Specs

DIMENSIONS: 70mm x 112mm x 47mm (23.8" x 44" x 18.7")with knobs

WEIGHT: 217g (.48 lbs.)

BYPASS: True Bypass

POWER REQUIREMENTS: 9V to 18V DC Center Negative

CURRENT DRAW: 12.5 mA

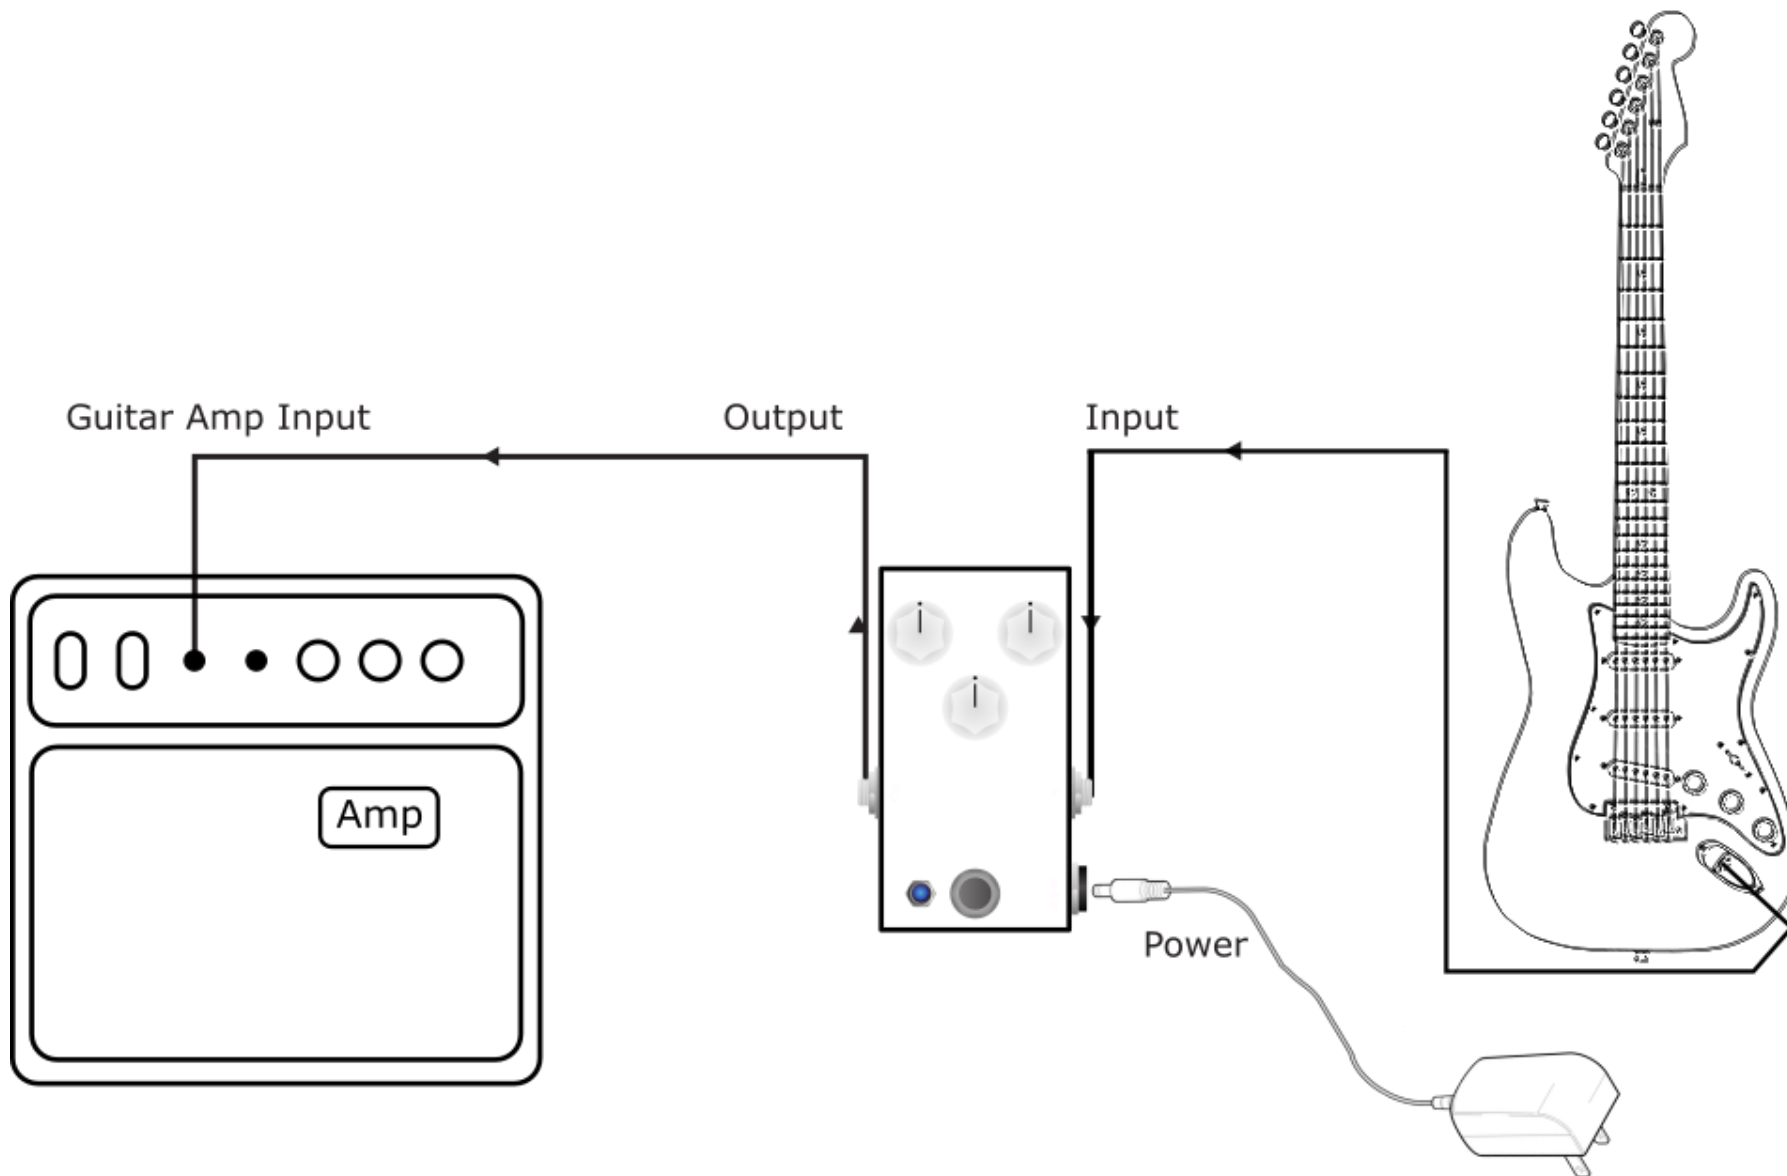

Power Supply

Vick Audio pedals can be powered by a 9V to 18V DC negative tip power supply with a standard Boss style 2.1mm connector (not included). Any voltage between 9 and 18 volts is fine.

Current supply should be a minimum on 25 mA to include a safety margin for the DC power adapter.

Please make sure to use a good quality power supply designed to be used with guitar pedals. Generic power adapters can induce a large amount of unwanted noise to the audio signal. Boss and 1Spot both make excellent adapters.
