ADVANCED ANTIMICROBIALS

The smarter cleaning system.

With an estimated 80% of infectious diseases occurring because of contact spread through hands and surfaces*, our world is in serious need of a new standard when it comes to cleaning and sanitation.

Traditional disinfectants and sanitation products are only doing half the job we need them to – while they may kill germs on the surface, they do absolutely nothing to defend against what is to come. They clean and disinfect, but offer no ongoing protection.

That's where SIQURA™ comes in. Designed with our world leading QuatLock™ technology SIQURA™ Hospital Grade Disinfectant and Protectant offers long-lasting defence against germs.

It cleans, disinfects AND protects.

- 1 CLEAN**
Cleaning is the physical removal dirt, germs and grime from surfaces.
- 2 DISINFECT**
Disinfection kills unwanted bacteria and viruses.
- 3 PROTECT**
QuatLock™ technology creates a self-sanitising surface that kills microbes for up to 30 days on low touch surfaces and 24hrs in high touch areas.

SIQURA™ products can be used alone, together or integrated into existing cleaning protocols to support a wholistic infection control strategy.

Advanced antimicrobials

SIQURA™'s innovative product range includes a **Hospital Grade Surface Disinfectant** that provides long lasting protection against germs alongside a **Neutral Multi-Surface Cleaner** designed for intermittent cleaning. Together they form a complete cleaning, disinfection and protection system that supports a healthier environment.

Clean Disinfect & Protect

SIQURA™ Hospital Grade Surface Disinfectant & Protectant destroys bacteria and locks onto surfaces to provide 24hrs of active defense on high touch surfaces and up to 30 days on low touch areas. It kills 99.999% of bacteria and is effective against viruses* including COVID-19.

Application methods:

- Spray & Wiping
- Misting
- Pre-moistened cloths

Ideal for Intermittent Cleaning

SIQURA™ Multi Surface Cleaner & Protectant is a specifically formulated neutral multi-surface detergent designed to break down biofilms, clean surfaces and extend the life of SIQURA™ Hospital Grade Disinfectant and Protectant. It is ideal for intermittent cleaning between regular disinfection cycles.

Application methods:

- Spraying
- Wiping

SIQURA™ uses our world-leading QuatLock™ technology to form a defensive shield on the surfaces it is applied to. Once bonded the QuatLock™ doesn't leave the surface or deplete in microbial efficacy. Unlike many antimicrobials, the QuatLock™ layer is not consumed during disinfection, meaning that surfaces remain cleaner for longer.

*SIQURA™ Hospital Grade Surface Disinfectant & Protectant is effective against a broad range of bacteria and viruses such as Human Coronavirus E229 (including COVID-19), Murine Hepatitis Virus (MHV), Staphylococcus aureus, Enterococcus hirer, Escherichia coli, Pseudomonas aeruginosa and Salmonella choleraesuis.

SIQURA™ Hospital Grade Surface Disinfectant & Protectant (75HG)

SIQURA™ Hospital Grade Surface Disinfectant & Protectant destroys bacteria and locks onto surfaces to provide 24hrs of active defense on high touch surfaces and up to 30 days on low touch areas. It kills 99.999% of bacteria and is effective against viruses* including COVID-19.

Most disinfectant products evaporate within a short period of time, leaving surfaces vulnerable to recontamination. **SIQURA™ 75HG** is a three-in-one solution. It **cleans, disinfects** and then remains bonded to create a **self-sanitising** surface that continues to defend against bacterial attack.

Ready to use Liquid

SIQURA™ 75HG is a simple and effective way to disinfect and protect almost any surface. Application of SIQURA™ 75HG will disinfect and establish a polymer matrix on the surface for ongoing protection. These products are ready to use and must not be diluted.

Read the Label

Read the label and safety data sheet before use. Always use product as directed in technical data sheet or according to established industrial protocols.

Precautions when handling

Keep out of reach of children. Read label before use. Store in securely in tightly sealed original container. When product has been used, triple rinse empty container and recycle.

*SIQURA™ Hospital Grade Surface Disinfectant & Protectant is effective against a broad range of bacteria and viruses such as Human Coronavirus E229 (including COVID-19), Murine Hepatitis Virus (MHV), Staphylococcus aureus, Enterococcus hirer, Escherichia coli, Pseudomonas aeruginosa and Salmonella choleraesuis.

easy-to-use rapid action

Spraying 75HG

Direct spraying is a simple way to clean, disinfect and protect surfaces.

1

Prepare

If SIQURA 75HG is in bulk containers, decant liquid into a suitable trigger spray bottle, ready for application.

2

Clean

- For optimal performance and durability, surfaces should be clean and free from visible contaminants that may prevent the product from making full contact with the surface.
- If surfaces are visibly dirty you can **pre-clean** them using either SIQURA Hospital Grade Disinfectant and Protectant or SIQURA Neutral Multi Surface Spray.
- It's also important to protect sensitive equipment that may be affected by moisture. Cover ventilation slots on electrical equipment.

3

Spray

- Using a spray bottle, spray SIQURA Hospital Grade Disinfectant and Protectant in a fine mist directly onto the surface.
- It's important to ensure an even moist covering at a rate of approximately 40m² per litre of product.

4

Wait

- Wait for 60 seconds — surfaces must be left after application so as to be effective against bacteria & viruses.*
- After 60 seconds you may wipe in an 'S' pattern but ensure that the surface remains damp. Allow product to air-dry so as to establish the QuatLock™ surface matrix.

5

Repeat

- Work methodically through each room applying directly to surfaces. Pay special attention to touch points including door handles, chairs, tables, phones, keyboards and taps.

Misting 75HG

Electrostatic directional spraying is suitable for larger environments.

