Defect: The products do not comply with the [mandatory safety standard for products containing button/coin batteries](#).

The battery compartment does not contain a captive screw designed to ensure the compartment is resistant to being opened by children.

Hazard: A battery compartment that does not contain a captive screw can result in the screw being lost. When a battery compartment is not adequately secured, one or more button batteries may be easily accessible.

If young children gain access to button batteries and ingest them, they are likely to suffer severe internal burn injuries, which can result in serious injury or death. Button batteries also pose a choking hazard to young children.

What to do: Consumers should stop using the product immediately and store it in a safe place out of reach of children. Consumers should return the product to the place of purchase for a replacement.
