

how to  
make

Terrarium jars

#A353

## YOU WILL NEED

- Swing top storage jar
- Gravel
- Charcoal
- Dirt
- Small plants (succulents work well)
- Small rocks or decorator pebbles

Place the gravel in jar the jar first, and cover with a layer of charcoal.

Cover the charcoal with a layer of dirt, position your plants, and arrange a few rocks and pebbles around the plants.

Insert a plastic animal if you wish, and give your terrarium a light spray with water. Be careful not to overwater.

You may keep the lid closed, but do it open it from time to time to allow condensation to escape. Water when needed.
