NEXTGEN 3000™ STANDARD BASE

PRODUCT FLIER

The NextGen 3000™ Standard Guardrail Base with Hitch-pins represents the ultimate free-standing fall protection system. The bases are the lightest guardrail base in the United States at 58 lbs. and do not penetrate the roof membrane or substrate. They are extremely durable and are available in galvanized steel or TS22 coating. The installation time is reduced by over 30% because one person can comfortably carry two bases. The toe board slots and handle holes allow easier lifting, reducing the risk of soft tissue injuries on the job site. These base plates nest and stack easily with one another.

KEY FEATURES

- Patented
- Lightest Base Plate At 58 Lbs.