1

Prepare

- Decant liquid into electrostatic directional sprayer.
- Always uses appropriate PPE when fogging to avoid inhalation of fine particles.

2

Clean

- For optimal performance and durability, surfaces should be clean and free from visible contaminants that may prevent the product from making full contact with the surface.
- If surfaces are visibly dirty you can **pre-clean** them using either SIQURA Hospital Grade Disinfectant and Protectant or SIQURA Neutral Multi Surface Spray.
- It's also important to protect sensitive equipment that may be affected by moisture. Cover ventilation slots on electrical equipment.

3

Mist

- Follow operational directions of your electrostatic spraying machine.
- Do not mist into the air and hope that surfaces are covered – rather, work methodically across all surfaces through each room.
- Recommended particle size for fogging is 20 microns ensuring an even moist covering at a rate of 30-40m² per litre of product.

4

Wait

- Wait for 60 seconds – surfaces must be left damp after application so as to establish a surface matrix and be effective against bacteria & viruses.*

Pre-Moistened Cloths 75HG

Pre-moistened cloths can clean, disinfect and protect a surface in one step.

1

Prepare

- Decant SIQURA Hospital Grade Disinfectant & Protectant into bucket or container of choice.

2

Clean

- For optimal performance and durability, surfaces should be clean and free from visible contaminants that may prevent the product from making full contact with the surface.
- It's also important to protect sensitive equipment that may be affected by moisture. Cover ventilation slots on electrical equipment.

3

Wipe

- Soak a clean cloth in 75HG.
- Squeeze out excess moisture (so it's not dripping).
- Apply cloth directly to the surface and wipe methodically in an "S" motion, ensuring that the entire surface is covered.
- Do not wipe in circles or back and forth.
- Regularly change the cloth if it becomes soiled.

4

Wait

- Wait for 60 seconds — surfaces must be left damp after application so as to establish a surface matrix and be effective against bacteria & viruses.*

SIQURA™ Neutral Multi Surface Cleaner & Protectant (MS15)

SIQURA™ Multi Surface Cleaner & Protectant (MS15) is a specifically formulated neutral multi-surface detergent designed to break down biofilms, clean surfaces and extend the life of SIQURA™ Hospital Grade Disinfectant and Protectant. MS15 is ideal to use on most surfaces including aluminium, steel and plastic.

MS15 contains colloidal surfactants. These 'surface-active agents' are designed to lower the surface tension between two substances. They work on a macromolecular level to clean dirt, spillages, oils and other matter by dislodging them from the surface. MS15 also contains SIQURA™ QuatLock™ which boosts the protective shield created by 75HG.

SIQURA™ MS15 and 75HG work together as a system. 75HG disinfects and uses QuatLock™ technology to lock onto surfaces and create a self-sanitising surface that continues to defend against bacterial attack. MS15 can then be used for routine general cleaning in between disinfection cycles.

Ready to use Liquid

SIQURA™ MS15 is premixed and ready for use.

Read the Label

Read the label and safety data sheet before use. Always use product as directed in technical data sheet or according to established industrial protocol.

Precautions when handling

Keep out of reach of children. Read label before use. Store in securely in tightly sealed original container. Triple rinse empty container and recycle.

breaks down biofilms

suitable for most surfaces

easy-to-use rapid action

Spray & Wipe MS15

SIQURA Neutral Multi Surface Cleaner and Protectant can be used as a spray and wipe or with pre-moistened cloths.

1

Prepare

- If using bulk quantities, decant SIQURA Neutral Multi Surface Cleaner and Protectant into a container of choice or into a trigger spray bottle, ready for application.

2a

Spray & Wipe — with spray bottle

- Spray surfaces
- Wipe methodically in an “S” motion, ensuring that the entire surface is covered.

2b

Soak & Wipe — with pre-moistened cloths

- Soak a clean cloth in MS15.
- Apply cloth directly to the surface and wipe methodically in an “S” motion, ensuring that the entire surface is covered.
- Do not wipe in circles or back and forth.
- Regularly change the cloth if it becomes soiled.

Applications

Versatile Use

The **SIQURA™** cleaning system a versatile set of products suitable for use in healthcare, childcare, education, commercial and domestic environments. They have been designed to be easily integrated into existing cleaning protocols to support a holistic infection control strategy. The products are suitable for walls, floors, doors, windows and other potential applications include:

Healthcare

Hospitals, GP Clinics, Allied Health Practices, Residential Care.

Applications:

Surfaces & Fixtures
Nurses Stations
Patient Transport
Waiting / Staff Rooms

Education

Childcare, Schools, Universities, Vocational Training Facilities.

Applications:

Desks & Chairs
Surfaces & Fixtures
Childcare Toys & Equipment
General Equipment
(Sports, IT, training)

Hospitality

Restaurants, Cafes, Kitchens, Food Courts, Hotels.

Applications:

Tables & Chairs
Counters & Bars
Food Prep Areas
Surfaces & Fixtures
Bathrooms

Public Transport

Trains, Trams, Buses, Taxis & Ride Share Services.

Applications:

Doors & Buttons
Seats & Handles
Driver Cabins
Driving Equipment

Vehicles & Transport

Trucks, Vans, Passenger Vehicles.

Applications:

Doors & handles
Steering Wheels
Equipment
Driver Cabin

Manufacturing

Factories, Distribution Centres, Manufacturing Plants.

Applications:

Shared Equipment
Surfaces & Fixtures
Staff Rooms
Desks & Chairs

Retail

Shopping Centres, Supermarkets, Boutique Stores, Food Courts.

Applications:

Counter Tops
Eftpos Machines
Bathrooms
Change Rooms
Staff Rooms

Commercial & Offices

Offices, Call Centres, Kitchen, Bathroom, Waiting Rooms.

Applications:

Door Handles & Fixtures
Furniture
Floors
Benchtops
