

Lightwood / CHAIR • ARM CHAIR • BAR STOOL

An elegant simple wood chair. Although it looks rather delicate, this chair features a structure incorporating subtle details and has passed ISO strength tests to provide for use in a wide range of settings from the home to contract applications. You can choose from a wide variety of seats including mesh, webbing, fabric and leather. This chair provides both functional beauty and luxury compatible with this wide variety of seats. It not only can be used as a booster seat, but it also has an elegant form even when not in use.

DESIGN

JASPER MORRISON , 2011

"Like many previous chair projects I have designed the Lightwood Chair is about structure, making use of the unbeatable craftsmanship of Maruni's wood technology to achieve a light wooden structure. This can be completed with a variety of different solutions for the seat, starting with the lightest, a white mesh, which leaves the structure partially visible, then a woven webbing which reminds us of shaker furniture, except that it's a synthetic webbing which makes an interesting contrast with the wood, and then the more traditional upholstered seat in fabric or leather, which provide extra comfort and can be removed for cleaning. It's a contract chair which is equally suitable to the home."

MATERIAL & FINISH

maple

C-0 clear ND-1 * natural red NK-1 natural black EA-1 mat white

oak

C-0 clear NL-0 whitish NK-1 natural black

ash

C-0 clear NK-1 natural black

*ND-1 is not available for mesh seat.

WARRANTY

We will guarantee the product for two years from the date of delivery of the product. For the content of quality assurance please see the "Warranty Policy" included in the product.

TESTS

ISO7173-L4 / Determination of strength and durability

ISO7174 / Determination of stability

TECHNICAL INFORMATION

WOOD

The wood used in this product is obtained from maple, oak or ash trees in North America that are managed and felled in a planned manner. If required, we can manufacture furniture with the FSC® or PEFC™ certification. In that case, however, longer lead-time will be required to procure the wood.

UPHOLSTERY

The Chair (webbing seat) is woven from nylon tape and tightened over the surface. The Chair (cushioned) is made of fabric springs combined with urethane foam. The Chair (mesh seat) is made of a flame resistant material that consists of polyester base seat coated with PVC.

GLIDE

The leg tips can be equipped with polyethylene gliders, which are sold separately. You can choose between felt and plastic bottom parts.

VOC

We use paints, adhesives and plywood that suppresses VOC emissions in manufacturing processes and finished products. These materials are subjected to formaldehyde emission test JIS A 1460 and have cleared the emission value of 0.4 mg / l or less.

FLAME RESISTANCE

The Chair (cushioned) meets the requirements of BS5852 Source 5 with a special order. The Chair (mesh seat) meets the requirements of BS5852 part 1 as a standard feature.

PURPOSE OF USE

Indoor

*For contract use, it is necessary to install brackets that are sold separately.

Maruni Wood Industry has established various test standards and designs for comfortable use, however, use of products beyond the expected scope can lead to cracking and snapping of wood parts. There are several things you should keep in mind in order to properly preserve the product and continue using it for a long time. Therefore, be sure to read the instruction manual beforehand.
