

Begin your child's journey
to better hearing.

Hear now. And always

As the global leader in implantable hearing solutions, Cochlear is dedicated to bringing the gift of sound to people with moderate to profound hearing loss. We have helped over 450,000 people of all ages live full and active lives by reconnecting them with family, friends and community.

We aim to give our recipients the best lifelong hearing experience and access to innovative future technologies. For our professional partners, we offer the industry's largest clinical, research and support networks.

That's why more people choose Cochlear than any other hearing implant company.

Hear now. And always

LET THEM HEAR THROUGH SOUNDARC.

If your child has hearing loss, it is important to seek treatment as early as possible. You want what's best for your child – for them to focus on learning and socialising, and not be held back by hearing loss.¹

The Cochlear™ Baha® System is a hearing implant for children with conductive hearing loss, mixed hearing loss or single-sided deafness (SSD). It uses the body's natural ability to conduct sound through bone conduction and can have an immediate impact on how well your child can hear and communicate.

If your child is too young or not ready for a surgical implant, they may be able to experience the benefits of the Baha System using the Cochlear Baha SoundArc; an exciting, new hearing device that lets children hear like never before.

LOOKS GOOD, SOUNDS BETTER.

The Baha SoundArc has a modern look that kids love. It's lightweight, practical and, like a pair of sunglasses, easy to put on and take off. It fits securely and comfortably in place so you can feel confident it will stay on, even when your child is out running, jumping and playing with friends.

Baha SoundArc with a Baha 5 Sound Processor.

The SoundArc works with our full range of advanced Baha 5 sound processors. They connect to the SoundArc and provide young children with the amplification they need to facilitate language development on par with their hearing friends.²

Rated **4/5** in speech understanding, sound quality & ease of use.³

In the United States and Canada, the placement of a bone anchored implant is contraindicated in children below the age of 5.

GIVE YOUR CHILD A FRONT ROW SEAT.

The Baha 5 Sound Processor is the industry's smallest – 20% smaller than any other sound processor.⁴ And it's the smartest. For the first time in an implantable hearing system the sound processor features Made for iPhone technology. This lets your child stream sound directly from iPhone and iPad devices!

Using a Baha 5 Sound Processor also means having access to great wireless accessories. The FM compatible Mini Microphone 2+ bridges the gap between your child and the teacher to give them a front row seat in the classroom.
