

## Instructions

### Step 1

Thread all the beads onto the wire. Wind the end of the wire around the bar of the plastic comb, then bring up a bead from the wire and place it on top of the bar.

### Step 2

Wind the wire around the comb again between the teeth, bringing up another bead. Twist the wire a couple of times behind the bead so that the bead sits higher, then bring another bead up and place it on the bar, winding the wire around the neck between the teeth again. Continue in this manner across the length of the comb. To finish wind the wire around the end of the comb and cut off.
