point. As the air cools, the water condenses to liquid which is removed by the automatic drain. The dry air is then passed back through the air-to-air heat exchanger where it is reheated before leaving the dryer.

### Dimensions IDFA series

### Banish moisture in your compressed air

Tests carried out by SMC, world leaders in pneumatic technology, have indicated that in certain atmospheric conditions the moisture contained in compressed air from a 75 kW compressor after one days operation could be equivalent to 113 litres of water.

Obviously any compressed air system containing this volume of air moisture will suffer from dramatically reduced valve and air cylinder per-

formance. Therefore armed with this knowledge, SMC's R&D engineers have now produced the perfect answer with their new range of Refrigerated Air Dryers - Series IDFA.

Designed specifically for the European market, with both CE accreditation and 230VAC (50Hz) voltage requirements, Series IDFA effectively removes water vapour through a highly efficient stainless steel, improved corrosion resistant, heat exchanger. With eight flow rate sized options - 34 to 822 m<sup>3</sup>/h (ANR), these new air dryers use ozone friendly HFC refri-

gerants - R134a / R407C - and emit outlet air at 3°C pressure point as per the ISO8573-1 standard.

Incorporating an easy to see evaporation temperature gauge, to confirm correct operation, Series IDFA is highly efficient with a low pressure drop when operating for improved energy savings.

### IDFA series - correction factors

Inlet air temp. (°C)	5-25°	30°	35°	40°	45°	50°
Correction factor A	1.30	1.25	1.00	0.83	0.70	0.60

		1.06	1.11	1.16	1.18	1.21
		1.23	1.25	1.26	1.27	

Corrected air flow rate [m<sup>3</sup>/h] = Customers air flow rate / (factor A x factor B x factor C)

## 18. Impact sockets

### Applications

### Action

If you work with impact wrenches we advise you to use the right impact socket with your specific tool in order to achieve the best result and the highest safety during the job. Also extension bars, Adapters and universal joints are available.

Surface Drive Sockets are used in places where fast assembling is required. The easy and fast fitting of the socket on the bolt makes it possible to put the socket on the bolt with a running tool and to make the joint.

Sleeve Drive Sockets have been developed by Action at the request of Yokota to improve the quality of a joint tightening with impulse wrenches. *Sleeve Drive Sockets minimize play between socket and tool thus reducing "wobble" and stabilizing the torque setting.* The use of Sleeve Drive Sockets is not only of benefit to the actual joint but also reduces vibration to the tool and operator, also reducing noise levels and tool wear.

All Action impact sockets are manufactured according DIN 3121 and DIN 3129. Universal joints and thin wall sockets are supplied without warranty.

*Worn sockets cause loss of power and wear to the square drive of the tool increases vibration to the operator. Replace your worn sockets in time.*

## Reduced Vibration!

Action sleeve drive power  
sockets are supported with  
an O-ring on the axle of the  
impulse wrench, giving a  
tighter fit on the tool.

## Sets

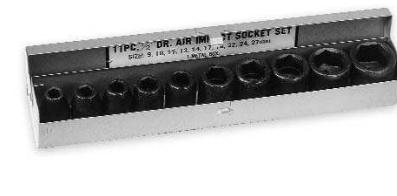

### 3/8" Impact socket set Type DO0038-0-010

#### Contents

10 Impact sockets, normal sizes

9 - 10 - 11 - 12 - 13 - 14 - 15 - 16 - 17 - 19 mm

Package: plastic tray & metal case

### 1/2" Impact socket set Type DO0012-0-000S

#### Contents

10 Impact sockets, normal sizes

9 - 10 - 11 - 13 - 14 - 17 - 19 - 22 - 24 - 27 mm

Package: metal case

### 3/4" Impact socket set Type DO0034-0-008

#### Contents

8 Impact sockets, normal sizes

24 - 27 - 30 - 32 - 33 - 36 - 38 - 41 mm

Package: plastic tray & metal case

### 1/2" External & internal Torx® impact socket set, Type DO69623161

#### Contents

9 Impact sockets thin wall Torx® external

E10 - E11 - E12 - E14 - E16 - E18 - E20 - E22 - E24

7 Impact sockets Torx® internal, length 55 mm

T40 - T45 - T47 - T50 - T55 - T60 - T70

Package: blow-mold case

### 1" Impact socket set, long Type DO69551041

#### Contents

4 Impact sockets, long size

27 - 30 - 32 - 33 mm

Package: plastic tray & metal case

### 1" Impact socket set, long Type DO0100-1-007

#### Contents

7 Impact sockets, long size

24 - 27 - 30 - 32 - 33 - 36 - 41 mm

Package: blow-mold case

# Impact sockets

## Sets

**1/2"** Special socket set for wheel nut lock  
Type DO0012-0-286

### Contents

7 Impact sockets, normal sizes  
17 - 18.5 - 20 - 21.5 - 23 - 24.5 - 26 mm

Package: blow-mold case

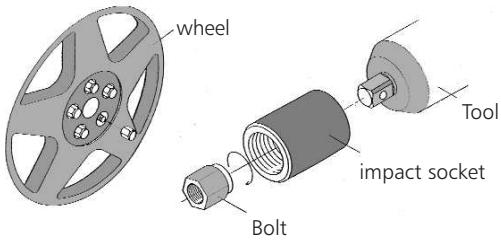

**1/2"** Special socket set for wheel nut lock  
Type DO0012-1-286

### Contents

8 Impact sockets thin wall, long sizes  
17 - 18.5 - 20 - 21.5 - 23 - 24.5 - 26 - 27.5 mm

Package: blow-mold case

## Application wheel lug nut remover sockets

15 Piece truckrepair set  
Type DO69643151

### Contents

5 Impact sockets Torx® internal T60, T70, T80, T90, T100 <sup>1)</sup>  
4 Impact sockets Torx® external E18, E20, E22, E24 <sup>2)</sup>

# 19. Chisels & drills

## Steelquality

Our factories only use steel qualities that is supplied conforming to the prescribed analyses. The most widely used steel for chisels is C70W2, for special chisels other materials can be used. Our factories check the right dimensions and tolerances and the material is continuously checked. Only a high quality of steel can be used for high quality of end-product.

## Production

Before and after the production, checks are being made. Not only the used steelquality but also the production machinery are controlled by a computer and if necessary adjusted, this is being done automatically in a lot of cases.

## Forging

After the machining, the points, flats and spades are forged. Often this is an automated process, the chisels are put in place by robot-arms and the chosen shape is forged. The heavy spades are forged manually. Drills for electric and pneumatic hammers are fabricated and processed on computer supported machinery. In the finishing process, the carbide tip is soldered on the drillstem.

## Hardening procedure

In automated hardening ovens, the temperature en time are controlled by a computer. Chisels and drills are placed in the ovens directly in big steel containers. All relevant information (date, temperature) are being stored in a computer, in order to follow back the complete procedure in case of a warranty claim.

## Finishing

If necessary, the chisels and/or drills are grinded. For cleaning, a new procedure is used with a waterjet system with a pressure of 200 bar.

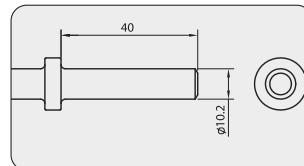

## Re-forging

The chisels will become blunt during the time that you work with them. They can be re-forged, this must be done by a craftsman. For this purpose, we have a "repair"-procedure. Further information can be obtained from our sales team.
