Caribou Surface Cleaning Instructions

Grease and Scuff mark removal: Grease spots, changes in sheen and surface scratches can be cleaned by following the steps outlines below.

Step 1: Soak top with pure household cleaner/degreaser. We have found good results with Lysol. Let sit for 1-2 minutes.

Step 2: Using a damp textured cloth, vigorously wipe surface in the direction of the grain.

Step 3: With a dry tea towel, dry the surface in the direction of the grain. Polish top with full length even strokes in the direction of the grain.

****PLEASE NOTE****

Caribou requires a three month "break in" period for the finish to reach its final state. Like a snake shedding its skin, Caribou's finish will settle into an extremely durable, non marking satin sheen.
