

Apple Camera - iOS

Video App with Sound Recording – sample rate 44.1kHz, output file in compressed format.

www.apple.com

Here you see the Main Screen of the Apple standard camera App. It's a very simple "point and shoot" App that records sound in stereo using SonicPresence's SP15C Spatial Microphone. Unfortunately, there is no indication on the screen of any kind that there is sound. There's no meter nor is there any Mic Volume control. The only way to tell if you have stereo audio is to shoot some footage and then play it back on headphones.

This App has very limited video controls and sometimes exhibits unpredictable behavior for audio. Make sure you put your iPhone in Airplane mode to avoid disruptions due to phone calls and message notifications.
