LOVE YOUR BACK

## Revolutionary By Design: ErgoPro

Ergonomic, eco-friendly solutions for your body.

### The Science Behind the Seat

On a traditional seat when we feel pressure on our sit bones we tip the pelvis for relief causing slouching, which can lead to strain, and eventual pain or injury to the spine.

Optimal posture, as supported by the Owl Stool's unique ergonomics, encourages a "no slouching" natural alignment for the spine, by relieving sit bone pressures.

Owl Furniture is now offering the ErgoPro Owl. The **patented** new design is an injection molded seat from post-consumer plastic and wood composites. Active sitting solutions are available for businesses and homes, in 18"-24" (regular), and 20"-30" (tall) heights, and four color options. BIFMA tested and endorsed by health practitioners.

*"The Owl Stool is built on sound principles of body mechanics and supports a healthy 'neutral' for the pelvis in sitting."* -Thomas Meyers, Director, Anatomy Trains

### OUR MISSION

The Mission of Owl Furniture is to combine imaginative design, craftsmanship, and smart production practices with the science of human scale ergonomics and technology to produce unique and beautiful furniture solutions that support healthy and contemporary lifestyles. Passion for contributing to our community through relationship building with our employees, vendors, and customers, while inspiring environmental awareness guides our business.
