

WOUNDS: HOW MANUKA HONEY WORKS ON WOUNDS

While the anti-bacterial and antiseptic properties of regular honey have been appreciated across the globe, **manuka honey works in a similar but superior way.**

Manuka Honey is fast acquiring a formidable reputation as a remedy for the **treatment of wounds, abrasions, cuts and scars.**

The MGO in this honey play the role of healer-warrior **fighting against germs and limiting their presence on the wound surface** or in facial cold sores.

HOW TO APPLY MANUKA TO A WOUND

Some doctors have begun using it in clinical settings as it has proved to be effective in treating simple and painful wounds in controlled tests.

Bandages soaked in raw and highly potent manuka are applied on wounds, in particular wounds and cuts that result from infections and injuries. The U. S. Food and Drug Administration (FDA) has recently approved these infused bandages for prescription and over-the-counter sales.

The powerful antimicrobial compounds – methylglyoxal and hydrogen peroxide – work on the wound in a dual treatment mode. It disinfects the wounds and draws away moisture. In doing so, it prevents existing bacteria from thriving and new bacteria from re-infecting your cut or sore.

In addition to this, the low pH levels of honey and the presence of sugars (glucose and fructose)

hamper the spread of bacteria in your skin. This gives your wound time to heal and new tissue to form over the dead cells.

Astoundingly, strong MGO activity in manuka encourages healing at a much faster rate than expected from a natural remedy. The purity and potency of the honey you use will have a bearing on the restorative process.

Severe cuts, scarring and skin conditions would require the presence of higher levels of MGO in manuka for the treatment to be effective.

For this reason, we recommend medicinal and superior-grade Manuka honey for reduced symptoms and distinct signs of healing. Our [Manuka Honey MGO 1717+](#) gently sanitizes the wound, soothes the pain and inflammation, and promotes rapid healing.

MEDICINAL MANUKA HONEY - MGO GRADES EXPLAINED

Premium medicinal Manuka honey is defined as high-grade MGO Manuka honey that is scientifically tested for its curative compounds such as antioxidants, bioflavonoids and immune boosting enzymes.

This honey presents higher levels of MGO (Methylglyoxal) when compared to table-grade Manuka honey and is

naturally bio-active with anti-bacterial, antimicrobial, antiseptic, and anti-inflammatory properties for the holistic prevention and treatment of various health ailments.

Commonly known uses include: burns, wounds, infection, oral care, ulcers, gut health, cold & flu, sore throat, cough, immunity building, general wellbeing, and beauty and skincare.

The higher the MGO number of the Manuka Honey, the stronger its antimicrobial bioactivity levels and the more potent the natural medicinal benefits.

The MGO levels of Biosota's high strength medicinal Manuka honey ranges are regularly tested and verified authentic by independent accredited laboratories both in Australia and New Zealand.

MANUKA HONEY AIDS IN THE HEALING OF SCARS.

For medicinal use and to treat ordinary wounds and scarring, Manuka Honey should possess minimum activity. Some varieties are stronger than others in terms of MGO content and antibacterial activity.

The antioxidants in Manuka have an important role to play in reducing the intensity of age and stress-related spots. Regular application of manuka on surgery scars can help diminish the mark and allow it to fade off.

Looking to get rid of those blemishes on your face? Add our [Biosota Manuka Honey MGO 1717+](#) to your medicine box as it makes a perfect natural topical antiseptic and cleanser.

MEDICINAL MANUKA HONEY

HOW TO USE AND APPLY MEDICINAL MANUKA HONEY
