

# Wireless pairing guide

Part of the pairing process requires access to the buttons inside the AirBird®. It is therefore recommended to unscrew the top enclosure of the AirBird® device before starting process.

For further help to understand the overview of the configuration webpage - we recommend looking at the extended online manual on following link:

## Wireless Gateway - setup

### Accessing Gateway configuration website

A

- **Power on Wireless Gateway by inserting USB power cable. wait 1 minute before continuing.**

- **Use a paperclip or toothpick to press the Pair/Setup Button on your Wireless Gateway**

This action creates a wifi hotspot for you to connect and setup the gateway. The left most LED (power icon) will turn blue when its ready.

1

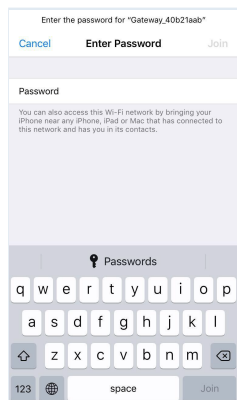

B

- **Open your phone's list of available WiFi look for \* "Gateway\_123456"**

\* The actual wireless name will be unique and different number sequence for your gateway.

1

C

- **Type default password for Gateway Wifi**

Default password is 12345678

1

D

- **Open your browser app on your phone**
- **select URL search bar and type: 192.168.4.1**
- **press enter / search**

Once connected to the wifi hotspot, your setup page should open automatically. If it does not, please follow the below steps.

2

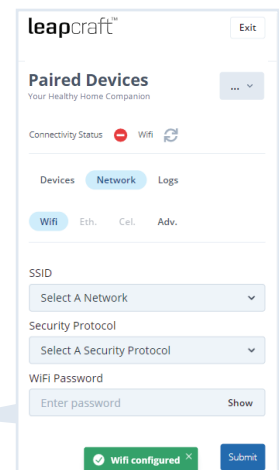

## Connecting your gateway to your wifi network

### Connecting your gateway to your wifi network

- **Go to the network Page on the configuration website**
- **Choose your Wifi for your Airbird from SSID dropdown bar**

\* Please note the gateway currently supports 2.4 GHz Wi-Fi only.

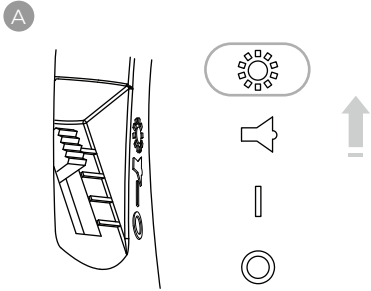

- **Choose Security Protocol (see your router details)**
- **Enter password for Wifi and press Submit**
