

DOUBLE TAP

The potency of a second-generation anticoagulant without the risks

Double Tap 6g

Double Tap 12g

Double Tap 28g

For the control of Possums & Rats

PRODUCT FEATURES

- Double Tap Pellet Bait is unique, cost effective, highly palatable and combines the environmentally friendlier features of a 1st generation anticoagulant with the naturally occurring substance Vitamin D3 (Cholecalciferol) to produce a bait that has the efficacy of 2nd generation anticoagulants, without their well-documented environmental persistence.
- Each bait contains 0.05g/kg of Diphacinone and 0.60g/kg of Cholecalciferol
- Double Tap is effective at killing possums and rats with a similar potency to brodifacoum baits but without residue concerns.
- 28g blocks is primarily designed to be used in fixed rat bait stations
- Used by the Department of Conservation and other leading conservationists and pest controllers
- Suitable for indoor and outdoor use in bait stations
- No Controlled Substance Licence (CSL) required

SAFETY FOR HANDLERS

- Use in accordance with the Safety Data Sheet for Double Tap

HISTORY

- CONTROLLING POSSUMS & RATS IN NEW ZEALAND SINCE 2019

ACTIVE INGREDIENT

DIPHACINONE – 0.05G/KG
 CHOLECALCIFEROL (VITAMIN D3) – 0.60G/KG

PRODUCTS FORMATS

- SIZE: 6g, 12g, 28g
- PAILS OF 2KG, 4.5KG, 10KG

ENVIRONMENTAL IMPACT

The 1st generation anticoagulant in Double Tap (Diphacinone) is metabolised relatively quickly meaning it is less likely to bioaccumulate and put our non-target species at risk. If game species are exposed to bait, they will void these compounds quickly. Cholecalciferol is readily metabolised and does not persist in the environment.

HOW TO USE

- For use in bait stations
- For more information see our Safety Data Sheet:
www.connovation.co.nz/safety-data-sheets
