TPS25: Pump Quick Fix Guide

1 Start the engine and keep it in idle.

2 Using a 10mm socket wrench, loosen the 4 bolts on the right & left sides of the pump.

3 Loosen the left screw on the left side.

4 Loosen the right screw on the left side.

5 Loosen the left screw on the right side.

6 Loosen the right screw on the right side. Look for water to begin flowing through the tubes.
