

## Flexible Temporary Mold

InstaMold allows for the most perfect reproductions of all 3 dimensional objects and shapes in a matter of minutes. The clever temporary mold making compound is activated by water. Flexible InstaMold makes an exact replica including the finest of detail. InstaMold is completely harmless to use for body casting and the material will not adhere to the originals you are casting. Once you have your completed your mold you can then make numerous copies using Art Plaster, PermaStone, resin, wax or other casting compounds.

## InstaMold Mixing Instructions

(Measure by Volume)

### Thick Strong Mix

Mixing Proportions: 1 part InstaMold : 2 Parts Water

Characteristics: Greater Volume of Mix  
Slow Setting  
Average Retention of shape & size  
Withstands average handling  
Retains fine detail

Setting time at 70F: 4 - 6 Minutes

When to use: General Use

### Medium Average Strong Mix

Mixing Proportions: 1 part InstaMold : 3 Parts Water

Characteristics: Greatest Volume of Mix  
Slowest Setting  
Less accurate retention of shape  
Should be handled more carefully  
Retains fine detail

Setting time at 70F: 8 - 12 Minutes

When to use: When you need a bigger batch for a large model and more time in which to work.  
Care is needed to retain fine detail.

**Note:** One average package of InstaMold (12oz, by weight) contains a Volume of about 40 ounces. This will mix with 40-120 ounces of water.
