G-SPOT STIMULATING SERUM

G-SPOT PLEASURE GUIDE

THE DISCOVER G-SPOT GUIDE

If you have never had a G-SPOT orgasm, Discover and our easy guide will help you discover another world! All women have a G-Spot and can have an orgasm, it is simply a matter of finding it, and with a little help from this serum, a G-Spot orgasm is obtainable.

Named after the German obstetrician, Dr. Gräfenberg, the G-spot is a small bean-shaped area that lies just behind the upper front wall of a woman's vagina. This tiny one-and-a-half to two inches of area that falls right inside the vaginal opening is a hotbed of stimulative impulses, inducing orgasms galore. It can sometimes even lead to multiple orgasms during one sexual encounter!

Every woman and her partner should know how to locate the illustrious G-Spot. It is very difficult to locate the G-Spot while lying down so start by sitting. It is usually felt, about half-way between the back of the pubic bone and the cervix and feels like a small lump that swells as it is stimulated. When it is first touched many women feel like they have a need to urinate, even if the bladder has just been emptied. Using her fingers, she should explore the anterior (inside front) wall of the vagina using a firm upward pressure. She might also use firm pressure from

outside at the same time with the other hand on the abdomen just above the pubic bone. As she finds and stimulates the G-Spot and it begins to swell, she will feel it as a small lump, which will give her a distinct feeling. Some women have larger spots, but the sensation is the same regardless of its size. As she presses firmly on her G-Spot she will feel a slight urge to urinate, however, within two to ten seconds of massage, the initial reaction is replaced in some women by a strong and distinctive feeling of sexual pleasure

She should apply firmer pressure on the G-Spot than she would on the clitoris. As she continues stimulation inside the vagina, which should feel slightly to moderately pleasurable, she may feel twinges or contractions in her uterus. When the urge to urinate disappears, she should relax in a more comfortable position on your bed. *She should continue stimulating the G-Spot while kneeling or sitting on her feet with knees apart.*

A man can play an important role in supporting and initiating the female G-Spot orgasm by inserting his index and middle finger into his partner's vagina and stroking the anterior (inside front) wall with a "come here" motion. Well-trimmed fingernails can be a good idea; reasonably

strong pressure is needed. A stimulated G-Spot will feel spongy and different from the rest of the vagina. Stroking the G-Spot firmly in this way can bring on a relatively quick orgasm or several of them. The area becomes hard and firm, like an erect penis as it swells, sometimes to the size of a walnut. It can be felt between both sets of fingers, the man's stimulating through the anterior vaginal wall and the woman's pressing down on her abdomen above the pubic hair line.

Now that you have located the G-Spot it is now time to try and have a G-Spot orgasm. You can do this with penetration of a partner's fingers or penis, vibrator and a small dab of Discover serum. Apply the serum a few minutes before you start to stimulate the G-Spot.

WITH A PARTNER

Only certain positions will allow a penis to continuously stimulate the G-Spot:

Best sex position - The Female Superior Position (Fig. 1)

In the Female Superior Position she lies on top of the man with her legs on the outside of his legs. Her body is parallel with his and she is able to move around and manipulate his penis getting into areas he would never be able to do if he

were on top. While she is on top, she can kneel, squat, or sit on top of his erect penis. When she sits on his erect penis in this position, his penis penetrates very deeply and can almost always make the woman achieve an orgasm. In this variation she can sit on the man using her hands to push herself up and down as she faces his feet. She also has the option to ease back close to his chest with her legs together.

Kneeling Position (Fig. 2)

This calls for him to be sitting or kneeling with his penis inside her. The woman can have her knees pulled up to her chest with her feet flat on his chest while she rolls her hips around while stimulating her G-Spot.

Rear Entry Sex Position (Fig. 3)

The Rear Entry position, also called “**doggie style**,” is a favorite among sex enthusiasts. It does have one advantage and one disadvantage—the advantage is because of the angle and the depth of penetration, it is an excellent way to reach the G-Spot. The disadvantage is that it’s sometimes difficult to keep his penis inside her and there is no direct clitoral stimulation.

Rear Entry Sex Position involves the man kneeling behind her as she is on all fours using kneepads or pillows placed under the knees. The most common body position is the

man and woman having similar body positions, in other words, bodies as close together as possible.

Piercing Tiger Position (Fig. 4)

This exciting variation can be performed with her on her knees and forearms so that her buttocks are raised. He then kneels behind her grasping her waist and hips controlling all the action. This is a true animalistic position.

Laid Out Rear Entry Position (Fig. 5)

While performing the rear entry, she can be entered while both are standing up or lying down flat. You can even perform this position kneeling, sitting or even lying side-by-side.

Criss Cross Sex Position (Fig. 6)

This favorite is a remarkable position because it allows him to sustain intercourse for what seems to be forever and usually control climax of the man. When done properly, couple’s have experienced multiple orgasms and have even extended orgasms far beyond the norm!

To implement this sex position... sit facing each other with penis inserted. Both partners should have legs partially extended. Clasp hands and moving them out to the sides of the body, and lying back as far as possible and looking up towards the ceiling. At this point, both partners

are joined only at the hands and genitals. With little movement pleasure is sustained for quite a long time.

What will it do for her? This is guaranteed to hit her G-Spot giving her instant orgasm. Alternating of tightness and widening she will feel two types of sensations, that of deepness and that of feeling her vagina wrapped around his penis and when her legs are crossed again.

What will it do for the man? He gets to watch the action. Seeing her orgasm can guarantee that he will soon be following. He will feel the same feelings as her but have a better advantage of taking it at his own pace.

WITH A VIBRATOR

Using a vibrator, especially curved ones designed for G-Spot orgasms, Discover serum can be applied on the tip of the vibrator as well as with the finger directly on the G-Spot.

CAUTION: NOT FOR USE BY PREGNANT WOMEN OR WOMEN WITH STD. If irritation occurs, discontinue use.
